<th>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</th>
</tr>
</thead>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning Scheme Policy - Integrated Design (Appendix C) for easement requirements over open channels.

PO

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

No example provided.

PO

Council is provided with accurate representations of the completed stormwater management works within residential developments;

E

"As Built" drawings and specifications of the stormwater management devices certified by an RPEQ is provided.

Note - Documentation is to include:

- photographic evidence and inspection date of the installation of approved underdrainage;
- copy of the bioretention filter media delivery docket/quality certificates confirming the materials comply with specifications in the approved Stormwater Management Plan;
- date of the final inspection.

Site works and construction management

PO34

The site and any existing structures are maintained in a tidy and safe condition.

No example provided.

PO35

All works on-site are managed to:

- minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- minimise as far as possible, impacts on the natural environment;
- ensure stormwater discharge is managed in a manner that does not cause actionable nuisance or annoyance to any person or premises;

E35.1

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash removal devices designed in accordance with the Urban Stormwater Quality Planning Guidelines, State Planning Policy, Schedule 10 - Stormwater management design objectives, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
| d. | avoid adverse impacts on street trees and their critical root zone. |
| b. | stormwater discharged to adjoining and downstream properties does not cause scour and erosion of any kind; |
| c. | stormwater discharge rates do not exceed pre-existing conditions; |
| d. | the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and |
| e. | the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins. |
| f. | minimum design storm for all temporary diversion drains and sedimentation basins in accordance with Schedule 10 - Stormwater management design objectives; |
| g. | ponding or concentration of stormwater does not occur in adjoining properties. |

35.2

Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

E35.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

E35.4

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

**PO37**

All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

**E37.1**

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**E37.2**

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

**E37.3**

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

**E**

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

**E**

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.
### PO38

All disturbed areas are **to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised** at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

### E38

At completion of construction all disturbed areas of the site are to be:

- **topsoiled** with a minimum compacted thickness of fifty (50) millimetres;
- **grassed** stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

### PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ESCP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).

### E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

### PO39

The clearing of vegetation on-site:

- is limited to the area of infrastructure works, building areas and other necessary areas for the works; and
- includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;
- is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

### E39.1

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

### E39.2

Disposal of materials is managed in one or more of the following ways:
<table>
<thead>
<tr>
<th>PO</th>
<th>All development works are carried out at times which minimise noise impacts to residents</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or</td>
</tr>
<tr>
<td></td>
<td>b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.</td>
</tr>
</tbody>
</table>

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

<table>
<thead>
<tr>
<th>E</th>
<th>All development works are carried out within the following times:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;</td>
</tr>
<tr>
<td></td>
<td>b. no work is to be carried out on Sundays or public holidays.</td>
</tr>
</tbody>
</table>

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

| PO40 | Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council. |

No example provided.

<table>

</tbody>
</table>

| E41.1 | All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary. |

| E41.2 | Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters. |

<p>| E41.3 |  |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>f.</strong></td>
<td>existing fill and soil contamination that may exist on-site;</td>
</tr>
<tr>
<td><strong>g.</strong></td>
<td>the stability and maintenance of steep rock slopes and batters;</td>
</tr>
<tr>
<td><strong>h.</strong></td>
<td>excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).</td>
</tr>
</tbody>
</table>

Note: Filling or excavation works are to be completed within six months of the commencement date.

|   | Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ. |
| **E41.4** | All fill batters steeper than 1 (V) in 6 (H) on residential lots are fully turfed to prevent scour and erosion. |
| **E41.5** | All filling or excavation is contained on-site and is free draining. |
| **E41.6** | All fill placed on-site is: |
|   | a. limited to that area required for the necessary for the approved use; |
|   | b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill. |
| **E41.7** | The site is prepared and the fill placed on-site in accordance with AS3798. |
|   | Note: The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures. |

**PO42**

Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

| **E42** | Any embankments more than 1.5 metres in height are stepped, terraced and landscaped. |
| **Figure - Embankment** | |

**PO43**

Filling or excavation is undertaken in a manner that:

<p>| <strong>E43.1</strong> | No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity. |</p>
<table>
<thead>
<tr>
<th>a. does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;</th>
<th>Note - Public sector entity is defined in Schedule 2 of the Act Sustainable Planning Act 2009.</th>
</tr>
</thead>
</table>
| b. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes. | E43.2
Filling or excavation that would result in any of the following is not carried out on-site:

a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Sustainable Planning Schedule 2 of the Act 2009. |

**PO**

Filling or excavation does not cause any adverse impacts on utility services or on-site effluent disposal areas.

**E**

The area subject to filling or excavation does not contain any utility services.

**E**

The distance between the top water level of a private dam and the irrigation area of a household sewage treatment plant (secondary treatment) is 30.0 metres.

**E**

The distance between the top water level of a private dam and the irrigation area of a septic trench (primary treatment) is 50.0 metres.

Note - Refer to the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2017 where contained within water resource area and water supply buffer area.

**PO44**

Filling or excavation does not result in land instability.

No example provided.
Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

<table>
<thead>
<tr>
<th>PO45</th>
<th>No example provided.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Development</strong> Filling or excavation does not result in:</td>
<td></td>
</tr>
<tr>
<td>a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;</td>
<td></td>
</tr>
<tr>
<td>b. increased flood inundation outside the site;</td>
<td></td>
</tr>
<tr>
<td>c. any reduction in the flood storage capacity in the floodway;</td>
<td></td>
</tr>
<tr>
<td>d. and any clearing of native vegetation.</td>
<td></td>
</tr>
</tbody>
</table>

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

<table>
<thead>
<tr>
<th>PO</th>

</table>

| Retaining walls and structures |
| PO46 | E46 |
| All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents. |
| Earth retaining structures:- |
|a. are not constructed of boulder rocks or timber; |
Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

b. where height is no greater than 900mm, are provided in accordance with Figure—Retaining on a boundary:

Figure—Retaining on boundary

[Diagram showing retaining wall with dimensions and setbacks]

Note: Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;

d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal; terraced; landscaped and drained as shown below:

Figure—Cut

[Diagram showing stepped retaining wall]

Figure—Fill

[Diagram showing terraced retaining wall]

Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

    OR

    result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

    i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

    ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
Figure - Filling or Excavation

PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

E

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;

c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:

i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or

ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or

iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or

iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.
AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO47

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E47.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E47.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

**E47.3**

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment*.

---

**PO48**

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

---

**E48**

For development that contains on-site fire hydrants external to buildings:

- a. those external hydrants can be seen from the vehicular entry point to the site; or
- b. a sign identifying the following is provided at the vehicular entry point to the site:
  - i. the overall layout of the development (to scale);
  - ii. internal road names (where used);
  - iii. all communal facilities (where provided);
  - iv. the reception area and on-site manager’s office (where provided);
  - v. external hydrants and hydrant booster points;
  - vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- a. in a form;
- b. of a size;
- c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.
PO49
Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

E49
For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific criteria

Dwelling house\(^{(22)}\) - Secondary dwelling

PO50
Secondary dwellings:

- a. are subordinate and ancillary to the primary dwelling in size and function;
- b. are not larger than 100m\(^2\) GFA;
- c. have the appearance, bulk and scale of a single dwelling from the street;
- d. maintain sufficient area for the siting of all buildings, structures, landscaping and car parking spaces for the dwelling house\(^{(22)}\) on-site.

E50.1
The siting and design of dwellings ensures that the secondary dwelling is:

- a. not located in front of the primary dwelling;
- b. annexed to (adjoining, below or above) or located within 50m of the primary dwelling (excluding domestic outbuildings);
- c. accessed from the existing driveway giving access to the Dwelling house\(^{(22)}\).

Note - The requirements to locate a Secondary dwelling within 50m of the primary dwelling is measured from the outermost projection of the primary dwelling (being the main house, excluding domestic outbuildings) to the outermost projection of the Secondary dwelling. The entire Secondary dwelling does not need to be contained within the specified distance.

E50.2
No more than 1 secondary dwelling is located on an allotment.

E50.3
The GFA of the secondary dwelling does not exceed 100m\(^2\).

Dwelling house\(^{(22)}\) - Domestic outbuildings

PO51
Domestic outbuildings and car ports are:

- a. of a height that does not negatively impact the visual amenity of adjoining properties;
- b. located on-site to not dominate the streetscape.

E51
Domestic outbuildings:

- a. have a total combined maximum roofed area as outlined below:
### Table 6.2.3.2.1.3

<table>
<thead>
<tr>
<th>Size of lot</th>
<th>Max. Roofed Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 600m²</td>
<td>50m²</td>
</tr>
<tr>
<td>600m² - 1000m²</td>
<td>70m²</td>
</tr>
<tr>
<td>Greater than 1000m² - 2000m²</td>
<td>80m²</td>
</tr>
<tr>
<td>Greater than 2000m²</td>
<td>150m²</td>
</tr>
</tbody>
</table>

b. have a maximum building height of 4m and a mean height not exceeding 3.5m;

c. are located behind the main building line and not within primary or secondary frontage or trafficable water body setbacks.

Note - For c. above to determine the main building line a trafficable water body boundary is to be treated the same as a secondary frontage.

---

### Home based business

**PO52**

Home based business(s)\(^{(35)}\):

a. Are subordinate in size and function to the primary use on the site being a permanent residence;

b. Are of a scale and intensity that does not result in adverse visual or nuisance impacts on the residents in adjoining or nearby dwellings;

c. Store no more heavy vehicles, trailer and motor vehicle on-site, as follows:
   
   i. 1 heavy vehicle;
   
   ii. 1 trailer;
   
   iii. Up to 3 motor vehicles.

d. Results in a vehicular and pedestrian traffic generation consistent with that reasonably expected in the surrounding low density, low built form and open area character and amenity anticipated in the precinct;

e. Are suitably screened to ensure adverse visual impacts on the residents in adjoining or nearby dwellings are minimised;

f. Sufficiently separated from adjoining properties so development does not result in adverse visual, noise or nuisance impacts on adjoining residents

**E52.1**

Home based business(s)\(^{(35)}\) having a maximum total use area is 100m², are fully contained within a dwelling or on-site structure, except for a home based child care facility.

**E52.2**

Up to 2 additional non-resident, either an employee or customer, are permitted on the site at any one time.

Note - This provision does not apply to Bed and Breakfast or farmstay business.

**E52.3**

The maximum number of heavy vehicles, trailer and motor vehicles stored on-site is as follows:

a. 1 heavy vehicle;

b. 1 trailer;

b. Up to 3 motor vehicles.

Note - The car parking provision associated with the dwelling house\(^{(22)}\) is in addition to this requirement.

Note - The number of motor vehicles stated is in addition to motor vehicles associated with a dwelling house.\(^{(22)}\)
### E52.4
Vehicle parking areas, vehicle standing areas and outdoor storage areas of plant and equipment are screened from adjoining sites by either planting, wall(s), fence(s) or a combination at least 1.8m in height along the length of those areas.

Note - Planting for screening is to have a minimum depth of 3m.

### E52.5
Heavy vehicle storage buildings, parking areas and standing areas are setback a minimum of 30m from all property boundaries.

### PO53
The hours of operation for home based business(s) \(^{(35)}\) are managed so that the activity does not adversely impact on the low intensity character and amenity anticipated in the precinct.

### E53
Hours of operation to be restricted to 8:00am to 6:00pm Monday to Saturday and are not open to the public on Sunday’s, Christmas Day, Good Friday or Anzac Day, except for:

a. bed and breakfast or farm stay business which may operate on a 24 hour basis;

b. office or administrative activities that do not generate non-residents visiting the site such as book keeping and computer work;

c. starting and warming up of heavy vehicles, which can commence at 7.00am.

### PO54
The Home based business(s) \(^{(35)}\) does not result in:

a. an adverse visual, odour, particle drift or noise nuisance impact on the residents in adjoining or nearby dwellings;

b. an adverse impact upon the low intensity and open area character and amenity anticipated in the locality;

c. the establishment of vehicle servicing or major repairs, spray painting, panel beating or any environmentally relevant activity (ERA).

### E54.1
The use does not involve heavy vehicle servicing or major repairs, including spray painting or panel.

### E54.2
Home based business(s) \(^{(35)}\) do not comprise an environmentally relevant activity (ERA) as defined in the *Environmental Protection Regulation 2008*.

### E54.3
Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

Note - Nuisance is defined in the Environmental Protection Act 1994.

### PO55

### E55.1
Only goods grown, produced or manufactured on-site are sold from the site.
### On-site display and sales of goods

On-site display and sales of goods is limited to the activities being undertaken from the site and does not result in:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>the display and sale of goods being viewed from outside of the site;</td>
</tr>
<tr>
<td>b.</td>
<td>overall development on the site having a predominantly commercial appearance.</td>
</tr>
</tbody>
</table>

**E55.2**

Display of goods grown, produced or manufactured on-site are contained within a dwelling or on-site structure and the display of goods is not visible from the boundary of the site.

### Bed and breakfast and farmstays

Bed and breakfast and farmstays are of a size and scale that:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>are consistent with the low intensity, open area character and amenity of the rural residential area;</td>
</tr>
<tr>
<td>b.</td>
<td>ensures acceptable levels of privacy and amenity for the residents in adjoining or nearby dwellings.</td>
</tr>
</tbody>
</table>

**E56**

For bed and breakfast and farmstays:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>short-term accommodation is provided in the dwelling house of the accommodation operator;</td>
</tr>
<tr>
<td>b.</td>
<td>maximum 4 bedrooms are provided for a maximum of 10 guests;</td>
</tr>
<tr>
<td>c.</td>
<td>meals are served to paying guests only;</td>
</tr>
<tr>
<td>d.</td>
<td>rooms do not contain food preparation facilities.</td>
</tr>
</tbody>
</table>

### Major electricity infrastructure, Substation and Utility installation

**PO56, PO57, PO58 and PO59**

**E57.1**

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>are enclosed within buildings or structures;</td>
</tr>
<tr>
<td>b.</td>
<td>are located behind the main building line;</td>
</tr>
<tr>
<td>c.</td>
<td>have a similar height, bulk and scale to the surrounding fabric;</td>
</tr>
<tr>
<td>d.</td>
<td>have horizontal and vertical articulation applied to all exterior walls.</td>
</tr>
</tbody>
</table>

**E57.2**

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

**E58**

Access control arrangements:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>do not create dead-ends or dark alleyways adjacent to the infrastructure;</td>
</tr>
<tr>
<td>b.</td>
<td>minimise the number and width of crossovers and entry points;</td>
</tr>
<tr>
<td>c.</td>
<td>provide safe vehicular access to the site;</td>
</tr>
<tr>
<td>d.</td>
<td>do not utilise barbed wire or razor wire.</td>
</tr>
</tbody>
</table>
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

- generates no audible sound at the site boundaries where in a residential setting; or
- meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

### Roadside stall

<table>
<thead>
<tr>
<th>PO60</th>
<th>E60.1</th>
</tr>
</thead>
</table>
| A roadside stall: | For a roadside stall:
- comprises only one roadside stall per property; |
- only offers goods grown, produced or manufactured on the site; |
- is of a size and in a location that will not result in nuisance, or have a significant adverse impact on the amenity, for residents on adjoining and surrounding properties; |
- is designed and located to ensure safe and accessible access, egress and on-site parking and not negatively impact the road network. |
- no more than one roadside stall per property; |
- goods offered for sale are only goods grown, produced or manufactured on the site; |
- the maximum area associated with a roadside stall, including any larger separate items displayed for sale, does not exceed 20m². |

<table>
<thead>
<tr>
<th>E60.2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Roadside stall:</td>
</tr>
</tbody>
</table>
- provide car parking for 2 vehicles off the road carriage and located on the property; |
- is located no closer than 100m from an intersection. |

Note: Refer to Overlay map - Road hierarchy for road classification.

### Rural industry

<table>
<thead>
<tr>
<th>PO61</th>
<th>No example provided.</th>

<tbody>
<tr>
<td>Sales office remain temporary in duration and retain a physical connection to land or building being displayed or sold.</td>
<td>Development is carried out for no longer than 2 years.</td>
</tr>
</tbody>
</table>
**Telecommunications facility**[^1]

Editor's note - In accordance with the Federal legislation Telecommunications facilities[^1] must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

**PO63**

Telecommunications facilities[^1] are co-located with existing telecommunications facilities[^1], Utility installation[^66], Major electricity infrastructure[^43] or Substation[^88] if there is already a facility in the same coverage area.

**E63.1**

New telecommunication facilities[^1] are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

**E63.2**

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

**PO64**

A new Telecommunications facility[^1] is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

**E64**

A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

**PO65**

Telecommunications facilities[^1] do not conflict with lawful existing land uses both on and adjoining the site.

**E65**

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

**PO66**

The Telecommunications facility[^1] does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;
b. visually integrated with the surrounding area;
c. not visually dominant or intrusive;
d. located behind the main building line;
e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
f. camouflaged through the use of colours and materials which blend into the landscape;
g. treated to eliminate glare and reflectivity;
h. landscaped;
i. otherwise consistent with the amenity and character of the zone and surrounding area.

**E66.1**

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

**E66.2**

In all other areas towers do not exceed 35m in height.

**E66.3**

Towers, equipment shelters and associated structures are of a design, colour and material to:

a. reduce recognition in the landscape;
b. reduce glare and reflectivity.

**E66.4**

[^1]: Moreton Bay Regional Council Planning Scheme V5 Consultation Version commencing 22 July 2019
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>

</thead>
</table>
| All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. Where there is no established building line the facility is located at the rear of the site. | E66.5  
The facility is enclosed by security fencing or by other means to ensure public access is prohibited. |
| A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.  
Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.  
Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design. | E66.6  
PO67  
Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.  
PO68  
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.  
PO69  
Buildings and activities associated with a wholesale nursery which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.  
Wholesale nursery:  
a. ensures the propagation of plants, whether or not in the open, occur without loss of amenity to adjacent properties;  
No example provided. |

**Consultation Version commencing 22 July 2019**  
Moreton Bay Regional Council Planning Scheme V5
b. do not result in any form of environmental degradation, including, but not limited to, soil degradation, pollution of natural water courses and introduction of exotic plant species into the natural on-site or adjoining flora;

c. are landscaped, fenced and screened in a manner to reduce the visual appear of buildings, structures, storage and parking areas;

d. have vehicle access from a road classified as a arterial or sub-arterial.

Note - Refer to Overlay map - Road hierarchy for road classification.

**Veterinary services (87)**

**PO70**

Buildings and activities associated with veterinary services (87):

a. are for veterinary care, surgery and treatment of animals only;

b. are landscaped, fenced and screened in a manner to reduce the visual appear of buildings, structures, storage and parking areas;

c. have vehicle access from a road classified as a arterial or sub-arterial.

Note - Refer to Overlay map - Road hierarchy for road classification.

**Winery (90)**

**PO71**

Buildings and activities associated with winery (90):

a. are for a winery (90) and ancillary activities only. Uses not affiliated with winery (90) activities, or the sale of products produced or manufactured on-site, are avoided;

b. are landscaped, fenced and screened in a manner to reduce the visual appear of buildings, structures, storage and parking areas; and

c. have vehicle access from a road classified as a arterial or sub-arterial.

Note - Refer to Overlay map - Road hierarchy for road classification.

**Values and constraints criteria**
### Acidsulfatesoils - (referOverlaymap - Acidsulfatesoilstodetermineifthefollowingassessmentcriteriapply)

Note - Todemonstrateachievementoftheperformanceoutcome,anAcidsulfatesoils(ASS)investigation reportandsoilmanagement planis preparedbyaquallifiedengineer. Guidance forthepreparationanan ASSinvestigation reportandsoilmanagementplanis providedinPlanning scheme policy - Acidsulfatesoils.

**PO72**
- Developmentavoidsdisturbingacidsulfatesoils. Where developmentdisturbsacidsulfatesoils,development:
  - a. is managedto avoid or minimise therelase of surface or groundwaterflows containingacids and metalcontaminants into theenvironment;
  - b. protects theenvironmentaland ecologicalvalues andhealthofreceivingwaters;
  - c. protects buildingsand infrastructure from theeffects ofacidsulfatesoils.

**E72**
- Developmentdoes not involve:
  - a. excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below than 5m Australian Height datum AHD; or
  - b. filling of land of more than 500m$^3$ of materialwith an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

**Bushfirehazard (refer Overlaymap - Bushfirehazard todetermineifthefollowingassessmentcriteriapply)**

Note - Todemonstrateachievementoftheperformanceoutcomes,a bushfiremanagementplanis preparedbyasuitablyqualifiedperson. Guidance forthepreparationofabushfiremanagementplanis providedinPlanning scheme policy – Bushfireprone areas.

Note - Unacceptablerisk is defined as a situation where people or property are exported to a predictablehazard event that may result in serious injury, lossoflife, failure ofcommunity infrastructure, or propertydamage.

**PO73**
- Development:
  - a. minimisesthenumberofbuildingandspeople workingandliving ona site exposeditobushfire risk;
  - b. ensures theprotection oflifeduring thepassage of a firefront;
  - c. is locatedanddesigned to increase thechance of survivalof buildingsandstructuresduring a bushfire;
  - d. minimiseshubfire risk from buildup offuels around buildingsandstructures;
  - e. ensuresafeandeffectivaccess for emergency servicesduringabushfire.

**E73.1**
- Buildingsandstructuresare:
  - a. not located on aridgeline;
  - b. not located on land with a slope greater than 15% (see Overlay map - Landslide hazard);
  - c. dwellingsarelocated oneasttosouth facing slopes.

**E73.2**
- Buildingsandstructureshave containedwithinthesite:
  - a. a separation from classified vegetationof 20m or thedistance required to achieve abushfireattack level (BAL) atthe building, roofedstructure or firefighting water supplyof no more than 29, whicheveris the greater;
  - b. a separation from lowthreatvegetation of 10m or thedistance required to achieve abushfireattack level (BAL) atthe building, roofedstructure or firefighting water supplyof no more than 29, whicheveris the greater;
c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;

d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and

e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:

   i. to, and around, each building and other roofed structure; and

   ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO74
Development and associated driveways and access ways:

a. avoid potential for entrapment during a bushfire;
b. ensure safe and effective access for emergency services during a bushfire;
c. enable safe evacuation for occupants of a site during a bushfire.

E74
A length of driveway:

a. to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
b. has a maximum gradient no greater than 12.5%;
c. have a minimum width of 3.5m;
d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services’ Fire Hydrant and Vehicle Access Guideline.

PO75
Development provides an adequate water supply for fire-fighting purposes.

E75
a. a reticulated water supply is provided by a distributer retailer for the area or;
b. where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
c. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access is provided to within 3m of that water storage source.
d. Where a tank is the nominated on-site fire fighting water storage source, it includes:

   i. a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;

   ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.
PO76
Development:

- does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
- does not present danger or difficulty to emergency services for emergency response or evacuation.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

E76
Development does not involve the manufacture or storage of hazardous chemicals.

### Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

- Clearing of native vegetation located within an approved development footprint;
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- Grazing of native pasture by stock;
- Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

### Vegetation clearing, ecological value and connectivity
<table>
<thead>
<tr>
<th>PO77</th>
<th>No example provided.</th>
</tr>
</thead>
</table>
| **Development avoids locating in a High Value Area or a Value Offset Area.** Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:  
  a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;  
  b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.  
* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014. |
| PO78 | No example provided. |
| **Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:**  
  a. retaining habitat trees;  
  b. providing contiguous patches of habitat;  
  c. provide replacement and rehabilitation planting to improve connectivity;  
  d. avoiding the creation of fragmented and isolated patches of habitat;  
  e. providing wildlife movement infrastructure.  
  Editor’s note - Wildlife movement infrastructure may include refuge poles, tree boulevard, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. |
| **Vegetation clearing and habitat protection** |
| PO79 | No example provided. |
| Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected. |
| PO80 | No example provided. |
Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

**Vegetation clearing and access, edge effects and urban heat island effects**

**PO85**
Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

**PO86**
Development minimises potential adverse ‘edge effects’ on ecological values by:

- providing dense planting buffers of native vegetation between a development and environmental areas;
- retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- restoring, rehabilitating and increasing the size of existing patches of native vegetation;
- ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- landscaping with native plants of local origin.

Editor’s note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

**PO87**
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- pervious surfaces;
- providing deeply planted vegetation buffers and green linkage opportunities;
- landscaping with local native plant species to achieve well-shaded urban places;
- increasing the service extent of the urban forest canopy.

**Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets**

**PO88**
No example provided.
Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSE Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

### Extractive resources transport route (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

#### PO89
**Development:**

- does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route;
- does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
- adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
  - locating the furthest distance possible from the transportation route;
  - habitable rooms being located the furthest from the transportation route;
  - shielding and screening private outdoor recreation space from the transportation routes.

#### E89
**The following uses are not located within the 100m wide transport route buffer:**

- Caretaker’s accommodation\(^{(10)}\), except where located in the Extractive industry zone;
- Community residence\(^{(16)}\);
- Dual occupancy\(^{(21)}\);
- Dwelling house\(^{(22)}\);
- Dwelling unit\(^{(23)}\);
- Hospital\(^{(36)}\);
- Rooming accommodation\(^{(69)}\);
- Multiple dwelling\(^{(49)}\);
- Non-resident workforce accommodation\(^{(52)}\);
- Relocatable home park\(^{(62)}\);
- Residential care facility\(^{(65)}\);
- Resort complex\(^{(66)}\);
- Retirement facility\(^{(67)}\);
- Rural workers’ accommodation\(^{(71)}\);
- Short-term accommodation\(^{(77)}\);
- Tourist park\(^{(84)}\).

#### PO90
**Development:**

- does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route;
- ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility;
- utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

#### E90.1
Development does not create a new vehicle access point onto an Extractive resources transport route.

#### E90.2
A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)
Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planing scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

</tbody>
</table>
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.

**Landslide hazard** (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard.

### PO95

**Development:**

- maintains the safety of people and property on a site and neighbouring sites from landslides;
- ensures the long-term stability of the site considering the full nature and end use of the development;
- ensures site stability during all phases of construction and development;
- minimises disturbance of natural drainage patterns of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater
- minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

### E95

**Development does not:**

- involve earthworks exceeding 50m³;
- involve cut and fill having a height greater than 600mm;
- involve any retaining wall having a height greater than 600mm;
- redirect or alter the existing flow of surface or groundwater.

### PO96

**Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:**

- minimising overuse of cut and fill to create single flat pads and benching;
- avoiding expanses of retaining walls, loss of trees and vegetation and interference with natural drainage systems;
- minimising any adverse visual impact on the landscape character;
- Protect the amenity of adjoining properties.

### E96

**Buildings, excluding domestic outbuildings:**

- are split-level, multiple-slab, pier or pole construction;
- are not single plane slab on ground.

### PO97

**Development does not involve the manufacture, handling or storage of hazardous chemicals.**
Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

- a. the long-term stability of the development site considering the full nature and end use of the development;
- b. site stability during all phases of construction and development;
- c. the development is not adversely affected by landslide activity originating on sloping land above the site;
- d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

### Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

**Riparian and wetland setbacks**

<table>
<thead>
<tr>
<th>PO114</th>
<th>E114</th>
</tr>
</thead>
</table>
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- a. impact on fauna habitats;
- b. impact on wildlife corridors and connectivity;
- c. impact on stream integrity;
- d. impact of opportunities for revegetation and rehabilitation planting;
- e. edge effects.

Development does not occur within:

- a. 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line
- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
6.2.3.2.2 Developed lots

6.2.3.2.2.1 Purpose - Transition precinct, Developed lot

Editor's note - The outcomes in this section are generally the same as General residential zone - Next generation neighbourhood precinct or the urban neighbourhood precinct (where identified in the Morayfield South urban area on 'Figure 6.2.3.2.2.1 Morayfield South urban area') but for developed lots.

1. For uses on developed lots that are serviced with all local government networks including water and sewer, the purpose of the Emerging community zone - transition precinct will be achieved through the following overall outcomes:
   a. Development only occurs on a developed lot that is serviced by all local government networks including water and sewer.
   b. The Transition precinct will mainly comprise a series of residential neighbourhoods that will each achieve:
      i. a minimum site density of 45 dwellings per hectare if on land within the Morayfield South urban area identified on 'Figure 6.2.3.2.2.1 Morayfield South urban area'; or
      ii. between 15 and 75 dwellings per hectare for all other areas a minimum of 15 dwellings per hectare.
   c. Neighbourhoods will have a mix of residential uses, tenure and densities on a variety of lot sizes providing housing choice and affordability for different lifestyle choices and life stages to meet diverse community needs. Land within the Morayfield South urban area identified on 'Figure 6.2.3.2.2.1 Morayfield South urban area' will be of a scale and density to facilitate an efficient use of land that supports compact, walkable and sustainable communities that are well connected to adjoining centres, community and social infrastructure.
   d. Neighbourhoods are designed to provide well-connected, safe and convenient movement and open space networks through interconnected streets and active transport linkages that provide high levels of accessibility between residences, open space areas and places of activity.
   e. Medium to high density residential uses (e.g. Multiple dwelling\(^{(49)}\), Relocatable home park\(^{(62)}\), Residential care facilities\(^{(65)}\), Retirement facility\(^{(67)}\), Rooming accommodation\(^{(69)}\), Short-term accommodation\(^{(77)}\) are located in proximity to a range of services and public transport stop(s) or station(s).
   f. The design, siting and construction of residential uses are to:
      i. contribute to an attractive streetscape with priority given to pedestrians;
      ii. encourage passive surveillance of public spaces;
      iii. results in privacy and residential amenity consistent with the low to medium density residential character intended for the area;
      iv. provide a diverse and attractive built form;
      v. orientate to integrate with the street and surrounding neighbourhood;
      vi. incorporate sub-tropical urban design principles that respond to local climatic conditions;
      vii. incorporate sustainable practices including maximising energy efficiency and water conservation;
      viii. incorporate natural features and respond to site topography;
      ix. cater for appropriate car parking and manoeuvring areas on-site;
      x. be of a scale and density consistent with the low to medium density residential character intended for the area;
xi. provide urban services such as reticulated water, sewerage, sealed roads, parks and other identified infrastructure;

xii. ensure domestic outbuildings are subordinate in appearance and function to the dwelling.

g. **Home based business can only be established where the scale and intensity of the activity does not detrimentally impact upon the character and amenity associated with the surrounding area.** Specifically, Home based business does not include the sale or restoration of more than 4 vehicles in any calendar year or, undertake a mechanical repairs or panel beating activity associated with a business at the subject premises.

h. Non-residential uses in the Transition precinct on a developed lot take the form of community activities, corner stores, neighbourhood hubs and local centres.

i. Community activities:
   i. establish in a location that may be serviced by public transport;
   ii. do not negatively impact adjoining residents or the streetscape;
   iii. do not undermine the viability of existing or future centres.

j. Corner stores may establish as a standalone use (not part of a neighbourhood hub) where:
   i. the store is of a scale that remains subordinate to all centres and neighbourhood hubs within the region;
   ii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. The corner store should not be within 1600m of another corner store, neighbourhood hub or centre measured from the centre of the corner store, neighbourhood hub or centre;
   iii. they are appropriately designed and located to include active frontages.

k. Retail and commercial activities *(forming part of a neighbourhood hub)* *(excluding Service stations)*:
   i. cluster with other non-residential uses (excluding corner stores) forming a neighbourhood hub;
   ii. are centred around a main street central core fostering opportunities for social and economic exchange;
   iii. are of a small scale, appropriate for a neighbourhood hub;

   **Note - Retail and commercial uses that will result in a new or existing neighbourhood hub expanding to a scale and function consistent with a Local centre are to be assessed as if establishing a new Local centre. Refer to the Centre zone code for relevant assessment benchmarks.**

   iv. do not negatively impact adjoining residents or the streetscape;
   v. are subordinate in function and scale to all centres within the region.

l. **Service stations:**
   i. establish where they will not disrupt, fragment or negatively impact active frontages *(e.g. within a neighbourhood hub)*;
   ii. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;
iii. establish in locations that will not have a negative impact on the street environments intended to include active frontages (e.g. Neighbourhood hubs or centres);

iv. do not negatively impact adjoining residents or the streetscape;

v. ancillary uses or activities only service the convenience needs of users.

m. The design, siting and construction of non-residential uses:

i. maintains a human scale, through appropriate building heights and form;

ii. provides attractive, active frontages that maximise pedestrian activity along road frontages, movement corridors and public spaces (excluding Service stations);

iii. provides for active and passive surveillance of road frontages, movement corridors and public spaces;

iv. promotes active transport options and ensures an oversupply of car parking is not provided;

v. locates car parking so as not to dominate the street;

vi. does not result in large internalised shopping centres\(^{(76)}\) (e.g. large blank external walls with tenancies only accessible from within the building) surrounded by expansive areas of surface car parking.

n. New retail and commercial uses within the Morayfield South urban area identified on ‘Figure 6.2.3.2.2.1 Morayfield South urban area’ establish generally at the intersection of Blewers Road and Lindsay Road or as part of a mixed use building.

o. Neighbourhood hub expansion (into adjoining lots) or the establishment of a new neighbourhood hub only occurs where:

i. it is of a scale that remains subordinate to all centres within the region;

Note - Retail and commercial uses that will result in a new or existing neighbourhood hub expanding to a scale and function more consistent with a Local centre are to be assessed as if establishing a new Local centre. Refer to the Centre zone code for relevant assessment criteria.

ii. the expansion (into adjoining lots) will strengthen the existing neighbourhood hub as an important neighbourhood activity node;

iii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. New neighbourhood hubs are to service a currently unserviced catchment. The centre of a neighbourhood hub should not be located within 1600m of another neighbourhood hub or centre measured from the centre of each hub or centre;

iv. for a new neighbourhood hub, it is located on a sub-arterial or collector road;

v. they are appropriately designed and located to include active frontages around a main street core.

p. General works associated with the development achieves the following:

i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);

ii. the development manages stormwater to:

   A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;

   B. prevent stormwater contamination and the release of pollutants;
C. maintain or improve the structure and condition of drainage lines and riparian areas;
D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

q. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke

r. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

s. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

t. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
   A. the provision of replacement, restoration, rehabilitation planting and landscaping;
   B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
   C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;
vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
x. ensuring effective and efficient disaster management response and recovery capabilities;
xi. where located in an overland flow path:
   A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
   B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
   C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
   D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
Development in the Transition precinct, on a developed lot includes one or more of the following:

- Child care centre
- Club
- Community care centre
- Community residence
- Community use
- Dual occupancy
- Dwelling house
- Dwelling unit
- Educational establishment
- Emergency services
- Health care services
- Home based business
- Multiple dwelling
- Place of worship
- Relocatable home park
- Residential care facility
- Retirement facility
- Rooming accommodation - if within 800m walking distance of a higher order or district centre; or where within the Morayfield South urban area identified on 'Figure 6.2.3.2.2.1 Morayfield South urban area'
- Sales office - if for a corner store
- Short-term accommodation - if within 800m walking distance of a higher order or district centre or where within the Morayfield South urban area identified on 'Figure 6.2.3.2.2.1 Morayfield South urban area'
- Where in a Neighbourhood hub or where within the Morayfield South urban area identified on 'Figure 6.2.3.2.2.1 Morayfield South urban area' and part of a mixed use building:
  - Food and drink outlet
  - Hardware and trade supplies
  - Health care services
  - Indoor sport and recreation - for gymnasium
  - Office
  - Service Industry
  - Shop
  - Shopping centre
  - Veterinary services

Note: Refer to Overlay map—Centre walking distances.

Development in the Transition precinct, on a developed lot does not include any of the following:

- Adult store
- Agricultural supplies store
- Air services
- Animal husbandry
- Animal keeping
- Aquaculture
- Bar
- High impact industry
- Hotel
- Intensive animal industry
- Intensive horticulture
- Low impact industry
- Marine industry
- Medium impact industry
- Port services
- Renewable energy facility
- Research and technology industry
- Rural industry
- Rural workers’ accommodation
### 6 Zones

- Brothel\(^{(8)}\)
- Cemetery\(^{(12)}\)
- Crematorium\(^{(18)}\)
- Cropping\(^{(19)}\)
- Detention facility\(^{(20)}\)
- Extractive industry\(^{(27)}\)
- Hardware and trade supplies\(^{(32)}\) - if more than 250m\(^{2}\) GFA
- Motor sport facility\(^{(48)}\)
- Nature-based tourism\(^{(50)}\)
- Nightclub entertainment facility\(^{(51)}\)
- Non-resident workforce accommodation\(^{(52)}\)
- Outdoor sales\(^{(54)}\)
- Permanent plantation\(^{(59)}\)
- Service Station\(^{(74)}\) - if standalone use
- Showroom\(^{(78)}\)
- Special industry\(^{(79)}\)
- Theatre\(^{(82)}\)
- Tourist attraction\(^{(83)}\)
- Transport depot\(^{(85)}\)
- Warehouse\(^{(88)}\)
- Wholesale nursery\(^{(89)}\)
- Winery\(^{(90)}\)

w. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

**Figure 6.2.3.2.2.1 Morayfield South urban area**
6.2.3.2.2 Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part E, Table 6.2.3.2.2.1. Where the development does not meet a requirement for accepted development (RAD) within Part E Table 6.2.3.2.2.1, the category of development changes to assessable development under the rules outlined in section 5.3.3.(1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

### Requirements for accepted development - For developed lots only

#### Servicing

**RAD1** The site is a developed lot.

#### Building height (Residential uses)

**RAD2** Building height does not exceed:

- a. that shown on Overlay map - Building heights; or
- b. for lots identified in the Morayfield South urban area as shown on 'Figure 6.2.3.2.2.1 Morayfield South urban area' building height is within a minimum of 8.5m and a maximum of 21m;
- c. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.

#### Building height (Non-residential uses)

**RAD3** Where involving an extension (building work) building heights for the extension do not to exceed that shown on Overlay map - Building heights.

#### Setbacks (Residential uses)

**RAD4** Setbacks (excluding built to boundary walls) comply with the following:

- a. if in the Morayfield South urban area shown on 'Figure 6.2.3.2.2.1 Morayfield South urban area' - Table 6.2.3.2.2.4 'Setbacks (Residential uses) - Morayfield South urban area' - Setbacks (Residential uses) - Morayfield South urban area; or
- b. all other areas - Table 6.2.3.2.2.3 'Setbacks (Residential uses) - All other areas' - Setback (Residential uses) - All other areas.

Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

**RAD5** Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:

- a. only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.3.2.2.5 or Table 6.2.3.2.2.6;
- b. of a length and height:
  - i. if in the Morayfield South urban area shown on 'Figure 6.2.3.2.2.1 Morayfield South urban area' - Table 6.2.3.2.2.6 'Built to boundary walls (Residential uses) - Morayfield South urban area'; or
  - ii. all other areas - Table 6.2.3.2.2.5 'Built to boundary walls (Residential uses) - All other areas'
- c. setback from the side boundary:
0. not more than 20mm; or

i. if a plan of development shows provides for only one built to boundary wall on the one boundary, not more than 150mm; or

ii. if a built to boundary wall may be built on each side of the same boundary, not more than 20mm

d. on the low side of a sloping lot.

Editor’s note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to boundary walls on adjacent lots a ‘High Density Development Easement’ is recommended; or for all other built to boundary walls an ‘easement for maintenance purposes’ is recommended.

Site cover (Residential uses)

<table>
<thead>
<tr>
<th>RAD6</th>
<th>Site cover (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures) does not exceed the specified percentages in the table below:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

</tr>
<tr>
<td></td>
<td>300m² or less</td>
</tr>
<tr>
<td>Less than 8.5m</td>
<td>75%</td>
</tr>
<tr>
<td>8.5m - 12.0m</td>
<td>50%</td>
</tr>
<tr>
<td>Greater than 12.0m</td>
<td>N/A</td>
</tr>
</tbody>
</table>

Lighting

| RAD7 | Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting. |
|      | Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day. |

Clearing of habitat trees where not located in the Environmental areas overlay map

<table>
<thead>
<tr>
<th>RAD8</th>
<th>Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. Clearing of a habitat tree located within an approved development footprint;</td>
</tr>
<tr>
<td></td>
<td>b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;</td>
</tr>
<tr>
<td></td>
<td>c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;</td>
</tr>
<tr>
<td></td>
<td>d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;</td>
</tr>
</tbody>
</table>
e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Editor’s note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a ‘habitat tree’. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

### Works requirements

#### Utilities

**RAD9** Where available, the development is connected to:-

- an existing reticulated electricity supply;
- telecommunications and broadband;
- reticulated sewerage;
- reticulated water;
- sealed and dedicated road.

Development is provided with an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).

**RAD10** Where involving an extension (building work) in front of the main building line and where the lot adjoins or is opposite to a park**, foreshore or Humpybong Reserve, all existing overhead power lines are to be undergrounded for the full frontage of the lot.

#### Access

**RAD** The frontage road is fully constructed to Council’s standards.

*Note - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.*

*Note - Frontage roads include streets where no direct lot access is provided.*

**RAD11** Any new or changes to existing direct vehicle access for residential development does not occur from arterial or sub-arterial roads.
**RAD12**

Any new or changes to existing site access crossovers and driveways are designed, and located and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. where for a Council-controlled road, and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

**RAD13**

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

**RAD**

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

### Stormwater

**RAD14**

Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

**RAD15**

Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

a. is for urban purposes only;

b. involves a land area greater than 2500m²;

c. will result in 6 or more dwellings; OR
   will result in an impervious area greater than 25% of the net developable area.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and
b. that results in 6 or more dwellings; or  
c. that result in an impervious area greater than 25% of the net developable area,  

incorporates a 'deemed to comply solution' to manage stormwater quality.  

Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design 'Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland' and Planning scheme policy - Integrated design.  

RAD  
Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated.  

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.  

RAD  
Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties.  

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.  

RAD  
Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:  

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with Sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits;</td>
</tr>
</tbody>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.  

Note - Refer to Planning scheme policy - Integrated design (Appendix C) for easement requirements over open channels.  

<table>
<thead>
<tr>
<th>Site works and construction management</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD16</td>
<td>The site and any existing structures are to be maintained in a tidy and safe condition.</td>
</tr>
</tbody>
</table>
### RAD17
Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy—Stormwater management and Planning scheme policy—Integrated design.

Development does not cause erosion or allow sediment to leave the site.

Note - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation.

### RAD
No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

### RAD
Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented.

### RAD20
Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.

### RAD18
Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

### RAD21
Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

### RAD19
All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

### RAD
Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - No burning of cleared vegetation is permitted.

Note - The chipped vegetation must be stored in an approved location.

### RAD
All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.
Earthworks

RAD23  The total of all cut and fill on-site does not exceed 900mm in height.

**Figure – Cut and Fill**

Note—This is site earthworks not building work.

Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

   i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

   ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;

**THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT**
Cut and fill batters, (other than batters to dams and water impoundments), have a finished slope no steeper than the following:

a. any cut batter is no steeper than 1V in 4H;
b. any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;
c. any compacted fill batter is no steeper than 1V in 4H.

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

Note - Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.

All fill and excavation is contained on-site and is free draining.

Earthworks undertaken on the development site are shaped in a manner which does not:

a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
b. redirect stormwater surface flow away from existing flow paths; or

i. concentrates the flow; or

ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or

iii. causes actionable nuisance to any person, property or premises.

All fill placed on-site is:
a. limited to that necessary for the approved use;

b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.

**RAD22**
The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**RAD**
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity is defined in Schedule 2 of the Act.

**RAD24**
Filling or excavation that would result in any of the following is not carried out on site: does not result in:

a. reduction in cover over any Council or public sector entity infrastructure to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Schedule 2 of the Act.

**Fire services**

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.
**RAD25** External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations*.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

- **a.** in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
- **b.** in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- **c.** in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
  - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
  - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
  - for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities; and
- **d.** in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.

**RAD26** A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- **a.** an unobstructed width of no less than 3.5m;
- **b.** an unobstructed height of no less than 4.8m;
- **c.** constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- **d.** an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

**RAD27** On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment*.

**RAD28** For development that contains on-site fire hydrants external to buildings:

- **a.** those external hydrants can be seen from the vehicular entry point to the site; or
- **b.** a sign identifying the following is provided at the vehicular entry point to the site:
  - the overall layout of the development (to scale);
  - internal road names (where used);
  - all communal facilities (where provided);
  - the reception area and on-site manager’s office (where provided);
  - external hydrants and hydrant booster points;
  - physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- **a.** in a form;
b. of a size;
c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

**RAD29**
For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note *Fire hydrant indication system* is available on the website of the Queensland Department of Transport and Main Roads.

### Use specific requirements

<table>
<thead>
<tr>
<th>Dual occupancies&lt;sup&gt;(21)&lt;/sup&gt;</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>RAD30</strong> Dual Occupancies&lt;sup&gt;(21)&lt;/sup&gt; are located on lots with a total road frontage of 25m or greater.</td>
</tr>
</tbody>

</table>
| **RAD49** Equipment shelters and associated structures are located:
  a. directly beside the existing equipment shelter and associated structures;
  b. behind the main building line;
  c. further away from the frontage than the existing equipment shelter and associated structures;
  d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. |
| **RAD50** Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality. |
| **RAD51** The facility is enclosed by security fencing or by other means to ensure public access is prohibited. |
| **RAD52** A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses. |
Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.

| RAD53 | All equipment comprising the telecommunications facility[^81] which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary. |

Retail, commercial and community uses

**RAD54** Where involving an extension (building work) in the front setback a minimum of 50% of the front facade of the building is made up of windows or glazing between a height of 1m and 2m. The minimum window/glazing is to remain uncovered and free of signage. Any tinting, signage or vinyl wrap applied to a glazed facade located at ground floor level is to maintain visibility of the internal activity from the street and not obscure surveillance of the street.

**Figure - Glazing**

| RAD55 | Development does not result in a reduction in the number or standard of car parking spaces provided on the site except where a reduction is required for the provision of cycle parking. |
| RAD56 | Where additional car parking spaces are provided they are not located between the frontage and the main building line. |
| RAD57 | Where involving an extension (building work), bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste. |
| RAD58 | Where involving an extension (building work) it does not result in a reduction in the amount or standard of established landscaping on-site. |
| RAD59 | Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.  

Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day. |
| RAD60 | Hours of operation do not exceed 6:00am to 9:00pm Monday to Sunday. |
| RAD | Development does not involve a drive through facility. |
Values and constraints requirements

Note - The relevant values and constraints requirements do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

RAD61 Development does not involve:

a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or

b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following requirements apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

RAD62

a. Building and structures are:

i. not located on a ridgeline

ii. not located on land with a slope greater than 15% (see Overlay map – Landslide hazard)

b. Dwellings are located on east to south facing slopes.
Buildings and structures have contained within the site:

a. a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;

b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;

c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;

d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and

e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:

i. to, and around, each building and other roofed structure; and

ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959.

---

The length of driveway:

a. to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;

b. has a maximum gradient no greater than 12.5%;

c. have a minimum width of 3.5m;

d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services’ Fire Hydrant and Vehicle Access Guideline.

A reticulated water supply is provided by a distributer retailer for the area or, where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures.
b. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access to within 3m of that water storage source is provided.

c. Where a tank is the nominated on-site fire fighting water storage source, it includes:
   i. a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;
   ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house and all associated facilities* or an extension to an existing dwelling house only, and comprises an area no greater than 1500m².
Note - *All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.

Editor's note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor's note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;
ii. be the least valued area of koala habitat on the site;
iii. minimise the footprint of the development envelope area;
iv. minimise edge effects to areas external to the development envelope;
v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;
vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

The following uses are not located within the 100m wide transport route buffer:

a. Caretaker’s accommodation(10), except where located in the Extractive industry zone;
b. Community residence(16);
c. Dual occupancy(21);
d. Dwelling house(22);
e. Dwelling unit(23);
f. Hospital(36);
g. Rooming accommodation(68);
h. Multiple dwelling(49);
i. Non-resident workforce accommodation
j. Relocatable home park
k. Residential care facility
l. Resort complex
m. Retirement facility
n. Rural workers’ accommodation
o. Short-term accommodation
p. Tourist park

Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resource transport route.

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

**Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)**

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;
b. laying of overhead or underground services;
c. any sealing, paving, soil compaction;
d. any alteration of more than 75mm to the ground surface level prior to work commencing.

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

**Landslide hazard (refer Overlay map - Landslide hazard to determine if the following requirements apply)**
<table>

**Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following requirements apply)**

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

<table>
<thead>
<tr>
<th>RAD96</th>
<th>No development is to occur within:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. 50m from top of bank for W1 waterway and drainage line</td>
</tr>
<tr>
<td></td>
<td>b. 30m from top of bank for W2 waterway and drainage line</td>
</tr>
<tr>
<td></td>
<td>c. 20m from top of bank for W3 waterway and drainage line</td>
</tr>
<tr>
<td></td>
<td>d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.</td>
</tr>
</tbody>
</table>

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.
Part F - Criteria for assessable development - Transition precinct, developed lot

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part F, Table 6.2.3.2.2 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

</tbody>
</table>

### Building height (Non-residential uses)

<table>
<thead>
<tr>
<th>PO5</th>
<th>E5</th>
</tr>
</thead>
<tbody>
<tr>
<td>The height of non-residential buildings does not adversely affect amenity of the area or of adjoining properties and positively contributes to the intended built form of the surrounding area.</td>
<td>Building heights do not exceed that mapped on Overlay map - Building heights except for architectural features associated with religious expression on Place of worship(^{(60)}) and Educational establishment(^{(24)}) buildings.</td>
</tr>
<tr>
<td>Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height, setbacks, site cover, building bulk and mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution;</td>
<td></td>
</tr>
</tbody>
</table>

### Setbacks (Residential uses)

<table>
<thead>
<tr>
<th>PO6</th>
<th>E6.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential buildings and structures are setback to:</td>
<td>Setbacks (excluding built to boundary walls) comply with the following:</td>
</tr>
</tbody>
</table>
### 6 Zones

**a.** be consistent with the low to medium density Transition character intended for the area, where buildings are positioned closer to the footpath to create more active frontages and maximise private open space at the rear;

**b.** result in development not being visually dominant or overbearing with respect to the streetscape and the adjoining sites;

**c.** maintain private open space areas that are of a size and dimension to be usable and functional;

**d.** maintain the privacy of adjoining properties;

**e.** ensure parked vehicles do not restrict pedestrian and traffic movement and safety;

**f.** limit the length, height and openings of boundary walls to maximise privacy and amenity on adjoining properties;

**g.** provide adequate separation to particular infrastructure and waterbodies to minimise adverse impacts on people, property, water quality and infrastructure;

**h.** ensure built to boundary walls do not create unusable or inaccessible spaces and do not negatively impact the streetscape character, amenity or functionality of adjoining properties.

---

**a.** if in the Morayfield South urban area shown on 'Figure 6.2.3.2.2.1 Morayfield South urban area' - Table 6.2.3.2.2.3 'Setbacks (Residential uses)' - All other areas' - Setbacks (Residential uses) - Morayfield South urban area; or

**b.** for all other areas - Table 6.2.3.2.2.3 'Setbacks (Residential uses)' - All other areas' - Setback (Residential uses) - All other areas.

Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

---

### E6.2

Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:

**a.** only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.3.2.2.5 or Table 6.2.3.2.2.6;

**b.** of a length and height:

i. if in the Morayfield South urban area shown on 'Figure 6.2.3.2.2.1 Morayfield South urban area' - Table 6.2.3.2.2.6 'Built to boundary walls (Residential uses) - Morayfield South urban area'; or

ii. for all other areas - Table 6.2.3.2.2.5 'Built to boundary walls (Residential uses) - All other areas';

**c.** setback from the side boundary:

- 0. not more than 20mm; or

i. if a plan of development shows provides for only one built to boundary wall on the one boundary, not more than 150 mm; or

ii. if a built to boundary wall may be built on each side of the same boundary, not more than 20mm

**d.** on the low side of a sloping lot.

---

Editor's note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to
boundary walls on adjacent lots a 'High Density Development Easement' is recommended; or for all other built to boundary walls and ‘easement for maintenance purposes’ is recommended.

### Setbacks (Non-residential uses)

**PO7**

Front setbacks ensure non-residential buildings address and actively interface with streets and public spaces.

**E7.1**

For the primary frontage buildings are constructed:

a. to the property boundary; or

b. setback a maximum of 3m from the property boundary, where for the purpose of outdoor dining.

**E7.2**

For the secondary frontage, setbacks are consistent with adjoining buildings.

**PO8**

Side and rear setbacks cater for driveway(s), services, utilities and buffers required to protect the amenity of adjoining sensitive land uses and the development will not be visually dominant or overbearing with respect to adjoining properties.

No example provided.

### Site cover (Residential uses)

**PO9**

Residential buildings and structures will ensure that site cover:

a. does not result in a site density that is inconsistent with the character of the area;

b. does not result in an over development of the site;

c. does not result in other elements of the site being compromised (e.g. Setbacks, open space etc);

d. reflects the low to medium density character intended for the area.

Note - Refer to Planning scheme policy - Residential design for details and examples.

**E9**

Site cover (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures) does not exceed the specified percentages in the table below.

<table>

### Movement network

**PO10**

No example provided.
Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

<table>
<thead>
<tr>
<th>PO11</th>
<th>Development provides and maintains the connections shown on:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. 'Figure 6.2.3.2.2.2 - Morayfield South' - Morayfield South;</td>
</tr>
<tr>
<td></td>

</tr>
</tbody>
</table>

**Water sensitive urban design**

**PO12**
Best practice Water Sensitive Urban Design (SWD) is incorporated within development sites adjoining street frontages to mitigate impacts of stormwater run-off in accordance with Planning scheme policy - Integrated design.

**Sensitive land use separation**

**PO13**
Sensitive land uses within 250m of land in the Industry zone - General industry precinct must mitigate any potential exposure to industrial air, noise or odour emissions that impact on human health, amenity and wellbeing.

<table>
<thead>
<tr>
<th>E13</th>
<th>Development is designed and operated to ensure that:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. it meets the criteria outlined in the Planning Scheme Policy – Noise; and</td>
</tr>
<tr>
<td></td>
<td>b. the air quality objectives in the Environmental Protection (Air) Policy 2008, are met.</td>
</tr>
</tbody>
</table>

**Amenity**

**PO14**
The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

**Noise**

**PO15**
Noise generating uses do not adversely affect existing or potential noise sensitive uses.
**PO16**

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

<table>
<thead>
<tr>
<th>E16.1</th>
<th>Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.</th>
</tr>
</thead>
</table>
| E16.2 | Noise attenuation structures (e.g. walls, barriers or fences):

- are not visible from an adjoining road or public area unless:
  - adjoining a motorway or rail line; or
  - adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.

- do not remove existing or prevent future active transport routes or connections to the street network;
- are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

<table>
<thead>
<tr>

<th>E27.3</th>
</tr>
</thead>
</table>
Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

E

Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO

Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor's Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

E

Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.

PO

Roads which provide access to the site from an arterial or sub-arterial road remain trafficable during major storm events without flooding or impacting upon residential properties or other premises.

E

Access roads to the development have sufficient longitudinal and cross drainage to remain safely trafficable during major storm (1% AEP) events.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - Refer to QUDM for requirements regarding trafficability.

E

Culverts and causeways do not increase inundation levels or increase velocities, for all events up to the defined flood event, to upstream or downstream properties.

Street design and layout

PO

Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:

a. access to premises by providing convenient vehicular movement for residents between their homes and the major road network;

No example provided
b. safe and convenient pedestrian and cycle movement;
c. adequate on street parking;
d. stormwater drainage paths and treatment facilities;
e. efficient public transport routes;
f. utility services location;
g. emergency access and waste collection;
h. setting and approach (streetscape, landscaping and street furniture) for adjoining residences;
i. expected traffic speeds and volumes; and
j. wildlife movement.

Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.

PO28
Upgrade works (whether trunk or non-trunk) are provided where necessary to:

a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
b. ensure the orderly and efficient continuation of the active transport network;
c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy—Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy—Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy—Integrated transport assessment.

Note - The road network is mapped on Overlay map—Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map—Active transport

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

E
No example provided:

New intersections onto existing roads are designed to accommodate traffic volumes and traffic movements taken from a date 10 years from the date of completion of the last stage of the development. Design is to be in accordance with Planning scheme policy - Integrated design.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.

E
Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy - Operational works inspection; maintenance and bonding procedures.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.
The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m2 Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m2 GFA;
- Warehouses and Industry greater than 6000m2 GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissect or significantly impacts on an environmental area or an environmental corridor;

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

The active transport network is extended in accordance with Planning scheme policy - Integrated design:

Note - Existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.

The existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.
Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

PO

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

E

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. Where the through road provides an access or residential street function:
   i. intersecting road located on same side = 60 metres; or
   ii. intersecting road located on opposite side = 40 metres.

b. Where the through road provides a local collector or district collector function:
   i. intersecting road located on same side = 100 metres; or
   ii. intersecting road located on opposite side = 60 metres.

c. Where the through road provides a sub-arterial function:
   i. intersecting road located on same side = 250 metres; or
   ii. intersecting road located on opposite side = 100 metres.

d. Where the through road provides an arterial function:
   i. intersecting road located on same side = 350 metres; or
   ii. intersecting road located on opposite side = 150 metres.

e. Walkable block perimeter does not exceed 500 metres.
### Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only;</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width containing near side parking lane (if required); cycle lane (if required); 2 travel lanes plus 1.5m wide (full depth pavement) gravel shoulder and table drainage to the opposite side. The minimum total travel lane width is:</td>
</tr>
<tr>
<td>OR</td>
<td></td>
</tr>
<tr>
<td>Frontage road sealed but not constructed* to Planning scheme policy - Integrated design standard;</td>
<td>OR</td>
</tr>
<tr>
<td>OR</td>
<td></td>
</tr>
<tr>
<td>Frontage road partially constructed* to Planning scheme policy - Integrated design standard;</td>
<td></td>
</tr>
</tbody>
</table>

Note - Major roads are sub-arterial roads and arterial roads. Minor roads are roads that are not major roads.

Note - Construction includes all associated works (services, street lighting and linemarking).

Note - Alignment within road reserves is to be agreed with Council.

Note - *Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

Note - Roads are considered to be constructed in accordance with Council’s standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.
Stormwater

**PO**

| E | The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design. |
|   | Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM. |
| E | Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM. |
| Note - Development is to provide roof and allotment (inter-allotment - QUDM level III) drainage, including bunds, to all lots that have a gradient less than 1 in 100 (for the whole of the allotment) to the road. The inter-allotment drainage system (including easements) is provided in accordance with Planning scheme policy - Integrated design (Appendix C). |

**PO**

| E | The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site. |
| E | The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots. |
| E | Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas. |
The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel.  
Note - Refer to QUDM for recommended average flow velocities.

<table>
<thead>
<tr>
<th>PO</th>
<th>Provide measures to properly manage surface flows for the 1% AEP event (for the fully developed catchment) draining to and through the land to ensure no actionable nuisance is created to any person or premises as a result of the development. The development must not result in ponding on adjacent land, redirection of surface flows to other premises or blockage of a surface flow relief path for flows exceeding the design flows for any underground system within the development.</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>The stormwater drainage system is designed and constructed in accordance with Planning scheme policy - Integrated design.</td>
</tr>
</tbody>
</table>

**PO29**

Stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

**PO30**

Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

**PO31**

Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 2 of the SPP.
A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and
b. results in 6 or more dwellings; or
c. results in an impervious area greater than 25% of the net developable area;

Stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.

Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be design in accordance with Planning scheme policy - Integrated Design (Appendix C).

PO32

Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;

b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUBM.

Stormwater drainage pipes and structures through or within private land (including inter-allotment drainage) are protected by easements in favour of Council with sufficient area for practical access for maintenance purposes.

Note - In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council’s stormwater drainage system.

E

No example provided:

Note - In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council’s stormwater drainage system.

Stormwater pipe up to 825mm diameter | Minimum easement width (excluding access requirements)
--- | ---
| Stormwater pipe up to 825mm diameter | 3.0m
| Stormwater pipe up to 825mm diameter with sewer pipe up to 225mm diameter | 4.0m
| Stormwater pipe greater than 825mm diameter | Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

</table>
| **E34.2** | Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.  

**Note** - The measures are adjusted on-site to maximise their effectiveness. |
| **E34.3** | The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property. |
| **E34.4** | **Where works are proposed in proximity to an existing street tree**, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.  

**Existing street trees are protected and not damaged during works.**  

**Note** - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented. |
| **PO35** | Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts. |
| **E35** | No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works. |
| **PO36** |   |
| **E36.1** |   |
**All development works on-site and including** the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

**Note** - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.

**Note** - A Traffic Management Plan may be required to demonstrate compliance with this PO: A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

**Note** - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less, and:

- a. the aggregate volume of imported or exported material is greater than 1000m³; or
- b. the aggregate volume of imported or exported material is greater than 200m³ per day; or
- c. the proposed haulage route involves a vulnerable land use or shopping centre.

**Note** - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.

**Editor's note** - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**E36.2**

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

**Note** - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

**E36.3**

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

**E**

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

**Note** - The road hierarchy is mapped on Overlay map - Road hierarchy.

**Note** - A dilapidation report may be required to demonstrate compliance with this E.

**E**

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

**Note** - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.
Access to the development site is obtained via an existing lawful access point.

**PO37**

All disturbed areas are **to be progressively stabilised during construction and the entire site** rehabilitated and **substantially stabilised** at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

**E37**

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. **grassed** stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

**PO**

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

Note - **A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).**

**E**

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

**PO38**

The clearing of vegetation on-site:

a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and

b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;

c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

**E38.1**

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

**E38.2**

Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.
All development works are carried out at times which minimise noise impacts to residents:

All development works are carried out within the following times:

- **Monday to Saturday** (other than public holidays) between 6:30am and 6:30pm on the same day;

- **no work is to be carried out on Sundays or public holidays.**

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

<table>
<thead>
<tr>
<th><strong>PO39</strong></th>
<th><strong>No example provided.</strong></th>
</tr>
</thead>
</table>

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

---

**Earthworks**

<table>
<thead>
<tr>
<th><strong>PO40</strong></th>
<th><strong>E40.1</strong></th>
</tr>
</thead>
</table>

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- **the natural topographical features of the site;**
- **short and long-term slope stability;**
- **soft or compressible foundation soils;**
- **reactive soils;**
- **low density or potentially collapsing soils;**
- **existing fill and soil contamination that may exist on-site;**
- **the stability and maintenance of steep rock slopes and batters;**
- **excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).**

Note - Filling or excavation works are to be completed within six months of the commencement date.

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**E40.2**

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

**E40.3**

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

**E40.4**

All fill batters steeper than 1 (V) in 6 (H) on residential lots are fully turfed to prevent scour and erosion.

**E40.5**

All filling or excavation is contained on-site and is free draining.
E40.6
All fill placed on-site is:

a. limited to that area required for the necessary for the approved use;

b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.

E40.7
The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

PO41
Embarkments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

E41
Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Figure - Embankment

E42.1
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity as is defined in Schedule 2 of the Act Sustainable Planning Act 2009.

E42.2
Filling or excavation that would result in any of the following is not carried out on-site:

a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;

Retaining walls and structures

PO45

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

E45

Earth retaining structures:-

a. are not constructed of boulder rocks or timber;

b. where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary:

Figure - Retaining on boundary

c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;

d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical; 1.5m horizontal; terraced, landscaped and drained as shown below.

Figure - Cut
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;
c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements;

E

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;
Fire services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park\(^\text{(84)}\) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales\(^\text{(54)}\), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO46

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E46.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks\(^\text{(84)}\) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:

i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
| ii. | - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; |
| iii. | - for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities; and |
| d. | in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6. |

### E46.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

### E46.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

### PO47

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

### E47

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or
b. a sign identifying the following is provided at the vehicular entry point to the site:
   1. the overall layout of the development (to scale);
   2. internal road names (where used);
   3. all communal facilities (where provided);
   4. the reception area and on-site manager’s office (where provided);
   5. external hydrants and hydrant booster points;
   6. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.
Note - The sign prescribed above, and the graphics used are to be:

a. in a form;
b. of a size;
c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

**PO48**

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

**E48**

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

### Use specific criteria

#### Dual occupancies

**PO49**

Dual Occupancies:

a. are dispersed within the streetscape;
b. contribute to the diversity of dwelling types and forms;
c. are not the predominant built form.

Note - Refer to Planning scheme policy - Residential design for dispersal methods and calculation.

**E49**

Dual occupancies are dispersed within the streetscape in accordance with one or more of the following:

a. no more than 20% of sites within a block contain an existing, approved or properly made application for a dual occupancy and Dual occupancy lots (running along the street frontage) are separated by a minimum of one lot not containing an existing, approved or properly made application for a Dual occupancy; or

b. a dual occupancy is separated by a minimum of 6 lots (running along the street frontage) from another lot containing an existing, approved or properly made application for a dual occupancy; or

b. a dual occupancy is not located within 100m (in all directions) of an existing, approved or properly made application for a dual occupancy.

Note - Laneway lots may contain dual occupancies (lofts) on the end two lots within a laneway.

Note - Refer to Planning scheme policy - Residential design for dispersal methods and calculation.

### Rooming accommodation and Short-term accommodation
**PO50**

Rooming accommodation\(^{69}\) and Short-term accommodation\(^{77}\) are located within 800m walking distance of a higher order, district or local centre.

**Home based business\(^{35}\)**

**PO51**

The scale and intensity of the Home Based Business\(^{35}\):

a. is compatible with the physical characteristics of the site and the character of the local area;

b. is able to accommodate anticipated car parking demand and on-site manoeuvring without negatively impacting the streetscape or road safety;

c. does not adversely impact on the amenity of the adjoining and nearby premises;

d. remains ancillary to the residential use of the dwelling house\(^{22}\);

e. does not create conditions which cause hazards or nuisances to neighbours or other persons not associated with the activity;

f. ensure employees and visitor to the site do not negatively impact the expected amenity of adjoining properties;

g. ensure service and delivery vehicles do not negatively impact the amenity of the area.

**Major electricity infrastructure\(^{43}\), Substation\(^{80}\) and Utility installation\(^{86}\)**

**PO52**

The development does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;

b. visually integrated with the surrounding area;

c. not visually dominant or intrusive;

d. located behind the main building line;

e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;

f. camouflaged through the use of colours and materials which blend into the landscape;

**E52.1**

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

a. are enclosed within buildings or structures;

b. are located behind the main building line;

c. have a similar height, bulk and scale to the surrounding fabric;

d. have horizontal and vertical articulation applied to all exterior walls.

**E52.2**
A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

**PO53**
Infrastructure does not have an impact on pedestrian health and safety.

**E53**
Access control arrangements:
1. Do not create dead-ends or dark alleyways adjacent to the infrastructure;
2. Minimise the number and width of crossovers and entry points;
3. Provide safe vehicular access to the site;
4. Do not utilise barbed wire or razor wire.

**PO54**
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:
1. Generates no audible sound at the site boundaries where in a residential setting; or

**E54**
All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**Sales office**

**PO55**
The sales office is designed to:
1. Provide functional and safe access, manoeuvring areas and car parking spaces for the number and type of vehicles anticipated to access the site;
2. Complement the streetscape character while maintaining surveillance between buildings and public spaces;
3. Be temporary in nature.

No example provided.

**Telecommunications facility**

Note - Refer to Planning scheme policy - Integrated design for access and crossover requirements.
Editor's note - In accordance with the Federal legislation, Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

</tbody>
</table>

**PO63**
Retail and commercial uses within a neighbourhood hub are of a scale that provide for the convenience needs or localised services of the immediate neighbourhood and do not constitute the scale or function of a Local centre.

Note - For the function and scale of a Local centre refer to Table 6.2.1.1 Moreton Bay centres network.

**E63**
Retail and commercial uses within a neighbourhood hub consist of no more than:

- 1 small format supermarket with a maximum GFA of 1200m²;
- 10 small format retail or commercial tenancies with a maximum GFA of 100m² each.

**PO64**
The expansion (into adjoining lots) of existing neighbourhood hubs or the establishment of a new neighbourhood hub must:

- adjoin or address a park, public open space or include privately owned civic or forecourt space having a minimum area of 400m²;
- be located on the corner of an arterial, sub-arterial or collector road;
- form a ‘Main street’ having a maximum length of 200m;
- be centrally located within an 800m radial catchment;
- be separated from other neighbourhood hubs and centres by 1600m, measured from the centre of each neighbourhood hub or centre.

**PO65**
Corner stores may establish as standalone uses where:

- having a maximum GFA of 250m²;

No example provided.
b. the building adjoins the street frontage and has its main pedestrian entrance from the street frontage;
c. not within 1600m of another corner store, neighbourhood hub or centre.

</tbody>
</table>

Moreton Bay Regional Council Planning Scheme V5  Consultation Version commencing 22 July 2019 1597
b. new buildings adjoin or are within 3m of the primary frontage(s), civic space or public open space;

c. locating car parking areas and drive through facilities behind or under buildings to not dominate the street environment;

d. establishing and maintaining interaction, pedestrian activity and casual surveillance through appropriate land uses and building design (e.g. The use of windows or glazing and avoiding blank walls with the use of sleeving);

e. providing visual interest to the façade (e.g. Windows or glazing, variation in colour, materials, finishes, articulation, recesses or projections);

f. establishing and maintaining human scale.

PO67
All buildings exhibit a high standard of design and construction, which:

a. add visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, cantilevered awning);

b. enable differentiation between buildings;

c. contribute to a safe environment;

d. incorporate architectural features within the building facade at the street level to create human scale (e.g. cantilevered awning);

e. include building entrances that are readily identifiable from the road frontage;

f. locate and orientate to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites;

g. incorporate appropriate acoustic treatments, having regard to any adjoining residential uses;

h. facilitate casual surveillance of all public spaces.

PO68
Development provides functional and integrated car parking and vehicle access, that:

No example provided.
a. prioritises the movement and safety of pedestrians between the street frontage and the entrance to the building;

b. provides safety and security of people and property at all times;

c. does not impede active frontage and active transport options;

d. does not impact on the safe and efficient movement of traffic external to the site;

e. is consolidated and shared with adjoining sites wherever possible.

**PO69**

The safety and efficiency of pedestrian movement is prioritised in the design of car parking areas through providing pedestrian paths in car parking areas that are:

| a. | located along the most direct route between building entrances, car parks and adjoining uses; |
| b. | protected from vehicle intrusion through the use of physical and visual separation (e.g. wheel stops, trees etc); |
| c. | are of a width to allow safe and efficient access for prams and wheelchairs. |

**E70.1**

Car parking is provided in accordance with Table 6.2.3.2.2.7 'Car parking spaces'.

Note - The above rates exclude car parking spaces for people with a disability required by Disability Discrimination Act 1992 or the relevant disability discrimination legislation and standards.

**E70.2**

All car parking areas are designed and constructed in accordance with Australian Standard AS2890.1.

**PO70**

The number of car parking spaces is managed to:

| a. | avoid significant impacts on the safety and efficiency of the road network; |
| b. | avoid an oversupply of car parking spaces; |
| c. | avoid the visual impact of large areas of open car parking from road frontages and public areas; |
| d. | promote active and public transport options; |
| e. | promote innovative solutions, including on-street parking and shared parking areas. |

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.
Minimum bicycle parking facilities are provided in accordance with the table below (rounded up to the nearest whole number).

<table>
<thead>
<tr>
<th>Use</th>
<th>Minimum Bicycle Parking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential uses comprised of dwellings</td>
<td>Minimum 1 space per dwelling</td>
</tr>
<tr>
<td>All other residential uses</td>
<td>Minimum 1 space per 2 car parking spaces identified in Schedule 7 – car parking</td>
</tr>
<tr>
<td>Non-residential uses</td>
<td>Minimum 1 space per 200m2 of GFA</td>
</tr>
</tbody>
</table>

Editor’s note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

b. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

   i. the projected population growth and forward planning for road upgrading and development of cycle paths; or
   
   ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or
   
   iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor’s note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example, these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor’s note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council’s assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the examples under this heading meet the current performance requirement prescribed in the Queensland Development Code.

For non-residential uses, storage lockers:

   a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);
   
   b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).
Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor’s note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E71.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/ Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-5</td>
<td>Male and female</td>
<td>1 unisex change room</td>
<td>1</td>

<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
<tr>
<td></td>
<td>Male</td>
<td>1</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>1 urinal and 1 closet pan, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:

i. a mirror located above each wash basin;

ii. a hook and bench seating within each shower compartment;

iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.
Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

### Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy – Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

</tbody>
</table>

| PO81 | E81 |
Development:

a. does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
b. does not present danger or difficulty to emergency services for emergency response or evacuation.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

| PO82 | No example provided. |
Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

**PO83**
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- a. retaining habitat trees;
- b. providing contiguous patches of habitat;
- c. provide replacement and rehabilitation planting to improve connectivity;
- d. avoiding the creation of fragmented and isolated patches of habitat;
- e. providing wildlife movement infrastructure.

Editor’s note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

**Vegetation clearing and habitat protection**

**PO84**
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No example provided.

**PO85**

No example provided.
Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

| a. | rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; |
| b. | provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; |
| c. | undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework. |

**PO86**

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

| a. | providing contiguous patches of habitat; |
| b. | avoiding the creation of fragmented and isolated patches of habitat; |
| c. | providing wildlife movement infrastructure; |
| d. | providing replacement and rehabilitation planting to improve connectivity. |

**Vegetation clearing and soil resource stability**

**PO87**

Development does not:

| a. | result in soil erosion or land degradation; |
| b. | leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner. |

**Vegetation clearing and water quality**

**PO88**

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

| a. | ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads; |
| b. | avoiding or minimising changes to landforms to maintain hydrological water flows; |
| c. | adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry and animal keeping activities. |
### PO89
Development minimises adverse impacts of stormwater run-off on water quality by:

- a. minimising flow velocity to reduce erosion;
- b. minimising hard surface areas;
- c. maximising the use of permeable surfaces;
- d. incorporating sediment retention devices;
- e. minimising channelled flow.

### Vegetation clearing and access, edge effects and urban heat island effects

### PO90
Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

### PO91
Development minimises potential adverse ‘edge effects’ on ecological values by:

- a. providing dense planting buffers of native vegetation between a development and environmental areas;
- b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;
- d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- e. landscaping with native plants of local origin.

**Editor’s note** - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

### PO92
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- a. pervious surfaces;
- b. providing deeply planted vegetation buffers and green linkage opportunities;

No example provided.
c. landscaping with local native plant species
to achieve well-shaded urban places;
d. increasing the service extent of the urban
forest canopy.

### Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

**PO93**

Where development results in the unavoidable loss of native vegetation within a Value Offset Area, MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor’s note - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

**PO94**

Development:

a. does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route;
b. does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
c. adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
   i. locating the furthest distance possible from the transportation route;
   ii. habitable rooms being located the furthest from the transportation route;
   iii. shielding and screening private outdoor recreation space from the transportation routes.

### Extractive resources transport route (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

**PO94**

Development:

- does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route;
- does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
- adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
  - locating the furthest distance possible from the transportation route;
  - habitable rooms being located the furthest from the transportation route;
  - shielding and screening private outdoor recreation space from the transportation routes.

**E94**

The following uses are not located within the 100m wide transport route buffer:

- Caretaker’s accommodation\(^{10}\), except where located in the Extractive industry zone;
- Community residence\(^{16}\);
- Dual occupancy\(^{21}\);
- Dwelling house\(^{22}\);
- Dwelling unit\(^{23}\);
- Hospital\(^{36}\);
- Rooming accommodation\(^{69}\);
- Multiple dwelling\(^{49}\);
- Non-resident workforce accommodation\(^{52}\);
- Relocatable home park\(^{62}\);
- Residential care facility\(^{65}\);
- Resort complex\(^{66}\);
- Retirement facility\(^{67}\);
- Rural workers’ accommodation\(^{71}\);
- Short-term accommodation\(^{77}\);
- Tourist park\(^{84}\).

**PO95**

Development:

- does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route;
- ensures vehicle access and egress along transportation routes are designed and

### E95.1

Development does not create a new vehicle access point onto an Extractive resources transport route.

### E95.2
A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

### PO96

Development will:

| a. | not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building; |
| b. | protect the fabric and setting of the heritage site, object or building; |
| c. | be consistent with the form, scale and style of the heritage site, object or building; |
| d. | utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes; |
| e. | incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building; |
| f. | retain public access where this is currently provided. |

### PO97

Demolition and removal is only considered where:

| a. | a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or |
| b. | demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or |

### E96

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

### No example provided.
c. limited demolition is performed in the course of repairs, maintenance or restoration; or
d. demolition is performed following a catastrophic event which substantially destroys the building or object.

<td>Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality. Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.</td>
<td></td>
</tr>
</tbody>
</table>
| Development does:
  a. not result in the removal of a significant tree;
  b. not occur within 20m of a protected tree;
  c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees. |

| Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply) |
| Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard. |

<table>
<thead>
<tr>
<th>PO100</th>
<th>E100</th>
</tr>
</thead>
</table>
| Development:
  a. maintains the safety of people and property on a site and neighbouring sites from landslides;
  b. ensures the long-term stability of the site considering the full nature and end use of the development;
  c. ensures site stability during all phases of construction and development;
  d. minimises disturbance of natural drainage patterns of the site and does not result in the |
| Development does not:
  a. involve earthworks exceeding 50m³;
  b. involve cut and fill having a height greater than 600mm;
  c. involve any retaining wall having a height greater than 600mm;
  d. redirect or alter the existing flow of surface or groundwater. |
redirection or alteration of the existing flow if surface or groundwater 
e. minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

**PO101**

Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

a. minimising overuse of cut and fill to create single flat pads and benching;

b. avoiding expanses of retaining walls, loss of trees and vegetation and interference with natural drainage systems;

c. minimising any adverse visual impact on the landscape character;

d. Protect the amenity of adjoining properties.

**E101**

Buildings, excluding domestic outbuildings:

a. are split-level, multiple-slab, pier or pole construction;

b. are not single plane slab on ground.

**PO102**

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

a. the long-term stability of the development site considering the full nature and end use of the development;

b. site stability during all phases of construction and development;

c. the development is not adversely affected by landslide activity originating on sloping land above the site;

d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

**E102**

Development does not involve the manufacture, handling or storage of hazardous chemicals.

**Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)**

**PO103**

Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.

**E103.1**

Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous.

**E103.2**

Incineration or burial of waste within a Water supply buffer is not undertaken onsite.

**E103.3**

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

### Additional criteria for development for a Park\(^{57}\)

**PO18**

Development for a Park\(^{57}\) ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

a. public benefit and enjoyment is maximised;

b. impacts on the asset life and integrity of park structures is minimised;

c. maintenance and replacement costs are minimised.

**E118**

Development for a Park\(^{57}\) ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

### Riparian and wetland setbacks

**PO19**

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

a. impact on fauna habitats;

b. impact on wildlife corridors and connectivity;

c. impact on stream integrity;

d. impact of opportunities for revegetation and rehabilitation planting;

e. edge effects.

**E119**

Development does not occur within:

a. 50m from top of bank for W1 waterway and drainage line

b. 30m from top of bank for W2 waterway and drainage line

c. 20m from top of bank for W3 waterway and drainage line

d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Figure 6.2.3.2.2.3 - Narangba East

6 Zones
6 ZONES

6.2.4 Environmental management and conservation zone code

6.2.4.1 Application - Environmental management and conservation zone

This code applies to undertaking development in the Environmental management and conservation zone, if:

1. the development has been categorised as either accepted development subject to requirements or assessable development - code assessment, and this code is identified as applicable to that development in the assessment benchmarks for assessable development and requirements for accepted development column of a table of assessment (Part 5);

2. the development has been categorised as assessable development - impact assessment (Part 5).

When using this code, references should be made to section 5.3.2 Determining the category of development and category of assessment and, where applicable, section 5.3.3 Determining and applying the requirements for accepted development and the assessment benchmarks for assessable development located in Part 5.

6.2.4.2 Purpose - Environmental management and conservation zone

1. The purpose of the Environmental management and conservation zone code is to provide for the protection, restoration and management of areas identified as supporting significant biological diversity and ecological integrity. The Environmental management and conservation zone covers the core natural environmental areas of the Region which are, for the significant majority of the land, in public ownership. These areas consist of high ecological significance and high-value vegetation. They include key wildlife breeding and refuge areas with the strongest conservation mandate. This zone makes up a strong network of diverse natural landscapes which contribute to local habitat connectivity, koala and other priority species sustainability, biodiversity resilience, lifestyle and recreation opportunities.

The Environmental management and conservation zone code seeks to implement the policy direction as set out in Part 3, Strategic Framework.

2. The purpose of the code will be achieved through the following overall outcomes:

a. Areas having important biological, natural, and ecological values are protected from potentially degrading and destructive effects associated with development.

b. Development is restricted to activities that directly support or appreciate the biological, natural and environmental values of the area such as parks(57), walking trails, and associated support facilities.

c. Development occurs in accordance with a Council Master Plan approved under Council policy on Council owned land; or in accordance with the relevant controlling legislation (e.g. Forestry Act, Nature Conservation Act) under which the land is administered by the State. Where on private land, development is restricted to activities that directly support or appreciate the biological, natural and environmental values.

d. Development not having a close association with the natural environment is avoided.

e. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.

f. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;
B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

g. Development in the Environmental management and conservation zone includes one or more of the following where located on Council owned land and identified on a Council Master Plan approved under Council policy; where on State owned land and in accordance with a relevant, applicable Act; or where on privately owned land.

### 6.2.4.3 Criteria for assessing development

There is no accepted development subject to requirements in the Environmental management and conservation zone. Development is categorised as either accepted development or assessable development - impact assessment. Where development is categorised as assessable development - impact assessment, the assessment benchmarks becomes Part A, Table 6.2.4.1 and the whole of the planning scheme.

Part A—Criteria for assessable development - Environmental management and conservation zone

</tbody>
</table>
Development is limited to tourism and nature-based recreation, educational activities and facilities, small scale utility installation\(^{(86)}\). Development is in appropriate locations that are allied to, and compatible with, the significant conservation values of the area.

### Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

#### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

**PO5**

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
- b. protects the environmental and ecological values and health of receiving waters;
- c. protects buildings and infrastructure from the effects of acid sulfate soils.

**E5**

Development does not involve:

- a. excavation or otherwise removing of more than 100m\(^3\) of soil or sediment where below than 5m Australian Height datum AHD; or
- b. filling of land of more than 500m\(^3\) of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

#### Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy – Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

**PO6**

Development:

- a. minimises the number of buildings and people working and living on a site exposed to bushfire risk;
- b. ensures the protection of life during the passage of a fire front;
- c. is located and designed to increase the chance of survival of buildings and structures during a bushfire;

**E6.1**

Buildings and structures are:

- a. not located on a ridgeline;
- b. not located on land with a slope greater than 15% (see Overlay map - Landslide hazard);
- c. dwellings are located on east to south facing slopes.

**E6.2**

Buildings and structures have contained within the site:
d. minimises bushfire risk from build up of fuels around buildings and structures;
e. ensure safe and effective access for emergency services during a bushfire.

a. a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
   i. to, and around, each building and other roofed structure; and
   ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO7
Development and associated driveways and access ways:

a. avoid potential for entrapment during a bushfire;
b. ensure safe and effective access for emergency services during a bushfire;
c. enable safe evacuation for occupants of a site during a bushfire.

E7
A length of driveway:

a. to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
b. has a maximum gradient no greater than 12.5%;
c. have a minimum width of 3.5m;
d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services’ Fire Hydrant and Vehicle Access Guideline.

PO8
Development provides an adequate water supply for fire-fighting purposes.

E8

a. a reticulated water supply is provided by a distributor retailer for the area or;
b. where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
c. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access
is provided to within 3m of that water storage source.

d. Where a tank is the nominated on-site fire fighting water storage source, it includes:

   i. a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
   ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

PO9
Development:

a. does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;

b. does not present danger or difficulty to emergency services for emergency response or evacuation.

Editor’s note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

E9
Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development

Note - Definition for native vegetation is located in Schedule 1 Definitions.
Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

### Vegetation clearing, ecological value and connectivity

**PO10**

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- **a.** the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- **b.** on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No example provided.

**PO11**

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- **a.** retaining habitat trees;
- **b.** providing contiguous patches of habitat;
- **c.** provide replacement and rehabilitation planting to improve connectivity;
- **d.** avoiding the creation of fragmented and isolated patches of habitat;
- **e.** providing wildlife movement infrastructure.

Editor’s note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges;

No example provided.
underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

**PO17**
Development minimises adverse impacts of stormwater run-off on water quality by:

a. minimising flow velocity to reduce erosion;

b. minimising hard surface areas;

c. maximising the use of permeable surfaces;

d. incorporating sediment retention devices;

e. minimising channelled flow.

**Vegetation clearing and access, edge effects and urban heat island effects**

**PO18**
Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

No example provided.

**PO19**
Development minimises potential adverse ‘edge effects’ on ecological values by:

a. providing dense planting buffers of native vegetation between a development and environmental areas;

b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;

c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;

d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;

e. landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

**PO20**
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

No example provided.
<table>
<thead>
<tr>
<th></th>
<th>a. pervious surfaces;</th>
<th>b. providing deeply planted vegetation buffers and green linkage opportunities;</th>
<th>c. landscaping with local native plant species to achieve well-shaded urban places;</th>
<th>d. increasing the service extent of the urban forest canopy.</th>
</tr>
</thead>
</table>

### Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

**PO21**
Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

No example provided.

### Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing noise impact assessment report is provided in Planning scheme policy – Noise.

**PO22**
Development does not increase the number of people living in the Extractive Resources separation area.

**E22**
One dwelling house\(^{(22)}\) permitted per lot within separation area.

**PO23**
Development:

a. does not introduce or increase uses that are sensitive to the impacts of an Extractive industry\(^{(27)}\);  
b. is compatible with the operation of an Extractive industry\(^{(27)}\);  
c. does not comprise or undermine the function and integrity of the separation area in providing a buffer between key extractive and processing activities and sensitive, incompatible uses outside the separation area.

**E23**
Development within the separation area does not include the following activities:

a. Caretaker’s accommodation\(^{(10)}\);  
b. Community residence\(^{(16)}\);  
c. Dual occupancy\(^{(21)}\);  
d. Dwelling unit\(^{(23)}\);  
e. Hospital\(^{(36)}\);  
f. Rooming accommodation\(^{(69)}\);  
g. Multiple dwelling\(^{(49)}\);  
h. Non-resident workforce accommodation\(^{(52)}\);  
i. Relocatable home park\(^{(62)}\);  
j. Residential care facility\(^{(65)}\);  
k. Resort complex\(^{(66)}\);  
l. Retirement facility\(^{(67)}\);  
m. Rural workers’ accommodation\(^{(71)}\);  
n. Short-term accommodation\(^{(77)}\);  
o. Tourist park\(^{(84)}\).
Habitable rooms achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

All habitable rooms within the separation area are:

- acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;
- provided with mechanical ventilation.

**PO25**

Development provides open space areas for passive recreation in a manner where impacts from key extractive/processing activities, particularly noise, is minimised.

**E25**

Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

**Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)**

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

**PO26**

Development will:

- not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- protect the fabric and setting of the heritage site, object or building;
- be consistent with the form, scale and style of the heritage site, object or building;
- utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
- incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
- retain public access where this is currently provided.

**E26**

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

**PO27**

Demolition and removal is only considered where:

- a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or

**No example provided.**
b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
c. limited demolition is performed in the course of repairs, maintenance or restoration; or
d. demolition is performed following a catastrophic event which substantially destroys the building or object.

**PO28**

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

**PO29**

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.

**Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)**

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard.

**PO30**

Development:

a. maintains the safety of people and property on a site and neighbouring sites from landslides;
b. ensures the long-term stability of the site considering the full nature and end use of the development;
c. ensures site stability during all phases of construction and development;
d. minimises disturbance of natural drainage patterns of the site and does not result in the redirection or
alteration of the existing flow if surface or groundwater
e. minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

**PO31**  
Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

a. minimising overuse of cut and fill to create single flat pads and benching;
b. avoiding expanses of retaining walls, loss of trees and vegetation and interference with natural drainage systems;
c. minimising any adverse visual impact on the landscape character;
d. Protect the amenity of adjoining properties.

**E31**  
Buildings, excluding domestic outbuildings:
a. are split-level, multiple-slab, pier or pole construction;
b. are not single plane slab on ground.

**E32**  
Development does not involve the manufacture, handling or storage of hazardous chemicals.

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

a. the long-term stability of the development site considering the full nature and end use of the development;
b. site stability during all phases of construction and development;
c. the development is not adversely affected by landslide activity originating on sloping land above the site;
d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

**E33**  
The following uses are not located within a wastewater treatment site buffer:

a. Caretaker’s accommodation(10);
b. Community residence(16);
c. Dual occupancy(21);
d. Dwelling house(22);
e. Dwelling unit(23);
f. Hospital(36);
g. Rooming accommodation(69);
h. Multiple dwelling(40);
i. Non-resident workforce accommodation(52);
j. Relocatable home park(62);
k. Residential care facility(69);
| PO34 | E34.1  
Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.  
Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous. |
| E34.2  
Incineration or burial of waste within a Water supply buffer is not undertaken onsite. |
| E34.3  
Solid waste within a Water supply buffer is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor. |
| E34.4  
Holding tanks within a Water supply buffer are used for all liquid waste and provide for the separation of oils/solvents and solids prior to pump-out and collection by a licenced contractor. |
| E34.5  
Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures. |

| PO35 | E35  
On-site sewerage systems within a Water supply buffer are designed and operated to ensure there is no worsening or adverse impacts to health risks, environmental risks and water quality.  
Secondary treated wastewater treatment systems within a Water supply buffer include:  
a. emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging; |
| b. back up pump installation and backup power; |
| c. MEDLI modelling to determine irrigation rates and sizing of irrigation areas; |

Editor's Note - For guidance refer to the Seq water Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
d. vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and
e. wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities.

| PO39 | Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development: |

| E39  | Development does not involve the construction of any buildings or structures within a High voltage electricity line buffer.        |
### PO40
Development within a Pumping station buffer is located, designed and constructed to:

- **a.** ensure that odour or other air pollutant impacts on the amenity of the development met the air quality objectives in the Environmental Protection (Air) Policy 2008;

- **b.** ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.

### E40
Development does not involve the construction of any buildings or structures within a Pumping station buffer.

### Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

### PO41
Development:

- **a.** minimises the risk to persons from overland flow;

- **b.** does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.

### PO42
Development:

- **a.** maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;

- **b.** does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

</tbody>
</table>
Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- an overland flow path where it crosses more than one premises;
- inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

### Additional criteria for development for a Park

**PO48**

Development for a Park\(^{(57)}\) ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- public benefit and enjoyment is maximised;
- impacts on the asset life and integrity of park structures is minimised;
- maintenance and replacement costs are minimised.

### Riparian and wetland setbacks

**PO49**

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- impact on fauna habitats;
- impact on wildlife corridors and connectivity;
- impact on stream integrity;
- impact of opportunities for revegetation and rehabilitation planting;
- edge effects.

**E49**

Development does not occur within:

- 50m from top of bank for W1 waterway and drainage line
- 30m from top of bank for W2 waterway and drainage line
- 20m from top of bank for W3 waterway and drainage line
- 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

### Scenic amenity - Regionally significant (Hills) and Locally important (Coast)

(Refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)
PO50
Development:

a. avoids being viewed as a visually conspicuous built form on a hill top or ridgeline;

b. retains the natural character or bushland settings as the dominant landscape characteristic;

c. is viewed as being visually consistent with the natural landscape setting and does not diminish the scenic and visual qualities present in the environment.

E50
Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not:

a. located on a hill top or ridge line;

b. all parts of the building and structure are located below the hill top or ridge line.

PO51
Development:

a. does not adversely detract or degrade the quality of views, vista or key landmarks;

b. retains the natural character or bushland settings as the dominant landscape characteristic.

E51
Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

a. go across land contours, and do not cut straight up slopes;

b. follow natural contours, not resulting in batters or retaining walls being greater than 900mm in height.

PO52
Buildings and structures incorporate colours and finishes that:

a. are consistent with a natural, open space character and bushland environment;

b. do not produce glare or appear visual incompatible with the surrounding natural character and bushland environment;

c. are not visually dominant or detract from the natural qualities of the landscape.

E52.1
Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:

<table>
<thead>
<tr>

</tbody>
</table>
6.2.5 Extractive industry zone code

6.2.5.1 Application - Extractive industry zone

This code applies to undertaking development in the Extractive industry zone, if:

1. the development has been categorised as either accepted development subject to requirements or assessable development - code assessment, and this code is identified as applicable to that development in the assessment benchmarks for assessable development and requirements for accepted development column of a table of assessment (Part 5);
2. the development has been categorised as assessable development - impact assessment (Part 5).

When using this code, reference should be made to section 5.3.2 Determining the category of development and category of assessment and, where applicable, section 5.3.3 Determining and applying the requirements for accepted development and the assessment benchmarks for assessable development located in Part 5.

For accepted development subject to requirements or assessable development under this Code:

1. Part A of the code applies only to accepted development subject to requirements;
2. Part B of the code applies only to assessable development.

6.2.5.2 Purpose - Extractive industry zone

1. The purpose of the Extractive industry zone code is to appropriately manage the extraction of natural resources such as sand, gravel, quarry rock, clay and soil; and protect the zone from inappropriate uses. Development such as storage, processing, treatment and transportation facilities may be established within the extractive industry zone only where ancillary to the extractive industry.

Extractive resources of local and regional significance are protected for future optimal utilisation of the resources, separated and buffered from incompatible development and developed in an ecologically sustainable manner. At the cessation of the use the land is rehabilitated for the establishment of appropriate end uses. The purpose of the Extractive Industry zone code is to implement the policy direction as set out in Part 3, Strategic Framework.

2. The purpose of the code will be achieved through the following overall outcomes:
   a. Development is appropriately located, designed and managed to maintain safety to people, avoid significant adverse effects on the natural environment and ensure sufficient buffers are maintained in order to minimise impacts on adjacent sensitive or future sensitive land uses.
   b. Development is designed to incorporate sustainable water usage practises.
   c. The viability of existing and future extractive industry is protected from intrusion of incompatible uses.
   d. The impact of traffic and transport noise on residential and other sensitive land uses is minimised through appropriate site design and management of activities.
   e. Extractive industry activities are screened by vegetation to protect the visual amenity of the surrounding area.
   f. Extractive Industry Zone Transportation Routes are designed, constructed, upgraded and maintained to cater for the expected haulage loads and frequency of extractive resource transportation.
   g. Development of non-extractive industry uses is compatible with existing and future extractive industry and does not compromise the future utilisation of the extractive resource.
   h. Once the resource is exhausted or discontinued, land used for extractive industry activities is rehabilitated in a manner that achieves a stable land form suitable for appropriate end uses compatible with the character and amenity of the local area.
i. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.

j. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;

B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;

C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;

B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;

C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;

D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

k. Development in the Extractive industry zone includes one or more of the following:

- Animal husbandry\(^{(4)}\)
- Caretaker's accommodation\(^{(10)}\)
- Cropping\(^{(19)}\)
- Extractive Industry\(^{(27)}\)
- High Impact Industry\(^{(34)}\) (where for the batching, manufacturing or recycling of concrete or asphalt only)
- Medium impact industry\(^{(47)}\) (where for the batching, manufacturing or recycling of concrete or asphalt only)
- Park\(^{(57)}\)
I. Development in the Extractive industry zone does not include any of the following:

m. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone;

6.2.5.3 Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part A, Table 6.2.5.1. Where the development does not meet a requirement for accepted development (RAD) within Part A, Table 6.2.5.1, the category of development changes to assessable development under the rules outlined in section 5.3.3.(1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

<td>Development is not located within a Resource Area on the Extractive Resources overlay map.</td>
</tr>
</tbody>
</table>

**Values and constraints requirements**

Note - The relevant values and constraints requirements do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)**

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m\(^2\) and 500m\(^3\) respectively.

| RAD14 | Development does not involve: |
a. excavation or otherwise removing of more than 100 m$^3$ of soil or sediment where below 5 m Australian Height Datum AHD, or

b. filling of land of more than 500 m$^3$ of material with an average depth of 0.5 m or greater where below the 5 m AHD.

### Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following requirements apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

#### RAD15

**a. Building and structures are:**

i. not located on a ridgeline  
ii. not located on land with a slope greater than 15% (see Overlay map – Landslide hazard)

**b. Dwellings are located on east to south facing slopes.**

#### RAD16

Buildings and structures have contained within the site:

(1 being the safest, 6 being the most hazardous.)

<tr>
<td>i.</td>
<td>a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;</td>
</tr>
<tr>
<td>ii.</td>
<td>fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.</td>
</tr>
</tbody>
</table>

| RAD19 | Development does not involve the manufacture or storage of hazardous chemicals. |

Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editor’s Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Editor’s Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

### RAD20

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house\(^{(22)}\) or extension to an existing dwelling house\(^{(22)}\) only on lots less than 750m\(^2\).

Editor’s note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor’s note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;

ii. be the least valued area of koala habitat on the site;

iii. minimise the footprint of the development envelope area;

iv. minimise edge effects to areas external to the development envelope;

v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;

vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor’s note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.
**RAD21** No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

### Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following requirements apply)

**RAD22** Development does not result in more than one dwelling house\(^{(22)}\) per lot within separation areas.

**RAD23** Development within the separation area does not include the following uses:

a. caretaker's accommodation\(^{(10)}\);

b. community residence\(^{(16)}\);

c. dual occupancy\(^{(21)}\);

d. dwelling unit\(^{(23)}\);

e. hospital\(^{(36)}\);

f. roaming accommodation\(^{(69)}\);

g. multiple dwelling\(^{(49)}\);

h. non-resident workforce accommodation\(^{(52)}\);

i. relocatable home park\(^{(62)}\);

j. residential care facility\(^{(65)}\);

k. resort complex\(^{(66)}\);

l. retirement facility\(^{(67)}\);
m. rural workers’ accommodation (71);

n. short-term accommodation (77);

o. tourist park (84).

### RAD24

All habitable rooms within the separation area are:

a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;

b. provided with mechanical ventilation.

### RAD25

Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

### Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following requirements apply)

### RAD26

The following uses are not located within the 100m wide transport route buffer:

a. Caretaker’s accommodation (10), except where located in the Extractive industry zone;

b. Community residence (16);

c. Dual occupancy (21);

d. Dwelling house (22);

e. Dwelling unit (23);

f. Hospital (36);

g. Rooming accommodation (69);

h. Multiple dwelling (49);

i. Non-resident workforce accommodation (52);

j. Relocatable home park (62);

k. Residential care facility (65);

l. Resort complex (66);

m. Retirement facility (67);

n. Rural workers’ accommodation (71);

o. Short-term accommodation (77);

p. Tourist park (84).

### RAD27

Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.

### RAD28

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.
### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

**RAD29** Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

**RAD30** A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

**RAD31** Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

**RAD32** The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;

b. laying of overhead or underground services;

c. any sealing, paving, soil compaction;

d. any alteration of more than 75mm to the ground surface level prior to work commencing.

**RAD33** Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

### Landslide hazard (refer Overlay map - Landslide hazard to determine if the following requirements apply)

**RAD34** Development does not:

a. involve earthworks exceeding 50m³;

b. involve cut and fill having a height greater than 600mm;

c. involve any retaining wall having a height greater than 600mm;

d. redirect or alter the existing flow of surface or groundwater.

**RAD35** Buildings, excluding domestic outbuildings:
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>are split-level, multiple-slab, pier or pole construction;</td>
</tr>
<tr>
<td>b.</td>
<td>are not single plane slab on ground.</td>
</tr>
</tbody>
</table>

**RAD36** Development does not involve the manufacture, handling or storage of hazardous chemicals.

**Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following requirements apply)**

**RAD37** Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

**RAD38** Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

**RAD39** Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):

|a. | buildings or structures; |
|b. | gates and fences; |
|c. | storage of equipment or materials; |
|d. | landscaping or earthworks or stormwater or other infrastructure. |

**RAD40** On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected.

**RAD41** On-site sewerage facilities in a Water supply buffer for a dwelling house\(^{\text{(22)}}\) include:

|a. | emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time; |
|b. | a reserve land application area of 100% of the effluent irrigation design area; |
|c. | land application areas that are vegetated; |
|d. | the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area); |
|e. | wastewater collection and storage systems must have capacity to accommodate full load at peak times. |

**RAD42** On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging.

**RAD43** Development involving Permanent plantation\(^{\text{(59)}}\) within a Water supply buffer maintains a minimum of 30% ground cover at all times.

**RAD44** Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer.

**RAD45** Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.

Where located in the Regionally significant (Hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures are painted or finished such that reflectivity is less than 35%.

Where located in the Locally important (Coast) scenic amenity overlay:

- landscaping comprises indigenous coastal species;
- fences and walls facing the coast are no higher than 1m. Where fences and walls are higher than 1m, they have 50% transparency. This does not apply to a fence or wall at an angle of 90° to the coast;
- where over 12m in height, the building design includes the following architectural character elements:
  - curving balcony edges and walls, strong vertical blades and wall planes;
ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;

iii. Roof top outlooks, tensile structure as shading devices; and

iv. lightweight structures use white frame elements in steel and timber, bold colour contrast.

d. existing pine trees, palm trees, mature fig and cotton trees are retained.

Note - A list of appropriate indigenous coastal species is identified in Planning scheme policy - Integrated design.

**Part B — Criteria for assessable development - Extractive industry zone**

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part B, Table 6.2.5.2 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

**Table 6.2.5.2 Assessable development - Extractive industry zone**

</tbody>
</table>

### Amenity

**PO2**

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

### Hazardous Chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

### PO3

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

### E3.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below: Dangerous Dose

a. For any hazard scenario involving the release of gases or vapours:
   i. AEGL2 (60 minutes) or if not available ERPG2;
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
   i. 7kPa overpressure;
   ii. 4.7kW/m² heat radiation.

If criteria E3.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10^-6/year.

### E3.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below: Dangerous Dose
For any hazard scenario involving the release of gases or vapours:

- AEGL2 (60 minutes) or if not available ERPG2;
- An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

For any hazard scenario involving fire or explosion:

- 7kPa overpressure;
- 4.7kW/m² heat radiation.

If criteria E3.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10⁻⁶/year.

### E3.3

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below: Dangerous Dose

a. For any hazard scenario involving the release of gases or vapours:

- AEGL2 (60 minutes) or if not available ERPG2;
- An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:

- 14kPa overpressure;
- 12.6kW/m² heat radiation.

If criteria E3.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10⁻⁶/year.

### PO4
Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

### Management of operations

**PO14**

The design, operation and staging of the extractive industry:\(^{27}\):

- a. promotes the efficient utilisation of the resource;
- b. ensures vibration and noise levels do not exceed the Acoustic Quality Objectives contained in the Environmental Protection (Noise) Policy 2008;
- c. ensures dust and other potential air pollutants do not exceed the Air Quality Objectives contained in the Environmental Protection (Air) Policy 2008;
- d. ensures lighting complies with the Australian Standard AS4282 Control of the Obtrusive Effects of Outdoor Lighting;
- e. avoid impacts on natural environmental values to the greatest extent practicable and where impacts cannot be avoided the loss or decrease in values is minimised or offset;
- f. protects water quality and demonstrates compliance with relevant water quality objectives and outcomes;
- g. mitigate the potential adverse impacts of constraints present on the site including but not limited to acid sulfate soils, flood, bushfire and landslide;
- h. optimises potential alternative land uses after the cessation of extractive activities;
- i. has regard to the desired visual character of the locality.

Note - An Environmental management plan is to be prepared and submitted in accordance with Planning scheme policy - Extractive industry.

**PO15**

No example provided.
Disturbances to surrounding land uses are minimised through limited hours of operation for Extractive Industry\(^{(27)}\) activities.

<table>
<thead>
<tr>
<th>Activity</th>

</table>

**PO16**

On-site drainage is designed, constructed and maintained to:

a. avoid erosion;

b. avoid pollution of groundwater and surface water;

c. maintain the natural flow of water through and under the site;

d. provide opportunities to conserve and reuse water on the site;

e. prevent flooding or inundation of downstream and upstream properties; and adjoining sites.

f. where in a Water supply buffer (refer to Overlay map - Infrastructure buffers), demonstrate compliance with the development and water quality vision and objectives and specific outcomes of the Seqwater Development Guidelines; Development guidelines for water quality management in drinking water catchments.

Note - An on-site Stormwater Management Plan is to be prepared and submitted in accordance with Planning scheme policy - Stormwater management.

**PO17**

Development is designed and operated in a manner which will not compromise the stability, safety or operation of major infrastructure.

Note - Refer to Major Infrastructure Map figure X for identified Major Infrastructure locations.

**PO18**

Development is designed and managed to minimise the risk and impact of any accidental spills and/or releases of chemicals and other materials that may contaminate soil, stormwater, groundwater and/or air.

**E18**

Storage of fuels and chemicals on-site is undertaken in accordance with AS.1940 – Storage & Handling of Flammable and Combustible Liquids.
### PO19
Caretaker’s accommodation\(^{(10)}\) is provided on site, where:

a. it is compatible with and does not constrain existing and future extractive industry\(^{(27)}\) activities;

b. is safe for the residents; and

c. has regard to the residents’ needs for recreation space.

### E19.1
A Caretaker’s accommodation\(^{(10)}\) is:

a. a maximum GFA of 80m\(^{2}\);

b. separated from the processing and operational areas of the site by at least 150m;

c. provided with separate access from a road frontage to that of the extractive resource activity.

### E19.2
No more than 1 Caretaker’s accommodation\(^{(10)}\) unit is established per Extractive Industry\(^{(27)}\) operation.

Note - Refer to Key Resource Area Map figure X. for identified Resource and Processing Areas.

### Traffic and transport

#### PO20
Transport of materials from the site to a major road is undertaken:

a. on an Extractive resources transport route;

b. in a way which maintains the safety and efficiency of roads comprising the Extractive resources transport route.

Note - Refer to Overlay map - Extractive resources for identified Extractive resource transport routes.

#### PO21
Extractive resource transport routes are constructed and maintained to a sufficient standard to cater for the proposed use.

Note - A Transport route impact assessment outlining the existing standard and condition of the identified transport route is to be prepared and submitted in accordance with Planning scheme policy - Extractive industry. The report is to identify potential impacts on the network as a result of the development.

#### PO22
Height of buildings for Animal husbandry\(^{(4)}\) and Cropping\(^{(19)}\) uses:

### E22
Building height and all structures do not exceed the maximum height identified on Overlay map - Building heights.
<table>
<thead>
<tr>
<th><strong>6 Zones</strong></th>
</tr>
</thead>
</table>
| a. is consistent with the low rise, open character and amenity of the surrounding area;

</tr>
</tbody>
</table>
### Emissions into Brisbane operational airspace

**PO31**

Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport’s operational airspace.

Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport’s operational airspace.

**E31.1**

Development does not emit a gaseous plume into the airport’s operational airspace at a velocity exceeding 4.3m per second.

**E31.2**

Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

### Stormwater

**PO**

Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient.

**E**

The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design.

**E**

Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUQM.

**PO**

Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment.

**E**

The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site.

**E**

The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots.

**E**

Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas.
<table>
<thead>
<tr>
<th><strong>PO</strong></th>

</tbody>
</table>

| **PO34** | **No example provided.** |
Stormwater management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 2 of the SPP.

Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and

b. results in 6 or more dwellings; or

c. results in an impervious area greater than 25% of the net developable area;

stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.

Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be design in accordance with Planning scheme policy - Integrated Design (Appendix C).

Easements

Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;

b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy—Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUBM.

Stormwater drainage pipes and structures through or within private land (including inter-allotment drainage) are protected by easements in favour of Council with sufficient area for practical access for maintenance purposes.

Note - In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council’s stormwater drainage system.

<table>
<thead>
<tr>

Consultation Version commencing 22 July 2019

Moreton Bay Regional Council Planning Scheme V5
| E37.2 | Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.  

Note - The measures are adjusted on-site to maximise their effectiveness. |
| E37.3 | The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property. |
| E37.4 | Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.  

**Existing street trees are protected and not damaged during works.**  

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented. |

**PO38**  
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.  

**PO39**  
All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.  

Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.  

Note - A Traffic Management Plan may be required to demonstrate compliance with this PO. A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD). |
| E38 | No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works. |
| E39.1 | Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. |
| E39.2 | All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. |
**A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).**

### E39.3

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

### E

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

**Note - The road hierarchy is mapped on Overlay map - Road hierarchy.**

**Note - A dilapidation report may be required to demonstrate compliance with this E.**

### E

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

**Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.**

### E

Access to the development site is obtained via an existing lawful access point.

**No example provided:**

### E40

At completion of construction all disturbed areas of the site are to be;

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.
PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).

E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

E41.1

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

E41.2

Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location - preferably a park or public land.

PO42

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

No example provided.

---

Other uses

Specific rural uses setbacks

PO43 | E43
The following uses and associated buildings are setback from all property boundaries as follows:

- **Animal husbandry** (buildings only) – 10m
- **Cropping** (building only) – 10m

<table>
<thead>
<tr>
<th>Major electricity infrastructure</th>
<th>Substation</th>
<th>Utility installation</th>
</tr>
</thead>
</table>

**PO44**

The development does not have an adverse impact on the visual amenity of a locality and is:

- high quality design and construction;
- visually integrated with the surrounding area;
- not visually dominant or intrusive;
- located behind the main building line;
- below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- camouflaged through the use of colours and materials which blend into the landscape;
- treated to eliminate glare and reflectivity;
- landscaped;
- otherwise consistent with the amenity and character of the zone and surrounding area.

**E44.1**

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- are enclosed within buildings or structures;
- are located behind the main building line;
- have a similar height, bulk and scale to the surrounding fabric;
- have horizontal and vertical articulation applied to all exterior walls.

**E44.2**

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

**PO45**

Infrastructure does not have an impact on pedestrian health and safety.

**E45**

Access control arrangements:

- do not create dead-ends or dark alleyways adjacent to the infrastructure;
- minimise the number and width of crossovers and entry points;
- provide safe vehicular access to the site;
- do not utilise barbed wire or razor wire.

**PO46**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

**E46**

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

</table>

In all other areas towers do not exceed 35m in height.

**E51.3**

Towers, equipment shelters and associated structures are of a design, colour and material to:

a. reduce recognition in the landscape;

b. reduce glare and reflectivity.

**E51.4**

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

**E51.5**

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

**E51.6**

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note – Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

**PO52**

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

**E52**

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

**PO53**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

**E53**

All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

**PO54**

<th>Development does not constrain utilisation of existing and anticipated extractive resources.</th>
<th>Development is not located within a Resource Area on the Extractive Resources overlay map.</th>
</tr>
</thead>
</table>

### Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

<table>
<thead>
<tr>
<th>PO55</th>
<th>E55</th>
</tr>
</thead>
</table>
| Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:  
  a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;  
  b. protects the environmental and ecological values and health of receiving waters;  
  c. protects buildings and infrastructure from the effects of acid sulfate soils. | Development does not involve:  
  a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or  
  b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD. |

### Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy – Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

<table>
<thead>
<tr>
<th>PO56</th>
<th>E56.1</th>
</tr>
</thead>
</table>
| Development:  
  a. minimises the number of buildings and people working and living on a site exposed to bushfire risk;  
  b. ensures the protection of life during the passage of a fire front; | Buildings and structures are:  
  a. not located on a ridgeline;  
  b. not located on land with a slope greater than 15% (see Overlay map - Landslide hazard);  
  c. dwellings are located on east to south facing slopes. |
c. is located and designed to increase the chance of survival of buildings and structures during a bushfire;
d. minimises bushfire risk from build up of fuels around buildings and structures;
e. ensure safe and effective access for emergency services during a bushfire.

**E56.2**

Buildings and structures have contained within the site:
a. a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
   i. to, and around, each building and other roofed structure; and
   ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

**PO57**

Development and associated driveways and access ways:
a. avoid potential for entrapment during a bushfire;
b. ensure safe and effective access for emergency services during a bushfire;
c. enable safe evacuation for occupants of a site during a bushfire.

**E57**

A length of driveway:
a. to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
b. has a maximum gradient no greater than 12.5%;
c. have a minimum width of 3.5m;
d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

**PO58**

**E58**
Development provides an adequate water supply for fire-fighting purposes.

- a. Areticulated watersupply is provided by a distributor retailer for the area or;
- b. Where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10,000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
- c. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access is provided to within 3m of that water storage source.
- d. Where a tank is the nominated on-site fire fighting water storage source, it includes:
  - i. A hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
  - ii. Fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

**PO59**

Development:

- a. Does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
- b. Does not present danger or difficulty to emergency services for emergency response or evacuation.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

**E59**

Development does not involve the manufacture or storage of hazardous chemicals.

**Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)**

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
Vegetation clearing, ecological value and connectivity

**PO60**

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

| a. | the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded; |
| b. | on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*. |

*Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No example provided.

**PO61**

No example provided.
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;
b. providing contiguous patches of habitat;
c. provide replacement and rehabilitation planting to improve connectivity;
d. avoiding the creation of fragmented and isolated patches of habitat;
e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

### Vegetation clearing and habitat protection

**PO62**

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No example provided.

**PO63**

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

No example provided.

**PO64**

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

a. providing contiguous patches of habitat;

No example provided.

### Vegetation clearing and soil resource stability

**PO65**

Development does not:

a. result in soil erosion or land degradation;

b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

### Vegetation clearing and water quality

**PO66**

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;

b. avoiding or minimising changes to landforms to maintain hydrological water flows;

c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry and animal keeping activities.

### PO67

Development minimises adverse impacts of stormwater run-off on water quality by:

a. minimising flow velocity to reduce erosion;

b. minimising hard surface areas;

c. maximising the use of permeable surfaces;

d. incorporating sediment retention devices;

### Vegetation clearing and access, edge effects and urban heat island effects

**PO68**

No example provided.
| PO69 | Development minimises potential adverse 'edge effects' on ecological values by:
|      | a. providing dense planting buffers of native vegetation between a development and environmental areas;
|      | b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
|      | c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;
|      | d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
|      | e. landscaping with native plants of local origin.

**Editor's note -** Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

| PO70 | Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:
|      | a. pervious surfaces;
|      | b. providing deeply planted vegetation buffers and green linkage opportunities;
|      | c. landscaping with local native plant species to achieve well-shaded urban places;
|      | d. increasing the service extent of the urban forest canopy.

| Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets | No example provided.

| PO71 | Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland | No example provided.
buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSESKoala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

### Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing noise impact assessment report is provided in Planning scheme policy – Noise.

<table>
<thead>
<tr>

<tr>
<td>Development does not create a new vehicle access point onto an Extractive resources transport route.</td>
</tr>
</tbody>
</table>
### E77.2
A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

### PO78
Development will:

| a. | not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building; |
| b. | protect the fabric and setting of the heritage site, object or building; |
| c. | be consistent with the form, scale and style of the heritage site, object or building; |
| d. | utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes; |
| e. | incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building; |
| f. | retain public access where this is currently provided. |

### E78
Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

### PO79
Demolition and removal is only considered where:

<tr>
<td><strong>d.</strong></td>
<td>demolition is performed following a catastrophic event which substantially destroys the building or object.</td>
</tr>
</tbody>
</table>

**PO80**

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No example provided.

**PO81**

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

**E81**

Development does:

a. not result in the removal of a significant tree;

b. not occur within 20m of a protected tree;

c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees.

**Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)**

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard.

**PO82**

Development:

a. maintains the safety of people and property on a site and neighbouring sites from landslides;

**E82**

Development does not:

a. involve earthworks exceeding 50m³;

b. involve cut and fill having a height greater than 600mm;
b. ensures the long-term stability of the site considering the full nature and end use of the development;  

c. ensures site stability during all phases of construction and development;  

d. minimises disturbance of natural drainage patterns of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater  

e. minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

**PO83**  
Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:  

a. minimising overuse of cut and fill to create single flat pads and benching;  

b. avoiding expanses of retaining walls, loss of trees and vegetation and interference with natural drainage systems;  

c. minimising any adverse visual impact on the landscape character;  

d. Protect the amenity of adjoining properties.

**E83**  
Buildings, excluding domestic outbuildings:  

a. are split-level, multiple-slab, pier or pole construction;  

b. are not single plane slab on ground.

**PO84**  
Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:  

a. the long-term stability of the development site considering the full nature and end use of the development;  

b. site stability during all phases of construction and development;  

c. the development is not adversely affected by landslide activity originating on sloping land above the site;  

d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

**E84**  
Development does not involve the manufacture, handling or storage of hazardous chemicals.
**PO85**
Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.

**E85.1**
Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous.

**E85.2**
Incineration or burial of waste within a Water supply buffer is not undertaken onsite.

**E85.3**
Solid waste within a Water supply buffer is collected and stored in weatherproof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

**E85.4**
Holding tanks within a Water supply buffer are used for all liquid waste and provide for the separation of oils/solvents and solids prior to pump-out and collection by a licenced contractor.

**E85.5**
Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

---

**PO86**
On-site sewerage systems within a Water supply buffer are designed and operated to ensure there is no worsening or adverse impacts to health risks, environmental risks and water quality.

**E86**
Secondary treated wastewater treatment systems within a Water supply buffer include:

a. emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging;

b. back up pump installation and backup power;

c. MEDLI modelling to determine irrigation rates and sizing of irrigation areas;

d. vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and

e. wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities.

---

</thead>
</table>
| Development for a Park (57) ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:  
  a. public benefit and enjoyment is maximised;  
  b. impacts on the asset life and integrity of park structures is minimised;  
  c. maintenance and replacement costs are minimised. | Development for a Park (57) ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design. |

### Riparian and wetland setbacks

<table>
<thead>
<tr>
<th>PO99</th>
<th>E99</th>
</tr>
</thead>
</table>
| Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:  
  a. impact on fauna habitats;  
  b. impact on wildlife corridors and connectivity;  
  c. impact on stream integrity;  
  d. impact of opportunities for revegetation and rehabilitation planting;  
  e. edge effects. | Development does not occur within:  
  a. 50m from top of bank for W1 waterway and drainage line  
  b. 30m from top of bank for W2 waterway and drainage line  
  c. 20m from top of bank for W3 waterway and drainage line  
  d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands. |

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

### Scenic amenity - Regionally significant (Hills) and Locally important (Coast) (refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)

<table>
<thead>
<tr>
<th>PO100</th>
<th>E100</th>
</tr>
</thead>
</table>
| Development:  
  a. avoids being viewed as a visually conspicuous built form on a hill top or ridgeline;  
  b. retain the natural character or bushland settings as the dominant landscape characteristic;  
  c. is viewed as being visually consistent with the natural landscape setting and does not diminish the scenic and visual qualities present in the environment. | Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not:  
  a. located on a hill top or ridge line;  
  b. all parts of the building and structure are located below the hill top or ridge line. |

<table>
<thead>
<tr>
<th>PO101</th>
<th>E101</th>
</tr>
</thead>
</table>
Development:

a. does not adversely detract or degrade the quality of views, vista or key landmarks;

b. retains the natural character or bushland settings as the dominant landscape characteristic.

Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

a. go across land contours, and do not cut straight up slopes;

b. follow natural contours, not resulting in batters or retaining walls being greater than 900mm in height.

**PO102**

Buildings and structures incorporate colours and finishes that:

a. are consistent with a natural, open space character and bushland environment;

b. do not produce glare or appear visual incompatible with the surrounding natural character and bushland environment;

c. are not visually dominant or detract from the natural qualities of the landscape.

**E102.1**

Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:

<table>
<thead>
<tr>
<th>Colours from Australian Standard AS2700s – 1996</th>
</tr>
</thead>
<tbody>
<tr>
<td>G12 – Holly G54 – Mist Green N 44 – Bridge Grey</td>
</tr>
<tr>
<td>G13 – Emerald G55 – Lichen N45 – Koala Grey</td>
</tr>
<tr>
<td>G14 – Moss Green G56 – Sage Green N52 – Mid Grey</td>
</tr>
<tr>
<td>G15 – Rainforest Green G62 – Rivergum N54 – Basalt</td>
</tr>
<tr>
<td>G16 – Traffic Green G64 – Slate N55 – Lead Grey</td>
</tr>
<tr>
<td>G17 – Mint Green G65 – Ti Tree X54 – Brown</td>
</tr>
<tr>
<td>G21 – Jade N25 – Birch Grey X61 – Wombat</td>
</tr>
<tr>
<td>G23 – Shamrock N33 – Lightbox Grey X63 – Iron Bark</td>
</tr>
<tr>
<td>G24 – Fern Green N35 – Light Grey Y51 – Bronze Olive</td>
</tr>
<tr>
<td>G25 – Olive N41 – Oyster Y61 – Black Olive</td>
</tr>
<tr>
<td>G34 – Avocado N42 – Storm Grey Y63 – Khaki</td>
</tr>
<tr>
<td>G52 – Eucalyptus N43 – Pipeline Grey Y66 – Mudstone</td>
</tr>
<tr>
<td>G53 – Banksia</td>
</tr>
</tbody>
</table>

**E102.2**

Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures are painted or finished such that reflectivity is less than 35%.

**PO103**

Landscaping

a. complements the coastal landscape character and amenity;

b. has known resilience and robustness in the coastal environment;

**E103**

Where located in the Locally Important (Coast) scenic amenity overlay:

a. landscaping comprises indigenous coastal species;

b. fences and walls are no higher than 1m; and
<table>
<thead>
<tr>
<th>Fences and walls:</th>
<th>Building design responds to the bayside location and complements the particular bayside character and amenity by adopting and incorporating a range of architectural character elements. Vegetation that contributes to bayside character and identity are:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. do not appear visually dominant or conspicuous within its setting;</td>
<td>a. retained;</td>
</tr>
<tr>
<td>b. reduce visual appearance through the use of built form articulation, setbacks, and plant screening;</td>
<td>b. protected from development diminishing their significance.</td>
</tr>
<tr>
<td>c. use materials and colours that are complementary to the coastal environment.</td>
<td></td>
</tr>
<tr>
<td>d. where over 12m in height, the building design includes the following architectural character elements:</td>
<td></td>
</tr>
<tr>
<td>i. curving balcony edges and walls, strong vertical blades and wall planes;</td>
<td></td>
</tr>
<tr>
<td>ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;</td>
<td></td>

</tr>
</tbody>
</table>
6.2.6 General residential zone code

6.2.6.1 Application - General residential zone

This code applies to undertaking development in the General residential zone, if:

1. the development has been categorised as either accepted development subject to requirements or assessable development - code assessment, and this code is identified as applicable to that development in the assessment benchmarks for assessable development and requirements for accepted development column of a table of assessment (Part 5);

2. the development has been categorised as assessable development - impact assessment (Part 5).

When using this code, reference should be made to section 5.3.2 Determining the category of development and category of assessment and, where applicable, section 5.3.3 Determining and applying the requirements for accepted development and the assessment benchmarks for assessable development located in Part 5.

For accepted development subject to requirements or assessable development under this Code:

1. Part A of the code applies only to accepted development subject to requirements in the 6.2.6.1 'Coastal communities precinct';

2. Part B of the code applies only to assessable development in the 6.2.6.1 'Coastal communities precinct';

3. Part C of the code applies only to accepted development subject to requirements in the 6.2.6.2 'Suburban neighbourhood precinct';

4. Part D of the code applies only to assessable development in the 6.2.6.2 'Suburban neighbourhood precinct';

5. Part E of the code applies only to accepted development subject to requirements in the 6.2.6.3 'Next generation neighbourhood precinct';

6. Part F of the code applies only to assessable development in the 6.2.6.3 'Next generation neighbourhood precinct';

7. Part G of the code applies only to accepted development subject to requirements in the 6.2.6.4 'Urban neighbourhood precinct';

8. Part H of the code applies only to assessable development in the 6.2.6.4 'Urban neighbourhood precinct'.

6.2.6.2 Purpose - General residential zone

1. The purpose of the General residential zone code is to provide for residential activities supported by a range of community uses and small-scale services, facilities and infrastructure that cater for local residents.

2. The purpose of the General residential zone is to provide mechanisms to promote and implement an appropriate mix of dwelling types across the coastal communities, suburban neighbourhood, next generation neighbourhood and urban neighbourhood precincts to accommodate a range of household sizes, age groups, socio-economic groups, cultures and ability levels within the community.

3. The purpose of the General residential zone is to implement the policy direction set out in Part 3, Strategic framework.

4. The General residential zone includes 4 precincts which have the following purpose:

   a. The Coastal Communities precinct provides for established coastal areas offering a lifestyle choice being characteristic of its location. New development will be generally infill, low-density scale and intensity, consistent with and complementary to the established settlement form prominent in these areas. These areas will have access to community services commensurate to the established populations.
b. The Suburban neighbourhood precinct provides low density, low intensity development. Detached Dwelling houses\(^{(22)}\) are therefore the predominant housing form. These areas will have access to community facilities and activities, day-to-day convenience retail and commercial uses, that are generally of a small scale and some public transport.

c. The Next generation neighbourhood precinct provides the greatest mix of dwelling types to support densities that are moderately higher than traditional suburban areas. Housing forms include detached dwellings on a variety of lot sizes with a greater range of attached dwellings and low to medium rise apartment buildings. These areas will have convenient access to centres, community facilities and higher frequency public transport.

d. The Urban neighbourhood precinct provides a mix of dwelling types and sizes with an emphasis on attached dwellings and apartment buildings. Medium to high density neighbourhoods are located within walking distance of a diverse range of services and facilities.

Editor's note - Subheadings may be used to differentiate between criteria for accepted development subject to requirements and assessable development. Alternatively, the code table may be broken up into further "parts" to assist with useability.

Editor's note - Further use of subheadings to identify criteria specific to a zone precinct or local plan precinct may be included.

Editor's note - Supporting material such as tables and figures may be used in support of the above assessment benchmark. These may be contained within the assessment column or referenced within the outcomes and located at the back of code.

Editor's note - Notes may be included within a performance outcome or acceptable example highlighting other legislation to be complied with. For example, an Australian standard to support an acceptable example or local laws, or providing guidance on interpretation of a performance outcome.
6.2.6.1 Coastal communities precinct

6.2.6.1.1 Purpose - Coastal communities precinct

The purpose of the code will be achieved through the following overall outcomes for the Coastal communities precinct:

a. Residential development in the Coastal communities of Donnybrook, Toorbul, Meldale, Dohles Rocks and Beachmere maintain the small-scale, low density character of coastal communities. The predominant form of development is low rise, detached dwellings on large residential lots.

b. Intensification of land uses in this precinct is not envisaged. Residential uses have a maximum site density of 15 dwellings per hectare.

c. The form and nature of future development is compatible with and recognise the key characteristics of the precinct.

d. New buildings within the Coastal communities precinct are provided with urban services.

e. New buildings achieve a high standard of amenity for residents and neighbours and maintain and enhance the vegetated and low intensity built character of the precinct.

f. Home based business can only be established where the scale and intensity of the activity does not detrimentally impact upon the character and amenity associated with the surrounding area. Specifically, Home based business does not include the sale or restoration of more than 4 vehicles in any calendar year or, undertake a mechanical repairs or panel beating activity associated with a business at the subject premises.

g. Community activities:
   i. do not negatively impact adjoining residents or the streetscape;
   ii. do not undermine the viability of existing or future centres.

h. Retail and commercial activities (excluding service stations):
   i. are clustered with other non-residential uses forming a neighbourhood hub;
   ii. are centred around a ‘Main Street’ central core fostering opportunities for social and economic exchange;
   iii. are of a small scale, appropriate for a neighbourhood hub;
   iv. do not negatively impact adjoining residents or the streetscape;
   v. are subordinate in function and scale to all centres within the region.

   Note - Retail and commercial uses expanding (into adjoining lots) into an existing local or district centre are to be assessed as out-of-centre development. Refer to the Centre zone code for relevant assessment criteria.

i. Service stations:
   i. establish where they will not disrupt, fragment or negatively impact active frontages (e.g. within a neighbourhood hub);
   ii. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;
   iii. establish in locations that will not have a negative impact on the street environments intended to include active frontages (e.g. Neighbourhood hubs or centres);
iv. do not negatively impact adjoining residents or the streetscape;

v. ancillary uses or activities only service the convenience needs of users.

j. The design, siting and construction of non-residential uses:

i. maintains a human scale, through appropriate building heights and form;

ii. provides attractive, active frontages that maximise pedestrian activity along road frontages, movement corridors and public spaces (excluding Service stations);

iii. provides for active and passive surveillance of road frontages, movement corridors and public spaces;

iv. promotes active transport options and ensures an oversupply of car parking is not provided;

v. locates car parking so as not to dominate the street;

vi. does not result in large internalised shopping centres (e.g. Large external blank walls with tenancies only accessible from within the building) surrounded by expansive areas of surface car parking.

j. General works associated with the development achieves the following:

i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground where possible), water and sewerage (where available);

ii. the development manages stormwater to:

A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;

B. prevent stormwater contamination and the release of pollutants;

C. maintain or improve the structure and condition of drainage lines and riparian areas;

D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;

iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

k. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

l. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

m. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

n. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;
B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;
vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

o. Development in the Coastal communities precinct includes one or more of the following:

- Child care centre
- Club
- Community care centre
- Community residence
- Community use
- Dwelling house
- Educational establishment
- Emergency services
- Health care services
- Home based business
- Place of worship
- Where in a Neighbourhood Hub:
  - Food and drink outlet
  - Hardware and trade supplies
  - Health care services
  - Indoor sport and recreation - for a gymnasium
  - Office
  - Service industry
  - Shop
  - Shopping centre
  - Veterinary services
  - Market

p. Development in the Coastal communities precinct does not include any of the following:

- Adult store
- Hospital
- Research and technology industry
### Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part A, Table 6.2.6.1.1. Where the development does not meet a requirement for accepted development (RAD) within Part A Table 6.2.6.1.1, the category of development changes to assessable development under the rules outlined in section 5.3.3.(1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

Part A—Requirements for accepted development - Coastal communities precinct

Table 6.2.6.1.1 Requirements for accepted development - Coastal communities precinct

<table>
<thead>
<tr>
<th>Requirements for accepted development</th>
</tr>
</thead>
<tbody>
<tr>
<td>General requirements</td>
</tr>
</tbody>
</table>
### Building height (Residential uses)

**RAD1** Building height does not exceed:
- a. that shown on Overlay map - Building heights; or
- b. for lots identified on 'Figure 6.2.6.1.1 Main Street Area', 15 metres; or
- c. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.

### Building height (Non-residential uses)

**RAD2** Building height does not exceed the maximum height identified on Overlay map - Building heights.

### Setbacks (Residential uses)

**RAD3** Setbacks comply with Table 6.2.6.1.3 - Setbacks (Residential uses).

> Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

### Site cover (Residential uses)

**RAD4** Site cover does not exceed 50% (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures).

### Lighting

**RAD5** Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

> Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.

### Clearing of habitat trees where not located in the Environmental areas overlay map

**RAD6** Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:
- a. Clearing of a habitat tree located within an approved development footprint;
- b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a ‘habitat tree’. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

### Works-requirements

#### Utilities

**RAD7** Where available, the development is connected to:-

- an existing reticulated electricity supply;
- telecommunications and broadband;
- reticulated sewerage;
- reticulated water;
- sealed and dedicated road.

Development is provided with an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).

**RAD8** Where involving an extension (building work) in front of the main building line and where the lot adjoins or is opposite to a park*, foreshore or Humpybong Reserve, all existing overhead power lines are to be undergrounded for the full frontage of the lot.

#### Access

**RAD** The frontage road is fully constructed to Council’s standards.

Note - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - Frontage roads include streets where no direct lot access is provided.

**RAD9** Any new or changes to existing direct vehicle access for residential development does not occur from arterial or sub-arterial roads.

**RAD10** Any new or changes to existing site access crossovers and driveways are designed, and located and constructed in accordance with:

- where for a Council-controlled road and associated with a Dwelling house:
  - Planning scheme policy - Integrated design;
b. where for a Council-controlled road: and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

### RAD11
Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

### RAD
Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

### Stormwater

#### RAD12
Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

#### RAD13
Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

a. is for urban purposes only;

b. involves a land area greater than 2500m²;

c. will result in 6 or more dwellings;

OR

will result in an impervious area greater than 25% of the net developable area.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and

b. that results in 6 or more dwellings; or

c. that result in an impervious area greater than 25% of the net developable area;

incorporates a 'deemed to comply solution' to manage stormwater quality.
Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design: Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland and Planning scheme policy - Integrated design.

### Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated:

**Note** - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

### Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties:

**Note** - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

### Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with Sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits.</td>
</tr>
</tbody>
</table>

**Note** - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

**Note** - Refer to Planning scheme policy - Integrated design (Appendix C) for easement requirements over open channels.

### Site works and construction management

#### RAD14

The site and any existing structures are to be maintained in a tidy and safe condition.

#### RAD15

*Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines; Planning scheme policy—Stormwater management and Planning scheme policy—Integrated design.*

Development does not cause erosion or allow sediment to leave the site.

**Note** - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation.
<table>
<thead>
<tr>
<th>RAD</th>
<th>No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD</td>
<td>Existing street trees are protected and not damaged during works. Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented.</td>
</tr>
<tr>
<td>RAD18</td>
<td>Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.</td>
</tr>
<tr>
<td>RAD16</td>
<td>Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.</td>
</tr>
<tr>
<td>RAD19</td>
<td>Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.</td>
</tr>
<tr>
<td>RAD17</td>
<td>All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.</td>

<tr>
<td></td>
<td>a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;</td>
</tr>
<tr>
<td></td>
<td>b. no work is to be carried out on Sundays or public holidays.</td>
</tr>
<tr>
<td>Earthworks</td>
<td></td>
</tr>
<tr>
<td>RAD21</td>
<td>The total of all cut and fill on-site does not exceed 900mm in height.</td>
</tr>
<tr>
<td></td>
<td>Figure—Cut and Fill</td>
</tr>
</tbody>
</table>
Note—This is site earthworks not building work.

Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

RAD

Cut and fill batters, (other than batters to dams and water impoundments), have a finished slope no steeper than the following:
**6 Zones**

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>any cut batter is no steeper than 1V in 4H;</td>
</tr>
<tr>
<td>b.</td>
<td>any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;</td>
</tr>
<tr>
<td>c.</td>
<td>any compacted fill batter is no steeper than 1V in 4H;</td>
</tr>
</tbody>
</table>

**RAD**  
All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**RAD**  
Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

*Note - Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.*

**RAD**  
All fill and excavation is contained on-site and is free draining.

**RAD**  
Earthworks undertaken on the development site are shaped in a manner which does not:

a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
b. redirect stormwater surface flow away from existing flow paths; or
c. divert stormwater surface flow onto adjacent land (other than a road) in a manner which:
   i. concentrates the flow; or
   ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
   iii. causes actionable nuisance to any person, property or premises.

**RAD**  
All fill placed on-site is:

a. limited to that necessary for the approved use;

b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill;

**RAD20**  
The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

*Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.*

**RAD**  
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

*Note - Public sector entity is defined in Schedule 2 of the Act.*

**RAD22**  
Filling or excavation that would result in any of the following is not carried out on site: does not result in:

a. reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Schedule 2 of the Act.

### Fire services

Note - The provisions under this heading only apply if:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>the development is for, or incorporates:</td>
</tr>
<tr>
<td></td>
<td>i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or</td>
</tr>
<tr>
<td></td>
<td>ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or</td>
</tr>
<tr>
<td></td>
<td>iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or</td>
</tr>
<tr>
<td></td>
<td>iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

AND

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>b.</td>
<td>none of the following exceptions apply:</td>
</tr>
<tr>
<td></td>
<td>i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or</td>
</tr>
<tr>
<td></td>
<td>ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.</td>
</tr>
</tbody>
</table>

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

### RAD23

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;</td>
</tr>
<tr>
<td>b.</td>
<td>in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);</td>
</tr>
<tr>
<td>c.</td>
<td>in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:</td>
</tr>
<tr>
<td></td>
<td>i. - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;</td>
</tr>
<tr>
<td></td>
<td>ii. - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;</td>
</tr>
<tr>
<td></td>
<td>iii. - for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities; and</td>
</tr>
<tr>
<td></td>
<td>d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.</td>
</tr>
</tbody>
</table>
A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

   i. the overall layout of the development (to scale);
   ii. internal road names (where used);
   iii. all communal facilities (where provided);
   iv. the reception area and on-site manager’s office (where provided);
   v. external hydrants and hydrant booster points;
   vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

a. in a form;

b. of a size;

c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific requirements

Home based business(s)

RAD28 Home based business(s) are fully enclosed within the existing dwelling or on-site structure.

RAD29 A maximum of 1 employee (not a resident) OR 2 customers OR customers from within 1 Small rigid vehicle (SRV) or smaller are permitted on the site at any one time.
<table>
<thead>
<tr>
<th>RAD30</th>
<th>Service and delivery vehicles do not exceed one Small rigid vehicle (SRV) at any one time.</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD31</td>
<td>Vehicle parking for the Home based business[^35] on-site is limited to 1 car or Small rigid vehicle (SRV).</td>
</tr>
<tr>
<td>RAD32</td>
<td>Home based business(s)[^35] occupy an area of the existing dwelling or on-site structure not greater than 40m² GFA.</td>
</tr>
</tbody>
</table>
| RAD33 | Home based business(s)[^35] do not involve manufacturing.  
Note - Manufacturing as defined in the Food Act 2006 is permitted. Food businesses that are licensable by local government and only involve the manufacturing of non-potentially hazardous food are permitted. Definitions in the Food Act 2006 apply to this note. |
| RAD34 | The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances. |
| RAD35 | The hours of operation do not exceed 8:00am to 6:00pm, Monday to Saturday and are not open to the public on Sunday's, Christmas Day, Good Friday and Anzac Day.  
Note - Office or administrative activities that do not generate non-residents visiting the site, such as book-keeping and computer work, may operate outside the hours of operation. |
| RAD36 | For a bed and breakfast, the use:  
a. is fully contained within the existing dwelling on-site;  
b. occupies a maximum of 2 bedrooms;  
c. includes the provision of a minimum of 1 meal per day;  
d. accommodates a maximum of 6 people at any one time.  
Note - For a Bed and Breakfast RAD28 - RAD34 above do not apply. |
| Telecommunications facility[^81] | Editor's note - In accordance with the Federal legislation Telecommunications facilities[^81] must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3KHz to 300GHz.  
A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.  
The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.  
Equipment shelters and associated structures are located:  
a. directly beside the existing equipment shelter and associated structures;  
b. behind the main building line;  
[^35]: Home based business(es) limit |
c. further away from the frontage than the existing equipment shelter and associated structures;
d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

RAD39 Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.

RAD40 The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

RAD41 A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.

RAD42 All equipment comprising the telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Retail, commercial and community uses

RAD43 Where involving an extension (building work) in the front setback a minimum of 50% of the front facade of the building is made up of windows or glazing between a height of 1m and 2m. The minimum window/glazing is to remain uncovered and free of signage. Any tinting, signage or vinyl wrap applied to a glazed facade located at ground floor level is to maintain visibility of the internal activity from the street and not obscure surveillance of the street.

Figure - Glazing

RAD44 Development does not result in a reduction in the number or standard of car parking spaces provided on the site except where a reduction is required for the provision of cycle parking.

RAD45 Where additional car parking spaces are provided they are not located between the frontage and the main building line.

RAD46 Where involving an extension (building work), bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste.
**RAD47**  Where involving an extension (building work) it does not result in a reduction in the amount or standard of established landscaping on-site.

**RAD48**  Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of *Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting*.

Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day.

**RAD49**  Hours of operation do not exceed 6:00am to 9:00pm Monday to Sunday.

**RAD**  Development does not involve a drive through facility.

### Values and constraints requirements

Note - The relevant values and constraints requirements do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

**RAD50**  Development does not involve:

a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or

b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD.

![Diagram of Surface Elevation](image)

### Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

RAD51 Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house(22) or extension to an existing dwelling house(22) only on lots less than 750m².

Editor's note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor's note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;
ii. be the least valued area of koala habitat on the site;
iii. minimise the footprint of the development envelope area;
iv. minimise edge effects to areas external to the development envelope;
v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;
vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

RAD52 No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:
### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

| RAD53 | Development is for the preservation, maintenance, repair and restoration of the site, object or building. This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character. |
| RAD54 | A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan. This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character. |
| RAD55 | Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character. |
| RAD56 | The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:
   - a. construction of any building;
   - b. laying of overhead or underground services;
   - c. any sealing, paving, soil compaction;
   - d. any alteration of more than 75mm to the ground surface level prior to work commencing. |
| RAD57 | Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees. |
| RAD58 | Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area. |
| RAD59 | Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.  
   
   Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.  
   
   Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow |
| RAD60 | Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable. |
| RAD61 | Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area. |
| RAD62 | Development for a material change of use or building work for a Park\(^{(57)}\) ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design. |

**Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following requirements apply)**

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

| RAD63 | No development is to occur within:  
   
   a.  50m from top of bank for W1 waterway and drainage line  
   
   b.  30m from top of bank for W2 waterway and drainage line  
   
   c.  20m from top of bank for W3 waterway and drainage line  
   
   d.  100m from the edge of a Ramsar wetland, 50m from all other wetlands.  
   
   Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.  
   
   Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.  
   
   Note - The minimum setback distance applies to the each side of waterway. |

**Transport noise corridors (refer Overlay map - Transport noise corridors)**

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code.
Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part B, Table 6.2.6.1.2 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessable, the assessment benchmarks become the whole of the planning scheme.

Table 6.2.6.1.2 Assessable development - Coastal communities precinct

</thead>
<tbody>
<tr>
<td><strong>Density</strong></td>
<td></td>
</tr>
<tr>
<td>PO1</td>
<td></td>
</tr>
<tr>
<td>Residential development:</td>
<td></td>
</tr>
<tr>
<td>a. contributes to the coastal community character consisting primarily of low-density, detached dwellings as the predominant built form;</td>
<td></td>
</tr>
<tr>
<td>b. has a maximum site density of 15 dwellings per ha (excluding dual occupancies) or for lots identified on 'Figure 6.2.6.1.1 Main Street Area' a maximum site density of 75 dwellings per ha.</td>
<td></td>
</tr>
<tr>
<td>No example provided.</td>
<td></td>
</tr>
<tr>
<td><strong>Building height (Residential uses)</strong></td>
<td></td>
</tr>
<tr>
<td>PO2</td>
<td></td>
</tr>
<tr>
<td>Buildings and structures have a height that:</td>
<td></td>
</tr>
<tr>
<td>a. is consistent with the existing low rise character predominant in the Coastal communities precinct;</td>
<td></td>
</tr>
<tr>
<td>b. responds to the topographic features of the site including slope and orientation;</td>
<td></td>
</tr>
<tr>
<td>c. is not visually dominant or overbearing with respect to the streetscape and the wider receiving environment, street conditions (e.g. street width) or adjoining properties;</td>
<td></td>
</tr>
<tr>
<td>d. positively contributes to the existing built form of the surrounding area;</td>
<td></td>
</tr>
<tr>
<td>e. responds to the height of development on adjoining land where contained within another precinct or zone.</td>
<td></td>
</tr>
<tr>
<td>E2</td>
<td>Building height does not exceed:</td>
</tr>
<tr>
<td>a. that shown on Overlay map - Building heights; or</td>
<td></td>
</tr>
<tr>
<td>b. for lots identified on 'Figure 6.2.6.1.1 Main Street Area', 15 metres; or</td>
<td></td>
</tr>
<tr>
<td>c. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.</td>
<td></td>
</tr>
</tbody>
</table>
**Building height (Non-residential uses)**

**PO3**
The height of non-residential buildings does not adversely affect amenity of the area or of adjoining properties and positively contributes to the intended built form of the surrounding area.

Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height, setbacks, site cover, building bulk and mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution.

**E3**
Building height does not exceed the maximum height identified on Overlay map - Building heights except for architectural features associated with religious expression on Place of worship\(^{(60)}\) and Educational establishment\(^{(24)}\) buildings.

**Setbacks (Residential uses)**

**PO4**
Residential buildings and structures are setback to:

a. be consistent with the predominant prevailing setbacks in the area where buildings are generally positioned further away from the street and further apart from each other;

b. result in development not being visually dominant or overbearing with respect to the streetscape and the adjoining properties;

c. maintain private open space areas that are of a size and dimension to be usable and functional;

d. maintain the privacy of adjoining properties.

Note - Refer to Planning scheme policy - Residential design for details and examples.

**E4**
Setbacks comply with Table 6.2.6.1.3 'Setbacks' - Setbacks (Residential uses).

Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

**Setbacks (Non-residential uses)**

**PO5**
Front setbacks ensure non-residential buildings address and actively interface with streets and public spaces.

**E5.1**
For the primary street frontage, buildings are constructed:

a. to the property boundary; or

b. setback a maximum of 3m from the property boundary, where for the purpose of outdoor dining.

**E5.2**
For the secondary street frontage, setbacks are consistent with adjoining buildings.
### PO6
Side and rear setbacks cater for driveway(s), services, utilities and buffers required to protect the amenity of adjoining sensitive land uses and the development will not be visually dominant or overbearing with respect to adjoining properties.

### Site cover (Residential uses)

#### PO7
Residential buildings and structures will ensure that site cover:

a. does not result in a site density that is inconsistent with the character of the area;

b. does not result in an over development of the site;

c. does not result in other elements of the site being compromised (e.g. Setbacks, open space etc);

d. reflects the detached, low density, low intensity coastal community character.

Note - Refer to Planning scheme policy - Residential design for details and examples.

#### E7
Site cover does not exceed 50% (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures).

### Movement network

#### PO
Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

#### E
Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

### Water sensitive urban design

#### PO8
Best practice Water Sensitive Urban Design (WSUD) is incorporated within development sites adjoining street frontages to mitigate impacts of stormwater run-off in accordance with Planning scheme policy - Integrated design.

No example provided.
## Sensitive land use separation

<table>
<thead>
<tr>
<th>PO9</th>
<th>Development is designed and operated to ensure that:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensitive land uses within 250m of land in the Industry zone - General industry precinct must mitigate any potential exposure to industrial air, noise or odour emissions that impact on human health, amenity and wellbeing.</td>
<td></td>
</tr>
<tr>
<td>E9</td>
<td>Development is designed and operated to ensure that:</td>
</tr>
<tr>
<td>it meets the criteria outlined in the Planning Scheme Policy–Noise; and</td>
<td></td>
</tr>
<tr>
<td>the air quality objectives in the <em>Environmental Protection (Air) Policy 2008</em>, are met.</td>
<td></td>
</tr>
</tbody>
</table>

### Amenity

<table>
<thead>
<tr>
<th>PO10</th>
<th>No example provided.</th>
</tr>
</thead>
<tbody>
<tr>
<td>The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.</td>
<td></td>
</tr>
</tbody>
</table>

### Noise

<table>
<thead>
<tr>
<th>PO11</th>
<th>No example provided.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noise generating uses do not adversely affect existing or potential noise sensitive uses.</td>
<td></td>
</tr>
</tbody>
</table>

### PO12

<table>
<thead>
<tr>
<th>Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);</td>
</tr>
<tr>
<td>b. maintaining the amenity of the streetscape.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>E12.1</th>
<th>Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noise attenuation structures (e.g. walls, barriers or fences):</td>
<td></td>
</tr>
<tr>
<td>a. are not visible from an adjoining road or public area unless:</td>
<td></td>
</tr>
<tr>
<td>i. adjoining a motorway or rail line; or</td>
<td></td>
</tr>
<tr>
<td>ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.</td>
<td></td>
</tr>
</tbody>
</table>

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.
b. do not remove existing or prevent future active transport routes or connections to the street network;

c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

### Clearing of habitat trees where not located within the Environmental areas overlay map

**PO13**

a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.

c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

### Works criteria

#### Utilities

**PO**

All services including water supply, sewage disposal, electricity, street lighting, telecommunications and gas (if available) are provided in accordance with Planning scheme policy - Integrated design (Appendix A).

No example provided:

**PO14**

Where the site adjoins or is opposite to a Park(“), foreshore or Humpybong Reserve all existing overhead power lines are to be undergrounded for the full frontage of the site:

No example provided:

<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>PO22</th>
<th>E22.1</th>
</tr>
</thead>
</table>
The layout of the development does not compromise:

a. the development of the road network in the area;

b. the function or safety of the road network;

c. the capacity of the road network.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Direct vehicle access for residential development does not occur from arterial or sub-arterial roads or a motorway.

Editor's note - Residential developments should consider amalgamation with the lot to the rear and gaining access via a laneway.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

E22.2

The development provides for the extension of the road network in the area in accordance with Council's road network planning.

E22.3

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.

E22.4

The development layout allows forward vehicular access to and from the site.

PO23

Safe access is provided for all vehicles required to access the site.

E23.1

Site access and driveways are designed and located and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. Where for a Council-controlled road, and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off-street car parking;
   ii. AS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
### E23.2

Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking;

b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities;

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

### E23.3

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

### E

**Landscaping (including shade trees)** is provided within car parks in accordance with Planning scheme policy - Integrated design.

### PO

Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

**Editor's Note** - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

### E

Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

**Note** - The road network is mapped on Overlay Map - Road Hierarchy.

### PO

Roads which provide access to the site from an arterial or sub-arterial road remain trafficable during major storm events without flooding or impacting upon residential properties or other premises.

### E

Access roads to the development have sufficient longitudinal and cross drainage to remain safely trafficable during major storm (1% AEP) events.

**Note** - The road network is mapped on Overlay map - Road hierarchy.

**Note** - Refer to QUDM for requirements regarding trafficability.
### Street design and layout

**PO**

Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:

a. access to premises by providing convenient vehicular movement for residents between their homes and the major road network;

b. safe and convenient pedestrian and cycle movement;

c. adequate on street parking;

d. stormwater drainage paths and treatment facilities;

e. efficient public transport routes;

f. utility services location;

g. emergency access and waste collection;

h. setting and approach (streetscape, landscaping and street furniture) for adjoining residences;

i. expected traffic speeds and volumes; and

j. wildlife movement.

Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.

**PO24**

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
b. ensure the orderly and efficient continuation of the active transport network;

c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or -

ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- Development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- Forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m2 Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m2 GFA;

of the last stage of the development. Detailed design is to be in accordance with Planning scheme policy - Integrated design.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.
- Warehouses and Industry greater than 6000m² GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissects or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

### PO

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

### E

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

### E

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. Where the through road provides an access or residential street function:
   i. intersecting road located on same side = 60 metres; or
   ii. intersecting road located on opposite side = 40 metres.

b. Where the through road provides a local collector or district collector function:
   i. intersecting road located on same side = 100 metres; or
   ii. intersecting road located on opposite side = 60 metres.
c. Where the through road provides a sub-arterial function:
   i. intersecting road located on same side = 250 metres; or
   ii. intersecting road located on opposite side = 100 metres.

d. Where the through road provides an arterial function:
   i. intersecting road located on same side = 350 metres; or
   ii. intersecting road located on opposite side = 150 metres.

e. Walkable block perimeter does not exceed:
   i. 600 metres in the Coastal communities precinct and Suburban neighbourhood precinct;
   ii. 500 metres in the Next generation neighbourhood precinct;
   iii. 400 metres in the Urban neighbourhood precinct.

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (ie, left in/left out only) at intersections with sub-arterial roads or arterial roads.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO.

PO

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

### Stormwater

<table>
<thead>
<tr>
<th>PO</th>
<th>Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient.</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design.</td>
</tr>
<tr>
<td>E</td>
<td>Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM.</td>
</tr>
<tr>
<td>E</td>
<td>Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM.</td>
</tr>
</tbody>
</table>
Note - Development is to provide roof and allotment (inter-allotment – QUDM level III) drainage, including bunds, to all lots that have a gradient less than 1 in 100 (for the whole of the allotment) to the road. The inter-allotment drainage system (including easements) is provided in accordance with Planning scheme policy - Integrated design (Appendix C).

PO
Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment.

E
The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site.

E
The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots.

E
Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas.

E
The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel.

Note - Refer to QUDM for recommended average flow velocities.

PO
Provide measures to properly manage surface flows for the 1% AEP event (for the fully developed catchment) draining to and through the land to ensure no actionable nuisance is created to any person or premises as a result of the development. The development must not result in ponding on adjacent land, redirection of surface flows to other premises or blockage of a surface flow relief path for flows exceeding the design flows for any underground system within the development.

E
The stormwater drainage system is designed and constructed in accordance with Planning scheme policy - Integrated design.

E
Stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises.

No example provided.

Note - Refer to Planning scheme policy - Integrated design for details.

</thead>
<tbody>
<tr>
<td>Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.</td>
<td>Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 2 of the SPP.</td>
</tr>
</tbody>
</table>

---

**Where development:**

a. **is for an urban purpose that involves a land area 2500m² or greater in size; and**

b. **results in 6 or more dwellings; or**

c. **results in an impervious area greater than 25% of the net developable area,**

---

**Note:** A suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater management.

---

**Note:** A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be design in accordance with Planning scheme policy - Integrated Design (Appendix C).
PO28

Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;

b. overland flow paths where they cross more than one property boundary.

Note—Refer to Planning scheme policy—Integrated design for details.

Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</td>
</tr>
</tbody>
</table>

Note—Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note—Refer to Planning Scheme Policy—Integrated Design (Appendix C) for easement requirements over open channels.

PO

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

No example provided.

PO

Council is provided with accurate representations of the completed stormwater management works within residential developments.

E

"As Built" drawings and specifications of the stormwater management devices certified by an RPEQ is provided.

Note — Documentation is to include:

a. photographic evidence and inspection date of the installation of approved underdrainage;

b. copy of the bioretenion filter media delivery docket/quality certificates confirming the materials comply with specifications in the approved Stormwater Management Plan;

c. date of the final inspection.

</table>

Note: The measures are adjusted on-site to maximise their effectiveness.

<table>
<thead>
<tr>
<th>E30.3</th>
<th></th>
</tr>
</thead>
</table>
The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

**E30.4**

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

**Existing street trees are protected and not damaged during works.**

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.

**PO31**

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

**E31**

No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

**PO32**

All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

**E32.1**

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**E32.2**

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

**E32.3**

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.

Note - A Traffic Management Plan may be required to demonstrate compliance with this PO. A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

Note - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less, and:

a. the aggregate volume of imported or exported material is greater than 1000m³; or

b. the aggregate volume of imported or exported material is greater than 200m³ per day; or

c. the proposed haulage route involves a vulnerable land use or shopping centre.
Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.

Editor's note - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Note - A dilapidation report may be required to demonstrate compliance with this E.

E

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

E

Access to the development site is obtained via an existing lawful access point.

PO33

All disturbed areas are to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

E33

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. grassed stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.
**Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).**

### Earthworks

**PO36**

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- the natural topographical features of the site;
- short and long-term slope stability;
- soft or compressible foundation soils;
- reactive soils;
- low density or potentially collapsing soils;
- existing fill and soil contamination that may exist on-site;
- the stability and maintenance of steep rock slopes and batters;
- excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

**Note:** Filling or excavation works are to be completed within six months of the commencement date.

**E36.1**

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**E36.2**

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

**E36.3**

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

**E36.4**

All fill batters steeper than 1 (V) in 6 (H) on residential lots are fully turfed to prevent scour and erosion.

**E36.5**

All filling or excavation is contained on-site and is free draining.

**E36.6**

All fill placed on-site is:

- limited to that area required for the necessary for the approved use;
- clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill).

**E36.7**

The site is prepared and the fill placed on-site in accordance with AS3798.
### PO37

**Embarkments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.**

### E37

**Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.**

*Figure - Embankment*

### PO38

**Filling or excavation is undertaken in a manner that:**

a. **does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;**

b. **does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes.**

*Note - Public sector entity as is defined in Schedule 2 of the Act Sustainable Planning Act 2009.*

### E38.1

**No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.**

*Note - Public sector entity as is defined in Schedule 2 of the Act Sustainable Planning Act 2009.*

### E38.2

**Filling or excavation that would result in any of the following is not carried out on-site:**

a. **a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;**

b. **an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken;**

c. **prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.**

*Note - Public sector entity as is defined in Sustainable Planning Schedule 2 of the Act 2009.*

### PO39

**Filling or excavation does not result in land instability.**

### No example provided.
Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

Figure—Retaining on boundary

![Diagram of Retaining on boundary]

c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;

d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal: terraced, landscaped and drained as shown below:

Figure—Cut

![Diagram of Cut]

Figure—Fill

![Diagram of Fill]
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;

c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND
b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO42
Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;
b. is appropriate for the size, shape and topography of the development and its surrounds;
c. is compatible with the operational equipment available to the fire fighting entity for the area;
d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
e. considers the fire hazard inherent in the surrounds to the development site;
f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E42.1
External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (54) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;
   d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E42.2
A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

E42.3
On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

<tr>
<td><strong>E47.2</strong></td>
</tr>
<tr>
<td>h. landscaped;</td>
</tr>
<tr>
<td>i. otherwise consistent with the amenity and character of the zone and surrounding area.</td>
</tr>
</tbody>
</table>

**PO48**

Infrastructure does not have an impact on pedestrian health and safety.

**E48**

Access control arrangements:

a. do not create dead-ends or dark alleyways adjacent to the infrastructure;

b. minimise the number and width of crossovers and entry points;

c. provide safe vehicular access to the site;

d. do not utilise barbed wire or razor wire.

**PO49**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

a. generates no audible sound at the site boundaries where in a residential setting; or

b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**E49**

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

### Retail, commercial and community uses

**PO50**

Community activities:

a. are located to:

   i. cluster with other non-residential activities to form a neighbourhood hub (this may include being located within or adjacent to an existing neighbourhood hub); or

   ii. establishing a new neighbourhood hub (as described in the PO below) on a main street;

b. are located on allotments that have appropriate area and dimensions for the siting of:

   i. buildings and structures;

   ii. vehicle servicing, deliveries, parking, manoeuvring and circulation;

   iii. landscaping and open space including buffering;

c. are of a small scale, having regard to the surrounding character;

No example provided.
d. are serviced by public transport;

e. do not negatively impact adjoining residents or the streetscape.

**PO51**
The expansion (into adjoining lots) of existing neighbourhood hubs or the establishment of a new neighbourhood hub does not occur.

**PO**
Service stations are located, designed and orientated to:

a. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;

b. be in proximity of a neighbourhood hub or centre;

c. not negatively impact active streets, public spaces or hubs of activity where the pedestrian safety and comfort is of high importance (e.g. in neighbourhood hubs and centres);

d. not result in the fragmentation of active streets (e.g. site where active uses are located on adjoining lots);

e. ensure the amenity of adjoining properties is protected;

f. reduce the visual impact of the Service station from the streetscape while maintaining surveillance from the site to the street;

g. minimise impacts on adjoining residential uses, to a level suitable relative to expected residential amenity of the area. (e.g. high order road in urban or next generation neighbourhood, likely to be noisy and not like suburban);

h. provide ancillary uses that meet the convenience needs of users;

**E**
Service stations are located:

a. adjoining or within 400m of:

i. a neighbourhood hub identified on Overlay map - Community activities and neighbourhood hubs (not on a neighbourhood hub lot), or

ii. a centre zone;

b. on the corner lot of an arterial or sub-arterial road.

Service stations are designed and orientated on site to:

a. include a landscaping strip having a minimum depth of 1m adjoining all road frontages;

b. building and structures (including fuel pump canopies) are setback a minimum of 3m from the primary and secondary frontage and a minimum of 5m from side and rear boundaries;

c. include a screen fence, of a height and standard in accordance with a noise impact assessment (Note - Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise), on side and rear boundaries where adjoining land is able to contain a residential use;

d. not include more than 2 driveway crossovers.

**PO52**
Non-residential uses (excluding a Service station) address and activate streets and public spaces by:

a. ensuring buildings and individual tenancies address street frontage(s), civic space and other areas of pedestrian movement;

b. new buildings adjoin or are within 3m of the primary frontage(s), civic space or public open space;

c. locating car parking areas and drive through facilities behind or under buildings to not dominate the street environment;

No example provided.
<table>
<thead>
<tr>
<th></th>
<th>Establishing and maintaining interaction, pedestrian activity and casual surveillance through appropriate land uses and building design (e.g. The use of windows or glazing and avoiding blank walls with the use of sleeving);</th>
</tr>
</thead>
<tbody>
<tr>
<td>e.</td>
<td>Providing visual interest to the façade (e.g. Windows or glazing, variation in colours, materials, finishes, articulation, recesses or projections);</td>
</tr>
<tr>
<td>f.</td>
<td>Establishing and maintaining human scale.</td>
</tr>
</tbody>
</table>

**PO53**

All buildings exhibit a high standard of design and construction, which:

| a. | Add visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, cantilevered awning); |
| b. | Enable differentiation between buildings; |
| c. | Contribute to a safe environment; |
| d. | Incorporate architectural features within the building facade at the street level to create human scale (e.g. cantilevered awning); |
| e. | Included building entrances that are readily identifiable from the road frontage; |
| f. | Locate and orientate to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites; |
| g. | Incorporate appropriate acoustic treatments, having regard to any adjoining residential uses; |
| h. | Facilitate casual surveillance of all public spaces. |

**PO54**

Development provides functional and integrated car parking and vehicle access, that:

| a. | Prioritises the movement and safety of pedestrians between the street frontage and the entrance to the building; |
| b. | Provides safety and security of people and property at all times; |
| c. | Does not impede active frontage and active transport options; |

No example provided.
d. does not impact on the safe and efficient movement of traffic external to the site;

e. is consolidated and shared with adjoining sites wherever possible.

**PO55**

The safety and efficiency of pedestrian movement is prioritised in the design of car parking areas through providing pedestrian paths in car parking areas that are:

a. located along the most direct route between building entrances, car parks and adjoining uses;

b. protected from vehicle intrusion through the use of physical and visual separation (e.g. wheel stops, trees etc);

c. are of a width to allow safe and efficient access for prams and wheelchairs.

**PO56**

The number of car parking spaces is managed to:

a. avoid significant impacts on the safety and efficiency of the road network;

b. avoid an oversupply of car parking spaces;

c. avoid the visual impact of large areas of open car parking from road frontages and public areas;

d. promote active and public transport options;

e. promote innovative solutions, including on-street parking and shared parking areas.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

**E56.1**

Car parking is provided in accordance with Schedule 7 - Car parking.

Note - The above rates exclude car parking spaces for people with a disability required by Disability Discrimination Act 1992 or the relevant disability discrimination legislation and standards.

**E56.2**

All car parking areas are designed and constructed in accordance with Australian Standard AS 2890.1 Parking facilities Part 1: Off-street car parking.

**PO57**

a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

   i. adequate bicycle parking and storage facilities; and

**E57.1**

Minimum bicycle parking facilities are provided in accordance with the table below (rounded up to the nearest whole number).

<table>
<thead>
<tr>
<th>Use</th>
<th>Minimum Bicycle Parking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential uses comprised of dwellings</td>
<td>Minimum 1 space per dwelling</td>
</tr>
</tbody>
</table>
ii. adequate provision for securing belongings; and

iii. change rooms that include adequate showrooms, sanitary compartments, wash basins and mirrors.

b. Notwithstanding a, there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

i. the projected population growth and forward planning for road upgrading and development of cycle paths; or

ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or

iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor’s note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

<table>
<thead>
<tr>
<th>All other residential uses</th>
<th>Minimum 1 space per 2 car parking spaces identified in Schedule 7 – car parking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-residential uses</td>
<td>Minimum 1 space per 200m2 of GFA</td>
</tr>
</tbody>
</table>

E57.2

Bicycle parking is:

a. provided in accordance with *Austroads (2008), Guide to Traffic Management - Part 11: Parking*;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council’s assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the examples under this heading meet the current performance requirement prescribed in the Queensland Development Code.

Editor’s note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

E57.3

For non-residential uses, storage lockers:

a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.
Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E57.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>

<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
<tr>
<td></td>
<td>Male</td>
<td>1</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>1 urinal and 1 closet pan, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:

i. a mirror located above each wash basin;

ii. a hook and bench seating within each shower compartment;

iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance.

### Telecommunications facility

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

| PO64 | Telecommunications facilities are co-located with existing telecommunications facilities, Utility installation, Major electricity infrastructure or Substation if there is already a facility in the same coverage area. |
| E64.1 | New telecommunication facilities are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures. |
| E64.2 | If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site. |

| PO65 | A new Telecommunications facility is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future. |
| E65 | A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility. |

| PO66 | Telecommunications facilities do not conflict with lawful existing land uses both on and adjoining the site. |
| E66 | The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval. |

| PO67 |  |
| E67.1 |  |
The Telecommunications facility\(^{(81)}\) does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;
b. visually integrated with the surrounding area;
c. not visually dominant or intrusive;
d. located behind the main building line;
e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
f. camouflaged through the use of colours and materials which blend into the landscape;
g. treated to eliminate glare and reflectivity;
h. landscaped;
i. otherwise consistent with the amenity and character of the zone and surrounding area.

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

### E67.2

In all other areas towers do not exceed 35m in height.

### E67.3

Towers, equipment shelters and associated structures are of a design, colour and material to:

a. reduce recognition in the landscape;
b. reduce glare and reflectivity.

### E67.4

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

### E67.5

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

### E67.6

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

---

### PO68

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

### E68

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

---

### PO69

---

### E69
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

All equipment comprising the Telecommunications facility[^1] which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

### Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

**PO70**

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
- b. protects the environmental and ecological values and health of receiving waters;
- c. protects buildings and infrastructure from the effects of acid sulfate soils.

**E70**

Development does not involve:

- a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or
- b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

### Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

### Vegetation clearing, ecological value and connectivity

**PO71**

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;

b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

**PO72**

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;

b. providing contiguous patches of habitat;

c. provide replacement and rehabilitation planting to improve connectivity;

No example provided.
d. avoiding the creation of fragmented and isolated patches of habitat;

e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

### Vegetation clearing and habitat protection

**PO73**

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No example provided.

**PO74**

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

- a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
- b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
- c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

No example provided.

**PO75**

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

- a. providing contiguous patches of habitat;
- b. avoiding the creation of fragmented and isolated patches of habitat;
- c. providing wildlife movement infrastructure;
- d. providing replacement and rehabilitation planting to improve connectivity.

No example provided.

### Vegetation clearing and soil resource stability

**PO76**

Development does not:

- a. result in soil erosion or land degradation;
- b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

No example provided.
**Vegetation clearing and water quality**

**PO77**

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
b. avoiding or minimising changes to landforms to maintain hydrological water flows;
c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry and animal keeping activities.

No example provided.

**PO78**

Development minimises adverse impacts of stormwater run-off on water quality by:

a. minimising flow velocity to reduce erosion;
b. minimising hard surface areas;
c. maximising the use of permeable surfaces;
d. incorporating sediment retention devices;
e. minimising channelled flow.

No example provided.

**Vegetation clearing and access, edge effects and urban heat island effects**

**PO79**

Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

No example provided.

**PO80**

Development minimises potential adverse ‘edge effects’ on ecological values by:

a. providing dense planting buffers of native vegetation between a development and environmental areas;
b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;
d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
e. landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and...
light pollution, increased fire frequency and changes in the groundwater and surface water flow.

<table>
<thead>
<tr>
<th>PO81</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:</td>
</tr>
<tr>
<td>a. pervious surfaces;</td>
</tr>
<tr>
<td>b. providing deeply planted vegetation buffers and green linkage opportunities;</td>
</tr>
<tr>
<td>c. landscaping with local native plant species to achieve well-shaded urban places;</td>
</tr>
<tr>
<td>d. increasing the service extent of the urban forest canopy.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets</th>

</tr>
</tbody>
</table>

Editor's note - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

<table>
<thead>
<tr>
<th>Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.</td>
</tr>
</tbody>
</table>

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

<table>
<thead>
<tr>
<th>PO83</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development will:</td>
</tr>
<tr>
<td>a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;</td>
</tr>
<tr>
<td>b. protect the fabric and setting of the heritage site, object or building;</td>
</tr>
<tr>
<td>c. be consistent with the form, scale and style of the heritage site, object or building;</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>E83</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.</td>
</tr>
</tbody>
</table>

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The
d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
f. retain public access where this is currently provided.

PO84
Demolition and removal is only considered where:

a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
c. limited demolition is performed in the course of repairs, maintenance or restoration; or
d. demolition is performed following a catastrophic event which substantially destroys the building or object.

No example provided.

PO85
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No example provided.

PO86
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.

E86
Development does:

a. not result in the removal of a significant tree;
b. not occur within 20m of a protected tree;
c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

PO87
Development within a Pumping station buffer is located, designed and constructed to:

E87
Development does not involve the construction of any buildings or structures within a Pumping station buffer.
a. ensure that odour or other air pollutant impacts on the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008;

b. ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.

### Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

### PO88

**Development:**

- a. minimises the risk to persons from overland flow;
- b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.

No example provided.

### PO89

**Development:**

- a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;
- b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.

### PO90

**Development does not:**

- a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level;
- b. increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.

No example provided.
<table>

| Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.  
Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.  
Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow | Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:  
 a. Urban area – Level III;  
 b. Rural area – N/A;  
 c. Industrial area – Level V;  
 d. Commercial area – Level V.  
Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment. |  
| PO94 | No example provided. |
| Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:  
 a. a stormwater pipe if the nominal pipe diameter exceeds 300mm;  
 b. an overland flow path where it crosses more than one premises;  
 c. inter-allotment drainage infrastructure.  
Note - Refer to Planning scheme policy - Integrated design for details and examples. |
Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

### Additional criteria for development for a Park\(^{(57)}\)

**PO95**  
Development for a Park\(^{(57)}\) ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- a. public benefit and enjoyment is maximised;
- b. impacts on the asset life and integrity of park structures is minimised;
- c. maintenance and replacement costs are minimised.

**E95**  
Development for a Park\(^{(57)}\) ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

### Riparian and wetland setbacks

**PO96**  
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- a. impact on fauna habitats;
- b. impact on wildlife corridors and connectivity;
- c. impact on stream integrity;
- d. impact of opportunities for revegetation and rehabilitation planting;
- e. edge effects.

**E96**  
Development does not occur within:

- a. 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line
- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

### Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code.

Note - Excludes pools and class 10 buildings. For requirements for pools and class 10 buildings and structures refer to the QDC.

Note - * Does not apply to basement car parking areas.
6 Zones

6.2.6.2 Suburban neighbourhood precinct

6.2.6.2.1. Purpose - Suburban neighbourhood precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Suburban neighbourhood precinct:
   a. The suburban neighbourhood precinct consists of a primarily residential urban fabric providing predominantly low density, low rise, detached housing on a variety of lot sizes with a maximum site density of 15 dwellings per hectare or a maximum site density of 75 dwellings per hectare if complying with b. v. below.
   b. Residential activities consist of:
      i. Detached dwelling houses\(^{(22)}\), predominantly on traditional lots;
      ii. Detached dwelling houses\(^{(22)}\) on narrow lots and Dual Occupancies\(^{(21)}\) where they are dispersed within the streetscape or are located within easy walking distance to services (centre, public transport node, community facilities) or park;
      iii. Domestic outbuildings are subordinate in appearance and function to the dwelling;
      iv. Retirement facilities\(^{(67)}\), Residential care facilities\(^{(65)}\), and Relocatable home parks\(^{(62)}\) are located within easy walking distance of a centre;
      v. Multiple dwellings\(^{(49)}\), Rooming accommodation\(^{(69)}\), short-term accommodation\(^{(77)}\) and tourist park\(^{(84)}\) only establish where they will support a higher order or district centre or a train station by being adjacent (within 400m walking distance) to that higher order or district centre or train station.
      vi. The built form of concentrated residential uses and managed communities (e.g. townhouse developments, multiple dwellings\(^{(49)}\), retirement facilities\(^{(67)}\), residential care facilities\(^{(65)}\), relocatable home parks\(^{(62)}\)) are designed to integrate with the surrounding neighbourhood.
   c. The design, siting and construction of residential uses are to:
      i. contribute to an attractive streetscape with priority given to pedestrians;
      ii. encourage passive surveillance of public spaces;
      iii. result in privacy and residential amenity consistent with the low density residential character of the area;
      iv. provide a diverse and attractive built form;
      v. provide a low rise built form compatible with its surrounds;
      vi. incorporate sub-tropical urban design principles that respond to local climatic conditions;
      vii. incorporate sustainable practices including maximising energy efficiency and water conservation;
      viii. incorporate natural features and respond to site topography;
      ix. cater for appropriate car parking and manoeuvring areas on site;
      x. be of a scale and density consistent with the low density residential character of the area;
      xi. provide urban services such as reticulated water, sewerage, sealed roads, parks and other identified infrastructure.
d. **Home based business can only be established where the scale and intensity of the activity does not detrimentally impact upon the character and amenity associated with the surrounding area.** Specifically, Home based business does not include the sale or restoration of more than 4 vehicles in any calendar year or, undertake a mechanical repairs or panel beating activity associated with a business at the subject premises.

e. Non-residential uses in the suburban neighbourhood precinct take the form of community activities, corner stores, neighbourhood hubs or local centres.

f. Community activities:
   i. establish in a location that may be serviced by public transport;
   ii. do not negatively impact adjoining residents or the streetscape;
   iii. do not undermine the viability of existing or future centres.

g. Corner stores may establish as standalone uses (not part of a neighbourhood hub) where:
   i. the store is of a scale that remains subordinate to all centres and neighbourhood hubs within the region;
   ii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. The corner store should not be within 1600m of another corner store, neighbourhood hub or centre measured from the centre of the corner store, neighbourhood hub or centre;
   iii. they are appropriately designed and located to include active frontages.

h. Retail and commercial activities *(forming part of a neighbourhood hub) except Service stations*:
   i. cluster with other non-residential uses (excluding corner stores) forming a neighbourhood hub;
   ii. are centred around a ‘Main Street’ central core fostering opportunities for social and economic exchange;
   iii. are of a small scale, appropriate for a neighbourhood hub;

   Note - Retail and commercial uses that will result in a new or existing neighbourhood hub expanding to a scale and function consistent with a Local centre are to be assessed as if establishing a new Local centre. Refer to the Centre zone code for relevant assessment benchmarks.

   iv. do not negatively impact adjoining residents or the streetscape;
   v. are subordinate in function and scale to all centres within the region.

i. **Service stations:**
   i. establish where they will not disrupt, fragment or negatively impact active frontages (e.g. within a neighbourhood hub);
   ii. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;
   iii. establish in locations that will not have a negative impact on the street environments intended to include active frontages (e.g. Neighbourhood hubs or centres);
   iv. do not negatively impact adjoining residents or the streetscape;
v. ancillary uses or activities only service the convenience needs of users.

j. The design, siting and construction of non-residential uses:
   i. maintains a human scale, through appropriate building heights and form;
   ii. provides attractive, active frontages that maximise pedestrian activity along road frontages, movement corridors and public spaces (excluding Service stations);
   iii. provides for active and passive surveillance of road frontages, movement corridors and public spaces;
   iv. promotes active transport options and ensures an oversupply of car parking is not provided;
   v. locates car parking so as not to dominate the street;
   vi. does not result in large internalised shopping centres (e.g. large blank external walls with tenancies only accessible from within the building) surrounded by expansive areas of surface car parking.

k. Neighbourhood hub expansion (into adjoining lots) or the establishment of a new neighbourhood hub only occurs where:
   i. it is of a scale that remains subordinate to all centres within the region;
      Note - Retail and commercial uses that will result in a new or existing neighbourhood hub expanding to a scale and function more consistent with a Local centre are to be assessed as if establishing a new Local centre. Refer to the Centre zone code for relevant assessment criteria.
   ii. the expansion (into adjoining lots) will strengthen the existing neighbourhood hub as an important neighbourhood activity node;
   iii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. New neighbourhood hubs are to service a currently unserviced catchment. The centre of a neighbourhood hub should not be located within 1600m of another neighbourhood hub or centre measured from the centre of each hub or centre;
   iv. for a new neighbourhood hub, it is located on sub-arterial or collector road;
   v. they are appropriately designed and located to include active frontages around a 'main street' core and are staged where relevant to retain key (highly accessible) sites for long term development.

l. General works associated with the development achieves the following:
   i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
   ii. the development manages stormwater to:
      A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
      B. prevent stormwater contamination and the release of pollutants;
      C. maintain or improve the structure and condition of drainage lines and riparian areas;
      D. avoid off-site adverse impacts from stormwater.
   iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

m. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

n. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

o. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

p. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.

q. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;

B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;

C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:
A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;

B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;

C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;

D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

r. Development in the Suburban neighbourhood precinct includes 1 or more of the following:

- Child care centre (13)
- Club (14)
- Community care centre (15)
- Community residence (16)
- Community use (17)
- Dual occupancy (21)
- Dwelling house (22)
- Dwelling unit (23)
- Educational establishment (24)
- Emergency services (25)
- Health care services (33)
- Home based business (35)
- Multiple dwelling - if within 400m walking distance of a higher order or district centre or a train station
- Place of worship (60)
- Relocatable home park (62) - if within 800m walking distance of a higher order or district centre
- Residential care facility (65) - if within 800m walking distance of a higher order or district centre
- Retirement facility (67) - if within 800m walking distance of a higher order or district centre
- Sales office (72)
- Shop (75) - if for a corner store
- Where in a Neighbourhood hub:
  - Food and drink outlet (28)
  - Hardware and trade supplies (32)
  - Health care services (33)
  - Indoor sport and recreation - for a gymnasium
  - Office (53)
  - Service industry (73)
  - Shop (75)
  - Shopping centre
  - Veterinary services (87)

Note - Refer to Overlay map - Centre walking distances

s. Development in the Suburban neighbourhood precinct does not include any of the following:

- Adult store (1)
- Agricultural supplies store (2)
- Air services (3)
- Hotel (37)
- Intensive animal industry (39)
- Intensive horticulture (40)
- Renewable energy facility (63)
- Research and technology industry (64)
6.2.6.2.2 Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part C, Table 6.2.6.2.1. Where the development does not meet a requirement for accepted development (RAD) within Part C Table 6.2.6.2.1, the category of development changes to assessable development under the rules outlined in section 5.3.3. (1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

<table>
<thead>
<tr>
<th>Requirements for accepted development (RAD)</th>
<th>Corresponding PO</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD1</td>
<td>PO2</td>
</tr>
</tbody>
</table>

t. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

### Part C—Requirements for accepted development - Suburban neighbourhood precinct

**Table 6.2.6.2.1 Requirements for accepted development - Suburban neighbourhood precinct**

#### General requirements

**Building height (Residential uses)**

<table>
<thead>
<tr>
<th>RAD1</th>
<th>Building height does not exceed:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Number</td>
<td>Description</td>
</tr>
<tr>
<td>--------</td>
<td>-------------</td>
</tr>
<tr>
<td>a.</td>
<td>that mapped on Overlay map – Building heights; or</td>
</tr>
<tr>
<td>b.</td>
<td>for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.</td>
</tr>
<tr>
<td><strong>Building height (Non-residential uses)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>RAD2</strong></td>
<td>Building height does not exceed the maximum height identified on Overlay map - Building heights.</td>
</tr>
<tr>
<td><strong>Setbacks (Residential uses)</strong></td>
<td></td>
</tr>
</tbody>
</table>
| **RAD3** | Setbacks (excluding built to boundary walls) comply with Table 6.2.6.2.3 'Setbacks'- Setbacks (Residential uses).  
  Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details). |
| **RAD4** | Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:  
  a. **only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.6.2.4**;  
  b. of a length and height **not exceeding that specified** stated in Table 6.2.6.2.4 'Built to boundary walls (Residential uses)';  
  c. setback from the side boundary:  
  0. **not more than 20mm**; or  
    i. if a plan of development shows provides for only one built to boundary wall on the one boundary, not more than **150-200mm**; or  
    ii. if a built to boundary wall may be built on each side of the same boundary, **not more than 20mm**  
  d. on the low side of a sloping lot.  
  Editor's note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to boundary walls on adjacent lots a 'High Density Development Easement' is recommended; or for all other built to boundary walls a 'easement for maintenance purposes' is recommended. |
| **Site cover (Residential uses)** | |
| **RAD5** | Site cover does not exceed 50% (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures). |
| **Lighting** | |
| **RAD6** | Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters of the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.  
  Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day. |
### Clearing of habitat trees where not located in the Environmental areas overlay map

<table>
<thead>
<tr>
<th>RAD7</th>
<th>Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. Clearing of a habitat tree located within an approved development footprint;</td>
</tr>
<tr>
<td></td>
<td>b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;</td>
</tr>
<tr>
<td></td>
<td>c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;</td>
</tr>
<tr>
<td></td>
<td>d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;</td>
</tr>
<tr>
<td></td>
<td>e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;</td>
</tr>
<tr>
<td></td>
<td>f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;</td>
</tr>
<tr>
<td></td>
<td>g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;</td>
</tr>
<tr>
<td></td>
<td>h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.</td>
</tr>
</tbody>
</table>

**Editor's note -** A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

### Works requirements

<table>
<thead>
<tr>
<th>Utilities</th>
<th>Where available, the development is connected to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD8</td>
<td>a. an existing reticulated electricity supply;</td>
</tr>
<tr>
<td></td>
<td>b. telecommunications and broadband;</td>
</tr>
<tr>
<td></td>
<td>c. reticulated sewerage;</td>
</tr>
<tr>
<td></td>
<td>d. reticulated water;</td>
</tr>
<tr>
<td></td>
<td>e. sealed and dedicated road.</td>
</tr>
</tbody>
</table>

Development is provided with an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).
Where involving an extension (building work) in front of the main building line and where the lot adjoins or is opposite to a park™, foreshore or Humpybong Reserve, all existing overhead power lines are to be undergrounded for the full frontage of the lot.

### Access

**RAD**

The frontage road is fully constructed to Council’s standards.

Note - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - Frontage roads include streets where no direct lot access is provided.

**RAD10**

Any new or changes to existing direct vehicle access for residential development does not occur from arterial or sub-arterial roads.

**RAD11**

Any new or changes to existing site access crossovers and driveways are designed, and located and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. where for a Council-controlled road, and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

**RAD12**

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities Part 1: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

**RAD**

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

### Stormwater
Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

- is for urban purposes only;
- involves a land area greater than 2500m²;
- will result in 6 or more dwellings;
  - OR
  - will result in an impervious area greater than 25% of the net developable area.

Where development:

- is for an urban purpose that involves a land area 2500m² or greater in size; and
- that results in 6 or more dwellings; or
- that result in an impervious area greater than 25% of the net developable area;

incorporates a ‘deemed to comply solution’ to manage stormwater quality.

Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design ‘Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland’ and Planning scheme policy – Integrated design.

Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>------</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with Sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits.</td>
</tr>
</tbody>
</table>

**Note** - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

**Note** - Refer to Planning scheme policy - Integrated design (Appendix C) for easement requirements over open channels.

## Site works and construction management

| RAD15 | The site and any existing structures are to be maintained in a tidy and safe condition. |
| RAD16 | Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy – Stormwater management and Planning scheme policy – Integrated design. Development does not cause erosion or allow sediment to leave the site. Note - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation. |
| RAD | No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works. |
| RAD | Existing street trees are protected and not damaged during works. Note - Where development occurs in the tree protection zone, measures and techniques as described in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented. |
| RAD19 | Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification. |
| RAD17 | Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. |
| RAD20 | Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times. |
| RAD18 | All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works. |
### Disposal of Materials

Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

**Note -** No burning of cleared vegetation is permitted.

**Note -** The chipped vegetation must be stored in an approved location.

### All Development Works

All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.

### Earthworks

The total of all cut and fill on-site does not exceed 900mm in height:

**Figure - Cut and Fill**

Note - This is site earthworks not building work.

Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;
Cut and fill batters, (other than batters to dams and water impoundments), have a finished slope no steeper than the following:

- any cut batter is no steeper than 1V in 4H;
- any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;
- any compacted fill batter is no steeper than 1V in 4H.

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

Note - Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.

All fill and excavation is contained on-site and is free draining.

Earthworks undertaken on the development site are shaped in a manner which does not:

- prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
- redirect stormwater surface flow away from existing flow paths; or
- divert stormwater surface flow onto adjacent land (other than a road) in a manner which:
  - concentrates the flow; or
  - increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
  - causes actionable nuisance to any person, property or premises.

All fill placed on-site is:
a. **limited to that necessary for the approved use**;

b. **clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.**

### RAD21

The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

*Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures*

### RAD

No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

*Note - Public sector entity is defined in Schedule 2 of the Act.*

### RAD23

Filling or excavation that would result in any of the following is not carried out on site: does not result in:

a. reduction in cover over any Council or public sector entity infrastructure to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

*Note - Public sector entity is defined in Schedule 2 of the Act.*

### Fire services

*Note - The provisions under this heading only apply if:*

a. the development is for, or incorporates:
   
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   
   iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or
   
   iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
   
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

*Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.*
RAD24 External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

- in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
- in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
  - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
  - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
  - for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities; and
- in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.

RAD25 A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- an unobstructed width of no less than 3.5m;
- an unobstructed height of no less than 4.8m;
- constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

RAD26 On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

RAD27 For development that contains on-site fire hydrants external to buildings:

- those external hydrants can be seen from the vehicular entry point to the site; or
- a sign identifying the following is provided at the vehicular entry point to the site:
  - the overall layout of the development (to scale);
  - internal road names (where used);
  - all communal facilities (where provided);
  - the reception area and on-site manager’s office (where provided);
  - external hydrants and hydrant booster points;
  - physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- in a form;
b. of a size;
c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

RAD28 For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

### Use specific requirements

**Home based business**

RAD29 Home based business(s) are fully enclosed within the existing dwelling or on-site structure.

RAD30 A maximum of 1 employee (not a resident) OR 2 customers OR customers from within 1 Small rigid vehicle (SRV) or smaller are permitted on the site at any one time.

RAD31 Service and delivery vehicles do not exceed one Small rigid vehicle (SRV) at any one time.

RAD32 Vehicle parking for the Home based business on-site is limited to 1 car or Small rigid vehicle (SRV).

RAD33 Home based business(s) occupy an area of the existing dwelling or on-site structure not greater than 40m$^2$ gross floor area.

RAD34 Home based business(s) do not involve manufacturing.

Note - manufacturing as defined in the *Food Act 2006* is permitted. Food businesses that are licensable by local government and only involve the manufacturing of non-potentially hazardous food are permitted. Definitions in the *Food Act 2006* apply to this note.

RAD35 The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

RAD36 The hours of operation do not exceed 8:00am to 6:00pm, Monday to Saturday and are not open to the public on Sunday's, Christmas Day, Good Friday and Anzac Day.

Note - Office or administrative activities that do not generate non-residents visiting the site, such as book-keeping and computer work, may operate outside the hours of operation.

RAD37 For a bed and breakfast, the use:

a. is fully contained within the existing dwelling on-site;

b. occupies a maximum of 2 bedrooms;

c. includes the provision of a minimum of 1 meal per day;

d. accommodates a maximum of 6 people at any one time.
### Sales office (72)

| RAD38 | Car parking spaces are provided in accordance with Schedule 7 - Car parking. |
| RAD39 | Car parking and manoeuvring areas are designed and constructed in accordance with the Australian Standards AS2890.1. |
| RAD40 | Sales office (72) has direct vehicular access to a dedicated road constructed in accordance with Planning scheme policy - Integrated design. |
| RAD41 | Fencing adjoining a street (other than a laneway) or public open space does not exceed 1.2 metres in height. |
| RAD42 | The sales office (72) is used for the sale of land or buildings on the same site as the sales office (72) or an adjoining site. |
| RAD43 | The sales office (72) has a clearly identifiable pedestrian entry that is visible and accessible from the primary frontage. |
| RAD44 | The use of the premises for a sales office (72) is for a maximum of 2 years after the commencement of the use. |

### Telecommunications facility (81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

| RAD45 | A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility. |
| RAD46 | The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval. |
| RAD47 | Equipment shelters and associated structures are located: |
|        | a. directly beside the existing equipment shelter and associated structures; |
|        | b. behind the main building line; |
|        | c. further away from the frontage than the existing equipment shelter and associated structures; |
|        | d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. |
| RAD48 | Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality. |
| RAD49 | The facility is enclosed by security fencing or by other means to ensure public access is prohibited. |
| RAD50 | A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses. |

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.
### RAD51
All equipment comprising the telecommunications facility\(^{(81)}\) which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

### Retail, commercial and community uses

#### RAD52
Where involving an extension (building work) in the front setback a minimum of 50% of the front facade of the building is made up of windows or glazing between a height of 1m and 2m. The minimum window/glazing is to remain uncovered and free of signage. Any tinting, signage or vinyl wrap applied to a glazed facade located at ground floor level is to maintain visibility of the internal activity from the street and not obscure surveillance of the street.

*Figure - Glazing*

| RAD53 | Development does not result in a reduction in the number or standard of car parking spaces provided on the site except where a reduction is required for the provision of cycle parking. |
| RAD54 | Where additional car parking spaces are provided they are not located between the frontage and the main building line. |
| RAD55 | Where involving an extension (building work), bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste. |
| RAD56 | Where involving an extension (building work) it does not result in a reduction in the amount or standard of established landscaping on-site. |
| RAD57 | Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of *Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting*. Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day. |
| RAD58 | Hours of operation do not exceed 6:00am to 9:00pm Monday to Sunday. |

**RAD**

- Development does not involve a drive through facility.

### Values and constraints requirements

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.
Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

**RAD59**

Development does not involve:

a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or

b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD.

![Graph showing thresholds for excavation and filling](image)

Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.
Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

<table>
<thead>
<tr>
<th>RAD60</th>
<th>Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house or extension to an existing dwelling house only on lots less than 750m².</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Editor's note - See in heading above for other uses excluded from native vegetation clearing requirements.</td>
</tr>
<tr>
<td></td>
<td>Editor's note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:</td>
</tr>
<tr>
<td></td>
<td>i. co-locating all associated activities, infrastructure and access strips;</td>
</tr>
<tr>
<td></td>
<td>ii. be the least valued area of koala habitat on the site;</td>
</tr>
<tr>
<td></td>
<td>iii. minimise the footprint of the development envelope area;</td>
</tr>
<tr>
<td></td>
<td>iv. minimise edge effects to areas external to the development envelope;</td>
</tr>
<tr>
<td></td>
<td>v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;</td>
</tr>
<tr>
<td></td>
<td>vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.</td>
</tr>
<tr>
<td></td>
<td>Editor's note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.</td>

| RAD67 | A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design. |

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)
Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

**RAD68**

Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

**RAD69**

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

**RAD70**

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

**RAD71**

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;
b. laying of overhead or underground services;
c. any sealing, paving, soil compaction;
d. any alteration of more than 75mm to the ground surface level prior to work commencing.

**RAD72**

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

**Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following requirements apply)**

**RAD73**

Development does not include the following uses within a Wastewater treatment site buffer:

a. Caretaker’s accommodation\(^{(10)}\);
b. Community residence\(^{(16)}\);
c. Dual occupancy\(^{(21)}\);
d. Dwelling house\(^{(22)}\);
e. Dwelling unit\(^{(23)}\);
f. Hospital\(^{(36)}\);
g. Rooming accommodation\(^{(69)}\);
h. Multiple dwelling\(^{(49)}\);
i. Non-resident workforce accommodation\(^{(52)}\);
j. Relocatable home park\(^{(62)}\);
k. Residential care facility\(^{(65)}\);
l. Resort complex\(^{(66)}\);
m. Retirement facility\(^{(67)}\);
n. Rural workers’ accommodation\(^{(71)}\);
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | o. Short-term accommodation<sup>(77)</sup>;
  | p. Tourist park<sup>(84)</sup>.
|   | RAD74 Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.
|   | RAD75 Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.
|   | RAD76 Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):
|   | a. buildings or structures;
|   | b. gates and fences;
|   | c. storage of equipment or materials;
|   | d. landscaping or earthworks or stormwater or other infrastructure.
|   | RAD77 On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected.
|   | RAD78 On-site sewerage facilities in a Water supply buffer for a dwelling house<sup>(22)</sup> include:
|   | a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time;
|   | b. a reserve land application area of 100% of the effluent irrigation design area;
|   | c. land application areas that are vegetated;
|   | d. the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area);
|   | e. wastewater collection and storage systems must have capacity to accommodate full load at peak times.
|   | RAD79 On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging.
|   | RAD80 Development involving Permanent plantation<sup>(59)</sup> within a Water supply buffer maintains a minimum of 30% ground cover at all times.
|   | RAD81 Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer.
|   | RAD82 Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.
|   | RAD83 Development does not include the following uses located within a landfill site buffer:
|   | a. caretaker’s accommodation<sup>(10)</sup>;
|   | b. community residence<sup>(16)</sup>;
|   | c. dual occupancy<sup>(21)</sup>;
|   | d. dwelling house<sup>(22)</sup>;
|   | e. dwelling unit<sup>(23)</sup>;
|   | f. hospital<sup>(36)</sup>;
|   | g. rooming accommodation<sup>(69)</sup>.
|   | h. multiple dwelling<sup>(49)</sup>;
|   | i. non-resident workforce accommodation<sup>(52)</sup>;
|   | j. relocatable home park<sup>(62)</sup>.
k. residential care facility\(^{(65)}\);

l. resort complex\(^{(66)}\);

m. retirement facility\(^{(67)}\);

n. rural workers' accommodation\(^{(71)}\);

o. short term accommodation\(^{(77)}\);

p. tourist park\(^{(84)}\).

RAD84 All habitable rooms located within an Electricity supply substation buffer are:

a. located a minimum of 10m from an electricity supply substation\(^{(80)}\); and

b. acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.

RAD85 Development does not involve the construction of any buildings or structures containing habitable rooms or sensitive land uses within a High voltage electricity line buffer.

Overland flow path (refer Overlay map - Overland flow path to determine if the following requirements apply)

RAD86 Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.

RAD87 Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

RAD88 Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.

RAD89 Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.

RAD90 Development for a material change of use or building work for a Park\(^{(57)}\) ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following requirements apply)

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

RAD91 No development is to occur within:

a. 50m from top of bank for W1 waterway and drainage line

b. 30m from top of bank for W2 waterway and drainage line

c. 20m from top of bank for W3 waterway and drainage line

d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.
Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

**Scenic amenity - Regionally significant (Hills) and Locally important (Coast) - (refer Overlay map - Scenic amenity to determine if the following requirements apply)**

**RAD92** Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not:

a. located on a hill top or ridge line; and

b. all parts of the building and structure are located below the hill top or ridge line.

**RAD93** Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

a. go across land contours and do not cut straight up slopes;

b. follow natural contours, not resulting in batters or retaining walls being greater than 1m in height.
Where located in the Regionally significant (Hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:

<table>
<thead>
<tr>
<th>Colour</th>
<th>Colour</th>
<th>Colour</th>
</tr>
</thead>
<tbody>
<tr>
<td>N12 – Holly</td>

<tr>
<td>N43 – Pipeline Grey</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Where located in the Locally important (Coast) scenic amenity overlay; landscaping comprises indigenous coastal species;
b. fences and walls facing the coast are no higher than 1m. Where fences and walls are higher than 1m, they have 50% transparency. This does not apply to a fence or wall at an angle of 90° to the coast;

c. where over 12m in height, the building design includes the following architectural character elements:

i. curving balcony edges and walls, strong vertical blades and wall planes;

ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;

iii. rooftop outlooks, tensile structure as shading devices; and

iv. lightweight structures use white frame elements in steel and timber, bold colour contrast.

d. existing pine trees, palm trees, mature fig and cotton trees are retained.

Note - A list of appropriate indigenous coastal species is identified in Planning scheme policy - Integrated design.
Part D—Criteria for assessable development - Suburban neighbourhood precinct

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria are set out in Part D, Table 6.2.6.2.2 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessable, the assessment benchmarks become the whole of the planning scheme.

Table 6.2.6.2.2 Assessable development - Suburban neighbourhood precinct

<table>
<thead>
<tr>

<th>E2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buildings and structures have a height that:</td>
<td>Building height does not exceed:</td>
</tr>
<tr>
<td>a. is consistent with the low rise character of the Suburban neighbourhood precinct;</td>
<td>a. that mapped on Overlay map – Building heights; or</td>
</tr>
<tr>
<td>b. responds to the topographic features of the site, including slope and orientation;</td>
<td>b. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.</td>
</tr>
<tr>
<td>c. is not visually dominant or overbearing with respect to the streetscape, street conditions (e.g. street width) or adjoining properties;</td>
<td></td>
</tr>
<tr>
<td>d. positively contributes to the existing built form of the surrounding area;</td>
<td></td>
</tr>
</tbody>
</table>
Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height, setbacks, site cover, building bulk and mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution.

e. responds to the height of development on adjoining land where contained within another precinct or zone.

Note - Refer to Planning scheme policy - Residential design for details and examples.

<table>
<thead>

<tr>
<td><strong>E3</strong></td>
<td><strong>E4.1</strong></td>
</tr>
<tr>
<td>Building height does not exceed the maximum height identified on Overlay map - Building heights except for architectural features associated with religious expression on Place of worship(^{66}) and Educational establishment(^{24}) buildings.</td>
<td></td>
</tr>
</tbody>
</table>

| **E4.2**                               |
| Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are: |
| **a.** only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.6.2.4; |
| **b.** of a length and height not exceeding that specified in Table 6.2.6.2.4 'Built to boundary walls (Residential uses)'; |
| **c.** setback from the side boundary: |
| 0. not more than 20mm; or |
g. provide adequate separation to particular infrastructure and waterbodies to minimise adverse impacts on people, property, water quality and infrastructure;

h. built to boundary walls do not create unusable or inaccessible spaces and do not negatively impact the streetscape character, amenity or functionality of adjoining properties.

Note - Refer to Planning scheme policy - Residential design for details and examples.

Setbacks (Non-residential uses)

PO5
Front setbacks ensure non-residential buildings address and actively interface with streets and public spaces.

E5.1
For the primary street frontage buildings are constructed:

a. to the property boundary; or

b. setback a maximum of 3m from the property boundary, where for the purpose of outdoor dining.

E5.2
For the secondary street frontage, setbacks are consistent with adjoining buildings.

PO6
Side and rear setbacks cater for driveway(s), services, utilities and buffers requires to protect the amenity of adjoining sensitive land uses and the development will not be visually dominant or overbearing with respect to adjoining properties.

No example provided.

Site cover (Residential uses)

PO7
Residential buildings and structures will ensure that site cover:

a. does not result in a site density that is inconsistent with the character of the area;

b. does not result in an over development of the site;

c. does not result in other elements of the site being compromised (e.g. Setbacks, open space etc);

d. reflects the low density character of the area.

E7
Site cover does not exceed 50% (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures).
### Movement network

**PO**

Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

**E**

Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above example.

### Built form

**PO8**

The development has a built form consistent with a low rise detached dwelling house\(^{22}\) that addresses the street.

No example provided.

Note - Refer to Planning scheme policy - Residential design for details and examples.

### Water sensitive urban design

**PO9**

Best practice Water Sensitive Urban Design (WSUD) is incorporated within development sites adjoining street frontages to mitigate impacts of stormwater run-off in accordance with Planning scheme policy - Integrated design.

No example provided.

### Sensitive land use separation

**PO10**

Sensitive land uses within 250m of land in the Industry zone - General industry precinct must mitigate any potential exposure to industrial air, noise or odour emissions that impact on human health, amenity and wellbeing.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy – Noise.

**E10**

Development is designed and operated to ensure that:

a. it meets the criteria outlined in the Planning Scheme Policy – Noise;

b. the air quality objectives in the Environmental Protection (Air) Policy 2008, are met.

**PO11**

Vulnerable land uses within 1,500m of any existing Tier 1, 2 or 3 MHF is compatible with MHF risks.

No example provided.
### Amenity

**PO12**

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.  

No example provided.

### Noise

**PO13**

Noise generating uses do not adversely affect existing or potential noise sensitive uses.

No example provided.

**PO14**

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

### E14.1

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

### E14.2

Noise attenuation structures (e.g. walls, barriers or fences):

- are not visible from an adjoining road or public area unless:
  1. adjoining a motorway or rail line; or
  2. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- do not remove existing or prevent future active transport routes or connections to the street network;
- are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.
### Clearing of habitat trees where not located within the Environmental areas overlay map

**PO15**

<table>
<thead>
<tr>
<th>a.</th>
<th>Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.</th>
</tr>
</thead>
<tbody>
<tr>
<td>b.</td>
<td>Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees &gt; 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.</td>
</tr>
<tr>
<td>c.</td>
<td>Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner</td>
</tr>
</tbody>
</table>

*Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas*

### Works criteria

#### Utilities

<table>
<thead>
<tr>
<th>PO</th>
<th>All services including water supply, sewage disposal, electricity, street lighting, telecommunications and gas (if available) are provided in accordance with Planning scheme policy - Integrated design (Appendix A).</th>
</tr>
</thead>
<tbody>
<tr>
<td>PO16</td>
<td>Where the site adjoins or is opposite to a Park(1), foreshore or Humpybong Reserve all existing overhead power lines are to be undergrounded for the full frontage of the site:</td>
</tr>
<tr>
<td>PO17</td>
<td>The development is connected to an existing reticulated electricity supply system approved by the relevant energy regulating authority.</td>
</tr>
<tr>
<td>PO18</td>
<td></td>
</tr>
</tbody>
</table>

*Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas*
| PO49 | Where available the development is to safely connect to reticulated gas. | No example provided. |
| PO20 | The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to public health. | E20.1 Where in a sewered area, the development is connected to a reticulated sewerage network. E20.2 Trade waste is pre-treated on site prior to discharging into the sewerage network. |
| PO21 | The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water. | E21 Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards. |
| PO22 | The development is provided with constructed and dedicated road access. | No example provided. |

### Access

| PO23 | Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design. | No example provided. |
| PO24 | The layout of the development does not compromise: a. the development of the road network in the area; b. the function or safety of the road network; c. the capacity of the road network. | E24.1 Direct vehicle access for residential development does not occur from arterial or sub-arterial roads or a motorway. Editor’s note - Residential developments should consider amalgamation with the lot to the rear and gaining access via a laneway. |
Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

### E24.2
The development provides for the extension of the road network in the area in accordance with Council’s road network planning.

### E24.3
The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council’s road planning.

### E24.4
The development layout allows forward vehicular access to and from the site.

### PO25
Safe access is provided for all vehicles required to access the site.

### E25.1
Site access and driveways are designed and located and constructed in accordance with:

- **a.** Where for a Council-controlled road and associated with a Dwelling house:
  - i. Planning scheme policy - Integrated design;

- **b.** Where for a Council-controlled road, and not associated with a Dwelling house:
  - i. AS/NZS2890.1 section 3: Parking facilities Part 1: Off street car parking;
  - ii. AS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
  - iii. Planning scheme policy - Integrated design;
  - iv. Schedule 8 - Service vehicle requirements;

- **c.** Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

### E25.2
Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:
a. AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking;
b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and
c. the relevant standards in Planning scheme policy - Integrated design; and
d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

E25.3
Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

E
Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO
Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road;

Editor's Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads;

E
Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed;

Note - The road network is mapped on Overlay Map - Road Hierarchy.

PO
Roads which provide access to the site from an arterial or sub-arterial road remain trafficable during major storm events without flooding or impacting upon residential properties or other premises.

E
Access roads to the development have sufficient longitudinal and cross drainage to remain safely trafficable during major storm (1% AEP) events;

Note - The road network is mapped on Overlay map - Road hierarchy;

Note - Refer to QUDM for requirements regarding trafficability;

E
Culverts and causeways do not increase inundation levels or increase velocities, for all events up to the defined flood event, to upstream or downstream properties;
### Street design and layout

**PO**

Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:

- **a.** access to premises by providing convenient vehicular movement for residents between their homes and the major road network;
- **b.** safe and convenient pedestrian and cycle movement;
- **c.** adequate on street parking;
- **d.** stormwater drainage paths and treatment facilities;
- **e.** efficient public transport routes;
- **f.** utility services location;
- **g.** emergency access and waste collection;
- **h.** setting and approach (streetscape, landscaping and street furniture) for adjoining residences;
- **i.** expected traffic speeds and volumes; and
- **j.** wildlife movement.

Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.

---

**PO26**

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- **a.** ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- **b.** ensure the orderly and efficient continuation of the active transport network;
- **c.** ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

---

**E**

No example provided.

New intersections onto existing roads are designed to accommodate traffic volumes and traffic movements taken from a date 10 years from the date of completion of the last stage of the development. Detailed design is to be in accordance with Planning scheme policy - Integrated design.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.
Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or-

ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m² Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m² GFA;
- Warehouses and Industry greater than 6000m² GFA;
- On-site carpark greater than 100 spaces;

Note - Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.

E

Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy - Operational works inspection; maintenance and bonding procedures.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.

E

The active transport network is extended in accordance with Planning scheme policy - Integrated design.
Development has a trip generation rate of 100 vehicles or more within the peak hour;

Development which dissect or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

PO

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

E

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

E

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. Where the through road provides an access or residential street function:

i. intersecting road located on same side = 60 metres; or

ii. intersecting road located on opposite side = 40 metres.

b. Where the through road provides a local collector or district collector function:

i. intersecting road located on same side = 100 metres; or

ii. intersecting road located on opposite side = 60 metres.

c. Where the through road provides a sub-arterial function:
### Intersections

- **Category A:**
  1. Intersecting road located on the same side = 250 metres; or
  2. Intersecting road located on the opposite side = 100 metres.

- **Category B:**
  Where the through road provides an arterial function:
  1. Intersecting road located on the same side = 350 metres; or
  2. Intersecting road located on the opposite side = 150 metres.

### Walkable Block Perimeter

- 1. 600 metres in the Coastal communities precinct and Suburban neighbourhood precinct;
- 2. 500 metres in the Next generation neighbourhood precinct;
- 3. 400 metres in the Urban neighbourhood precinct.

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (i.e., left in/left out only) at intersections with sub-arterial roads or arterial roads.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO.

### PO Design and Construct

**All Council controlled frontage roads** are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum Construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only; OR</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width</td>
</tr>
</tbody>
</table>

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

E

Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

### Verge Construction

- Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width.

Note - The road network is mapped on Overlay map - Road hierarchy.
Note - Roads are considered to be constructed in accordance with Council's standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**Frontage road sealed but not constructed**

- Contains near side parking lane (if required), cycle lane (if required), 2 travel lanes plus 1.5m wide (full depth pavement) gravel shoulder and table drainage to the opposite side.

OR

**Frontage road partially constructed**

- The minimum total travel lane width is:
  - 6m for minor roads;
  - 7m for major roads;

Note - Major roads are sub-arterial roads and arterial roads. Minor roads are roads that are not major roads.

Note - Construction includes all associated works (services, street lighting and linemarking).

Note - Alignment within road reserves is to be agreed with Council.

Note - "Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

---

**Stormwater**

**PO**

Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient.

---

**E**

The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design.

---

**E**

Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM.

---

**E**

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM.
<table>
<thead>
<tr>
<th>PO</th>
<th>Note - Development provides roof and allotment (inter-allotment = QUDM level III) drainage, including bunds, to all lots that have a gradient less than 1 in 100 (for the whole of the allotment) to the road. The inter-allotment drainage system (including easements) is provided in accordance with Planning scheme policy - Integrated design (Appendix C).</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment.</td>
</tr>
<tr>
<td>E</td>
<td>The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site.</td>
</tr>
<tr>
<td>E</td>
<td>The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots.</td>
</tr>
<tr>
<td>E</td>
<td>The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel.</td>
</tr>
<tr>
<td>PO</td>
<td>Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas.</td>

<tr>
<td>Note - Refer to QUDM for recommended average flow velocities.</td>
<td></td>
</tr>
</tbody>
</table>
Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

**PO28**

Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.

<table>
<thead>
<tr>

<th>Stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be design in accordance with Planning scheme policy - Integrated Design (Appendix C).</td>
</tr>
</tbody>
</table>
Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;

b. overland flow paths where they cross more than one property boundary.

Note — Refer to Planning scheme policy — Integrated design for details.

Note — Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

Stormwater drainage pipes and structures through or within private land (including inter-allotment drainage) are protected by easements in favour of Council with sufficient area for practical access for maintenance purposes.

Note — In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council’s stormwater drainage system.

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>

</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225m diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</td>
</tr>
</tbody>
</table>

Note — Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note — Refer to Planning Scheme Policy - Integrated Design (Appendix C) for easement requirements over open channels.

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

Council is provided with accurate representations of the completed stormwater management works within residential developments.

"As Built" drawings and specifications of the stormwater management devices certified by an RPEQ is provided.

Note - Documentation is to include:

a. photographic evidence and inspection date of the installation of approved underdrainage;

b. copy of the bioretention filter media delivery doockets/quality certificates confirming the materials comply with specifications in the approved Stormwater Management Plan;

c. date of the final inspection.
**PO31**
The site and any existing structures are maintained in a tidy and safe condition.

**PO32**
All works on-site are managed to:

- a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- b. minimise as far as possible, impacts on the natural environment;
- c. ensure stormwater discharge is managed in a manner that does not cause actionable nuisance or annoyance to any person or premises;
- d. avoid adverse impacts on street trees and their critical root zone.

**E32.1**
Works incorporate temporary stormwater runoff, erosion and sediment controls and trash removal devices designed in accordance with the Urban Stormwater Quality Planning Guidelines, State Planning Policy, Schedule 10 - Stormwater management design objectives, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
- b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion of any kind;
- c. stormwater discharge rates do not exceed pre-existing conditions;
- d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and
- e. the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins;
- f. minimum design storm for all temporary diversion drains and sedimentation basins in accordance with Schedule 10 - Stormwater management design objectives;
- g. ponding or concentration of stormwater does not occur in adjoining properties.

**E32.2**
Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

**E32.3**
The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

**E32.4**

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

*Existing street trees are protected and not damaged during works.*

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.

**PO33**

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

**E33**

No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

**PO34**

All development works *on-site and including* the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

*Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.*

*Note - A Traffic Management Plan may be required to demonstrate compliance with this PO. A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).*

*Note - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less, and:*

- *the aggregate volume of imported or exported material is greater than 1000m³;* or
- *the aggregate volume of imported or exported material is greater than 200m³ per day;* or
- *the proposed haulage route involves a vulnerable land use or shopping centre.*

**E34.1**

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**E34.2**

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

*Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).*

**E34.3**

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

E
Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

Access to the development site is obtained via an existing lawful access point.

PO35
All disturbed areas are to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

E35
At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. grased stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

PO
Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

E
Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.

Editor's note - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Note - A dilapidation report may be required to demonstrate compliance with this E.

Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.
**PO36**

The clearing of vegetation on-site:

a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and

b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;

c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

**E36.1**

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

**E36.2**

Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

**PO37**

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, etc.

**E**

All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

No example provided.
the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

| Retaining walls and structures |  |
| PO43 | E43 |
| All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents. | Earth retaining structures:- |
| a. are not constructed of boulder rocks or timber; |  |
b. where height is no greater than 900mm, are provided in accordance with Figure—Retaining on a boundary:

**Figure—Retaining on boundary**

![Figure—Retaining on boundary](image)

b. where height is no greater than 900mm, are provided in accordance with Figure—Retaining on a boundary:

**Figure—Retaining on boundary**

![Figure—Retaining on boundary](image)

c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;

d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal; terraced, landscaped and drained as shown below.

**Figure—Cut**

![Figure—Cut](image)

**Figure—Fill**

![Figure—Fill](image)
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

b. result in a batter greater than 1V to 6H;

c. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

d. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

e. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

Retaining walls are designed and certified by a RPEQ so that:

- the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;
- earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;
- where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
  - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
  - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
  - material change of use for a Tourist park with accommodation in the form of caravans or tents; or
  - material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.

AND
b. none of the following exceptions apply:
   
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO44

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E44.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 3.2.2.1, with the exception that for Tourist parks (54) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:

i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;

ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;

iii. for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E44.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

E44.3
On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment*.

</tbody>
</table>
## Dual occupancies\(^{(21)}\)

**PO47**

Dual Occupancies\(^{(21)}\) are infrequent and dispersed within the streetscape and are not located within 200m (measured along the street alignment) of a lot containing an existing, approved or a properly made application for a Dual Occupancy\(^{(21)}\).

Note - Refer to Planning scheme policy - Residential design for dispersal method and calculation.

**E47**

Are located on lots with an area of 1000m\(^2\) or greater.

## Home based business\(^{(35)}\)

**PO48**

The scale and intensity of the Home Based Business\(^{(35)}\):

a. is compatible with the physical characteristics of the site and the character of the local area;

b. is able to accommodate anticipated car parking demand without negatively impacting the streetscape or road safety;

c. does not adversely impact on the amenity of adjoining and nearby premises;

d. remains ancillary to the residential use of the dwelling;

e. does not create conditions which cause hazards or nuisances to neighbours or other persons not associated with the activity;

f. ensures employees and visitors to the site do not negatively impact the expected amenity of adjoining properties;

g. ensures service and delivery vehicles do not negatively impact the amenity of the area.

## Major electricity infrastructure\(^{(43)}\), Substation\(^{(80)}\) and Utility installation\(^{(86)}\)

**PO49**

The development does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;

b. visually integrated with the surrounding area;

c. not visually dominant or intrusive;

d. located behind the main building line;

e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;

**E49.1**

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

a. are enclosed within buildings or structures;

b. are located behind the main building line;

c. have a similar height, bulk and scale to the surrounding fabric;

d. have horizontal and vertical articulation applied to all exterior walls.
<p>| | |</p>
<table>

<tr>
<td><strong>i.</strong></td>
<td>otherwise consistent with the amenity and character of the zone and surrounding area.</td>
</tr>
</tbody>
</table>

**E49.2**

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

**PO50**

Infrastructure does not have an impact on pedestrian health and safety.

**E50**

Access control arrangements:

a. do not create dead-ends or dark alleyways adjacent to the infrastructure;

b. minimise the number and width of crossovers and entry points;

c. provide safe vehicular access to the site;

d. do not utilise barbed wire or razor wire.

**PO51**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

a. generates no audible sound at the site boundaries where in a residential setting; or

b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**E51**

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**Sales office**(72)

The Sales office**(72)** is:

a. designed to provide functional and safe access, manoeuvring areas and car parking spaces for the number and type of vehicles anticipated to access the site;

b. temporary in nature;

c. not be isolated or separated from land being displayed for sale within the office.

Note - Refer to Planning scheme policy - Integrated design for access and crossover requirements.

**Telecommunications facility**(81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities**(81)** must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

**PO53**

</tr>
</tbody>
</table>

**PO57**

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

**E57**

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

**PO58**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

**E58**

All equipment comprising the Telecommunications facility(81) which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

**Retail, commercial and community uses**

**PO59**

Community activities:

a. are located to:
   i. cluster with other non-residential activities to form a neighbourhood hub (this may include being located within or adjacent to an existing neighbourhood hub); or
   ii. if establishing a new neighbourhood hub (as described in the PO below) be on a main street;

b. are located on allotments that have appropriate area and dimensions for the siting of:
   i. buildings and structures;

No example provided.
ii. vehicle servicing, deliveries, parking, manoeuvring and circulation;

iii. landscaping and open space including buffering;

c. are of a small scale, having regard to the surrounding character;

d. are serviced by public transport;

e. do not negatively impact adjoining residents or the streetscape.

</tbody>
</table>
**PO**

Service stations are located, designed and orientated to:

- establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;
- be in proximity of a neighbourhood hub or centre;
- not negatively impact active streets, public spaces or hubs of activity where the pedestrian safety and comfort is of high importance (e.g. in neighbourhood hubs and centres);
- not result in the fragmentation of active streets (e.g. site where active uses are located on adjoining lots);
- ensure the amenity of adjoining properties is protected;
- reduce the visual impact of the Service station from the streetscape while maintaining surveillance from the site to the street;
- minimise impacts on adjoining residential uses, to a level suitable relative to expected residential amenity of the area: (e.g. high order road in urban or next generation neighbourhood, likely to be noisy and not like suburban);
- provide ancillary uses that meet the convenience needs of users.

**E**

Service stations are located:

- adjoining or within 400m of:
  - a neighbourhood hub identified on Overlay map - Community activities and neighbourhood hubs (not on a neighbourhood hub lot), or
  - a centre zone;
- on the corner lot of an arterial or sub-arterial road.

Service stations are designed and orientated on site to:

- include a landscaping strip having a minimum depth of 1m adjoining all road frontages;
- building and structures (including fuel pump canopies) are setback a minimum of 3m from the primary and secondary frontage and a minimum of 5m from side and rear boundaries;
- include a screen fence, of a height and standard in accordance with a noise impact assessment (Note - Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise) on side and rear boundaries where adjoining land is able to contain a residential use;
- not include more than 2 driveway crossovers.

**PO63**

Non-residential uses *(excluding a Service station)* address and activate streets and public spaces by:

- ensuring buildings and individual tenancies address street frontage(s), civic space and other areas of pedestrian movement;
- new buildings adjoin or are within 3m of the primary frontage(s), civic space or public open space;
- locating car parking areas and drive through facilities behind or under buildings to not dominate the street environment;

No example provided.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>d.</strong></td>
<td>establishing and maintaining interaction, pedestrian activity and casual surveillance through appropriate land uses and building design (e.g. The use of windows or glazing and avoiding blank walls with the use of sleeving);</td>

<tr>
<td><strong>e.</strong></td>
<td>providing visual interest to the façade (e.g. Windows or glazing, variation in colours, materials, finishes, articulation, recesses or projections);</td>
</tr>
<tr>
<td><strong>f.</strong></td>
<td>establishing and maintaining human scale.</td>
</tr>
</tbody>
</table>

**PO64**

All buildings exhibit a high standard of design and construction, which:

| **a.** | add visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, cantilevered awning); |
| **b.** | enable differentiation between buildings; |
| **c.** | contribute to a safe environment; |
| **d.** | incorporate architectural features within the building facade at the street level to create human scale (e.g. cantilevered awning); |
| **e.** | include building entrances that are readily identifiable from the road frontage; |
| **f.** | locate and orientate to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites; |
| **g.** | incorporate appropriate acoustic treatments, having regard to any adjoining residential uses; |
| **h.** | facilitate casual surveillance of all public spaces. |

**PO65**

Development provides functional and integrated car parking and vehicle access, that:

| **a.** | prioritises the movement and safety of pedestrians between the street frontage and the entrance to the building; |
| **b.** | provides safety and security of people and property at all times; |
| **c.** | does not impede active frontage and active transport options; |

No example provided.
d. does not impact on the safe and efficient movement of traffic external to the site;

e. is consolidated and shared with adjoining sites wherever possible.

PO66

The safety and efficiency of pedestrian movement is prioritised in the design of car parking areas through providing pedestrian paths in car parking areas that are:

a. located along the most direct route between building entrances, car parks and adjoining uses;

b. protected from vehicle intrusion through the use of physical and visual separation (e.g. wheel stops, trees etc);

c. are of a width to allow safe and efficient access for prams and wheelchairs.

No example provided.

PO67

The number of car parking spaces is managed to:

a. avoid significant impacts on the safety and efficiency of the road network;

b. avoid an oversupply of car parking spaces;

c. avoid the visual impact of large areas of open car parking from road frontages and public areas;

d. promote active and public transport options;

e. promote innovative solutions, including on-street parking and shared parking areas.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

E67.1

Car parking is provided in accordance with Schedule 7 - Car parking.

Note - The above rates exclude car parking spaces for people with a disability required by Disability Discrimination Act 1992 or the relevant disability discrimination legislation and standards.

E67.2

All car parking areas are designed and constructed in accordance with Australian Standard AS 2890.1 Parking facilities Part 1: Off-street car parking.

PO68

a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

i. adequate bicycle parking and storage facilities; and

E68.1

Minimum bicycle parking facilities are provided in accordance with the table below (rounded up to the nearest whole number).

<table>
<thead>
<tr>
<th>Use</th>
<th>Minimum Bicycle Parking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential uses comprised of dwellings</td>
<td>Minimum 1 space per dwelling</td>
</tr>
</tbody>
</table>
ii. adequate provision for securing belongings; and

iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.

b. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

i. the projected population growth and forward planning for road upgrading and development of cycle paths; or

ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or

iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E68.2 Bicycle parking is:

a. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E68.3 For non-residential uses, storage lockers:

a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.
Editor’s note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E68.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
</tr>
<tr>
<td></td>
<td>Male</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>1 urinal and 1 closet pan, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
<td></td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:

i. a mirror located above each wash basin;

ii. a hook and bench seating within each shower compartment;

iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance.
to the building and within 50 metres of bicycle parking and storage facilities

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

**PO69**

**Loading and servicing areas:**

a. are not visible from the street frontage;
b. are integrated into the design of the building;
c. include screening and buffers to reduce negative impacts on adjoining sensitive land uses;
d. where possible loading and servicing areas are consolidated and shared with adjoining sites.

No example provided.

**PO70**

**Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy - Waste.**

Bins and bin storage area/s are designed, located and managed to prevent amenity impacts on the locality.

No example provided.  

**PO71**

**On-site landscaping is provided, that:**

a. is incorporated into the design of the development;
b. reduces the dominance of car parking and servicing areas from the street frontage;
c. retains mature trees wherever possible;
d. does not create safety or security issues by creating potential concealment areas or interfering with sightlines;
e. maintains the achievement of active frontages and sight lines for casual surveillance.

Note - All landscaping is to accord with Planning scheme policy - Integrated design.

No example provided.

**PO72**

**E72**
Surveillance and overlooking are maintained between the road frontage and the main building line.  

<table>

</tr>
</tbody>
</table>

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)**

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

**PO75**

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;

b. protects the environmental and ecological values and health of receiving waters;

c. protects buildings and infrastructure from the effects of acid sulfate soils.

**E75**

Development does not involve:

a. excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below than 5m Australian Height datum AHD; or

b. filling of land of more than 500m$^3$ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

**Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)**

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

### Vegetation clearing, ecological value and connectivity

**PO76**

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;

b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

**PO77**

No example provided.
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;

b. providing contiguous patches of habitat;

c. provide replacement and rehabilitation planting to improve connectivity;

d. avoiding the creation of fragmented and isolated patches of habitat;

e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

### PO81
Development does not:

a. result in soil erosion or land degradation;
b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

<table>
<thead>
<tr>
<th>Vegetation clearing and water quality</th>
</tr>
</thead>
</table>

### PO82
Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
b. avoiding or minimising changes to landforms to maintain hydrological water flows;
c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry and animal keeping activities.

| No example provided. |

### PO83
Development minimises adverse impacts of stormwater run-off on water quality by:

a. minimising flow velocity to reduce erosion;
b. minimising hard surface areas;
c. maximising the use of permeable surfaces;
d. incorporating sediment retention devices;
e. minimising channelled flow.

| Vegetation clearing and access, edge effects and urban heat island effects |

### PO84
Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

| No example provided. |

### PO85
Development minimises potential adverse ‘edge effects’ on ecological values by:

a. providing dense planting buffers of native vegetation between a development and environmental areas;
b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
c. restoring, rehabilitating and increasing the size of existing patches of native vegetation.

| No example provided. |
d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;

e. landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

PO86

Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

a. pervious surfaces;

b. providing deeply planted vegetation buffers and green linkage opportunities;

c. landscaping with local native plant species to achieve well-shaded urban places;

d. increasing the service extent of the urban forest canopy.

Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

PO87

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing noise impact assessment report is provided in Planning scheme policy – Noise.

PO88

Development does not increase the number of people living in the Extractive Resources separation area.

E88

One dwelling house\(^{(22)}\) permitted per lot within separation area.

PO89

Development:

a. does not introduce or increase uses that are sensitive to the impacts of an Extractive industry\(^{(27)}\);

E89

Development within the separation area does not include the following activities:

a. Caretaker's accommodation\(^{(10)}\).
<table>
<thead>
<tr>

Retirement facility\(^{(67)}\);<br>n. Rural workers’ accommodation\(^{(71)}\);<br>o. Short-term accommodation\(^{(77)}\);<br>p. Tourist park\(^{(84)}\). |
a. does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route;
b. ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility;
c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

**Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)**

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

**PO93**
Development will:

a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
b. protect the fabric and setting of the heritage site, object or building;
c. be consistent with the form, scale and style of the heritage site, object or building;
d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
f. retain public access where this is currently provided.

**E93**
Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

**PO94**
Demolition and removal is only considered where:

a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or

No example provided.
c. limited demolition is performed in the course of repairs, maintenance or restoration; or
d. demolition is performed following a catastrophic event which substantially destroys the building or object.

**PO95**

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No example provided.

**PO96**

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.

**E96**

Development does:

- a. not result in the removal of a significant tree;
- b. not occur within 20m of a protected tree;

**Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)**

**PO97**

Odour sensitive development is separated from Wastewater treatment plants so they are not adversely affected by odour emission or other air pollutant impacts.

**E97**

The following uses are not located within a wastewater treatment site buffer:

- a. Caretaker’s accommodation\(^{(10)}\);
- b. Community residence\(^{(16)}\);
- c. Dual occupancy\(^{(21)}\);
- d. Dwelling house\(^{(22)}\);
- e. Dwelling unit\(^{(23)}\);
- f. Hospital\(^{(36)}\);
- g. Rooming accommodation\(^{(69)}\);
- h. Multiple dwelling\(^{(49)}\);
- i. Non-resident workforce accommodation\(^{(52)}\);
- j. Relocatable home park\(^{(62)}\);
- k. Residential care facility\(^{(65)}\);
- l. Resort complex\(^{(66)}\);
- m. Retirement facility\(^{(67)}\);
- n. Rural workers’ accommodation\(^{(71)}\);
- o. Short-term accommodation\(^{(77)}\);
- p. Tourist park\(^{(84)}\).
Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.

Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous.

E98.2
Incineration or burial of waste within a Water supply buffer is not undertaken onsite.

E98.3
Solid waste within a Water supply buffer is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

E98.4
Holding tanks within a Water supply buffer are used for all liquid waste and provide for the separation of oils/solvents and solids prior to pump-out and collection by a licenced contractor.

E98.5
Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

PO99
On-site sewerage systems within a Water supply buffer are designed and operated to ensure there is no worsening or adverse impacts to health risks, environmental risks and water quality.

Editor's Note - For guidance refer to the Seq water Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

E99
Secondary treated wastewater treatment systems within a Water supply buffer include:

a. emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging;

b. back up pump installation and backup power;

c. MEDLI modelling to determine irrigation rates and sizing of irrigation areas;

d. vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and

e. wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities.

PO100

E100
Development:
### Development within a Bulk water supply infrastructure buffer

Development within a Bulk water supply infrastructure buffer is located, designed and constructed to:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>protect the integrity of the water supply pipeline;</td>

#### PO103

Habitable rooms within an Electricity supply substation buffer are located a sufficient distance from substations\(^{(80)}\) to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields.

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

#### E103

Habitable rooms:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>are not located within an Electricity supply substation buffer; and</td>
</tr>
<tr>
<td>b.</td>
<td>proposed on a site subject to an Electricity supply supply substation(^{(80)}) are acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.</td>
</tr>
</tbody>
</table>

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

#### PO104

No example provided.
Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation\(^{(80)}\) to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing a noise impact assessment report is provided in Planning scheme policy – Noise.

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

</tbody>
</table>
### PO112

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

### E112.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- **a. Urban area** – Level III;
- **b. Rural area** – N/A;
- **c. Industrial area** – Level V;
- **d. Commercial area** – Level V.

### PO113

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- **a.** a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- **b.** an overland flow path where it crosses more than one premises;
- **c.** inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

### E112.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

### No example provided.

### PO114

Development for a Park\(^{(57)}\) ensures that the design and layout respond to the nature of the overland flow affecting the premises such that:

- **a.** public benefit and enjoyment is maximised;
- **b.** impacts on the asset life and integrity of park structures is minimised;
- **c.** maintenance and replacement costs are minimised.

### Additional criteria for development for a Park\(^{(57)}\)

**PO114**

Development for a Park\(^{(57)}\) ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- **a.** public benefit and enjoyment is maximised;
- **b.** impacts on the asset life and integrity of park structures is minimised;
- **c.** maintenance and replacement costs are minimised.

### E114

Development for a Park\(^{(57)}\) ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.
**PO115 Development**
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- impact on fauna habitats;
- impact on wildlife corridors and connectivity;
- impact on stream integrity;
- impact of opportunities for revegetation and rehabilitation planting;
- edge effects.

**E115 Development does not occur within:**

- 50m from top of bank for W1 waterway and drainage line
- 30m from top of bank for W2 waterway and drainage line
- 20m from top of bank for W3 waterway and drainage line
- 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

### Scenic amenity - Regionally significant (Hills) and Locally important (Coast) (refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)

**PO116 Development:**

- avoids being viewed as a visually conspicuous built form on a hill top or ridgeline;
- retain the natural character or bushland settings as the dominant landscape characteristic;
- is viewed as being visually consistent with the natural landscape setting and does not diminish the scenic and visual qualities present in the environment.

**E116 Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not:**

- located on a hill top or ridge line;
- all parts of the building and structure are located below the hill top or ridge line.

**PO117 Development:**

- does not adversely detract or degrade the quality of views, vista or key landmarks;
- retains the natural character or bushland settings as the dominant landscape characteristic.

**E117 Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:**

- go across land contours, and do not cut straight up slopes;
- follow natural contours, not resulting in batters or retaining walls being greater than 900mm in height.

**PO118 Buildings and structures incorporate colours and finishes that:**

- are consistent with a natural, open space character and bushland environment;
- do not produce glare or appear visual incompatible with the surrounding natural character and bushland environment;
- are not visually dominant or detract from the natural qualities of the landscape.

**E118.1 Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:**

<table>
<thead>
<tr>
<th>Colour Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>G12 – Holly</td>
<td>G54 – Mist Green</td>
</tr>
<tr>
<td>G13 – Emerald</td>
<td>G55 – Lichen</td>
</tr>
<tr>
<td>G14 – Moss Green</td>
<td>G56 – Sage Green</td>
</tr>
<tr>
<td>N44 – Bridge Grey</td>
<td>N45 – Koala Grey</td>
</tr>
<tr>
<td>N52 – Mid Grey</td>
<td></td>
</tr>
</tbody>
</table>
### E118.2

Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures are painted or finished such that reflectivity is less than 35%.

### PO119

**Landscaping**

- a. complements the coastal landscape character and amenity;
- b. has known resilience and robustness in the coastal environment;

**Fences and walls:**

- a. do not appear visually dominant or conspicuous within its setting;
- b. reduce visual appearance through the use of built form articulation, setbacks, and plant screening;
- c. use materials and colours that are complementary to the coastal environment.

Building design responds to the bayside location and complements the particular bayside character and amenity by adopting and incorporating a range of architectural character elements.

Vegetation that contributes to bayside character and identity are:

- a. retained;
- b. protected from development diminishing their significance.

### E119

Where located in the Locally Important (Coast) scenic amenity overlay:

- a. landscaping comprises indigenous coastal species;
- b. fences and walls are no higher than 1m; and
- c. existing pine trees, palm trees, mature fig and cotton trees are retained.
- d. where over 12m in height, the building design includes the following architectural character elements:
  - i. curving balcony edges and walls, strong vertical blades and wall planes;
  - ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;
  - iii. roof top outlooks, tensile structures as shading devices;
  - iv. lightweight structures use white frame elements in steel and timber, bold colour contrast.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)
Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code.

6.2.6.3 Next generation neighbourhood precinct

6.2.6.3.1 Purpose - Next generation neighbourhood precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Next generation neighbourhood precinct:

   a. The Next generation neighbourhood precinct supports site densities between of a minimum 15 and 75 dwellings per hectare.

   b. Neighbourhoods will have a mix of residential uses, tenure and densities on a variety of lot sizes providing housing choice and affordability for different lifestyle choices and life stages to meet diverse community needs.

   c. Neighbourhoods are designed to provide well-connected, safe and convenient movement and open space networks through interconnected streets and active transport linkages that provide high levels of accessibility between residences, open space areas and places of activity.

   d. Medium to high density uses (e.g. Multiple dwelling\(^{(49)}\), Relocatable home park\(^{(62)}\), Residential care facility\(^{(65)}\), Retirement facility\(^{(67)}\), Rooming accommodation\(^{(69)}\), Short-term accommodation\(^{(77)}\)) are located in proximity to a range of services and public transport stops(s) or station(s).

   e. The design, siting and construction of residential uses are to:
      i. contribute to an attractive streetscape with priority given to pedestrians;
      ii. encourage passive surveillance of public spaces;
      iii. results in privacy and residential amenity consistent with the low to medium density residential character intended for the area;
      iv. provide a diverse and attractive built form;
      v. orientate to integrate with the street and surrounding neighbourhood;
      vi. incorporate sub-tropical urban design principles that respond to local climatic conditions;
      vii. incorporate sustainable practices including maximising energy efficiency and water conservation;
      viii. incorporate natural features and respond to site topography;
      ix. cater for appropriate car parking and manoeuvring areas on-site;
      x. be of a scale and density consistent with the low to medium density residential character intended for the area;
      xi. provide urban services such as reticulated water, sewerage, sealed roads, parks and other identified infrastructure;
      xii. ensure domestic outbuildings are subordinate in appearance and function to the dwelling.

   f. Home based business can only be established where the scale and intensity of the activity does not detrimentally impact upon the character and amenity associated with the surrounding area. Specifically, Home based business does not include the sale or restoration of more than 4 vehicles in any calendar year or, undertake a mechanical repairs or panel beating activity associated with a business at the subject premises.

   g. Non-residential uses in the next generation neighbourhood precinct take the form of community activities, corner stores, neighbourhood hubs or local centres.

   h. Community activities:
i. establish in a location that may be serviced by public transport;

ii. do not negatively impact adjoining residents or the streetscape;

iii. do not undermine the viability of existing or future centres.

i. Corner stores may establish as a standalone use (not part of a neighbourhood hub) where:

   i. the store is of a scale that remains subordinate to all centres and neighbourhood hubs within the region;

   ii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. The corner store should not be within 1600m of another corner store, neighbourhood hub or centre measured from the centre of the corner store, neighbourhood hub or centre;

   iii. they are appropriately designed and located to include active frontages.

j. Retail and commercial activities (forming part of a neighbourhood hub) (excluding Service stations):

   i. cluster with other non-residential uses (excluding corner stores) forming a neighbourhood hub;

   ii. are centred around a 'Main Street' central core fostering opportunities for social and economic exchange;

   iii. are of a small scale, appropriate for a neighbourhood hub;

   iv. do not negatively impact adjoining residents or the streetscape;

   v. are subordinate in function and scale to all centres within the region.

k. Service stations:

   i. establish where they will not disrupt, fragment or negatively impact active frontages (e.g. within a neighbourhood hub);

   ii. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;

   iii. establish in locations that will not have a negative impact on the street environments intended to include active frontages (e.g. Neighbourhood hubs or centres);

   iv. do not negatively impact adjoining residents or the streetscape;

   v. ancillary uses or activities only service the convenience needs of users.

l. The design, siting and construction of non-residential uses:

   i. maintains a human scale, through appropriate building heights and form;

   ii. provides attractive, active frontages that maximise pedestrian activity along road frontages, movement corridors and public spaces (excluding Service stations);

   iii. provides for active and passive surveillance of road frontages, movement corridors and public spaces;
iv. promotes active transport options and ensures an oversupply of car parking is not provided;

v. locates car parking so as not to dominate the street;

vi. does not result in large internalised shopping centres\(^{(76)}\) (e.g. large blank external walls with tenancies only accessible from within the building) surrounded by expansive areas of surface car parking.

m. Neighbourhood hub expansion (into adjoining lots) or the establishment of a new neighbourhood hub only occurs where:

i. it is of a scale that remains subordinate to all centres within the region;

---

Note - Retail and commercial uses that will result in a new or existing neighbourhood hub expanding to a scale and function more consistent with a Local centre are to be assessed as if establishing a new Local centre. Refer to the Centre zone code for relevant assessment criteria.

---

ii. the expansion (into adjoining lots) will strengthen the existing neighbourhood hub as an important neighbourhood activity node;

iii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. New neighbourhood hubs are to service a currently unserviced catchment. The centre of a neighbourhood hub should not be located within 1600m of another neighbourhood hub or centre measured from the centre of each hub or centre;

iv. for a new neighbourhood hub, it is located on sub-arterial or collector road;

v. they are appropriately designed and located to include active frontages around a 'main street' core and are staged where relevant to retain key (highly accessible) sites for long term development.

n. General works associated with the development achieves the following:

i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);

ii. the development manages stormwater to:

A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
B. prevent stormwater contamination and the release of pollutants;
C. maintain or improve the structure and condition of drainage lines and riparian areas;
D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;

iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

o. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

p. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

q. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

r. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.
s. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;

B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;

C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;

B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;

C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;

D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

t. Development in the Next generation neighbourhood precinct includes 1 or more of the following:

- Child care centre\(^{(13)}\)
- Clubs\(^{(14)}\)
- Community care centre\(^{(15)}\)
- Community residence\(^{(16)}\)
- Community use\(^{(17)}\)
- Home based business\(^{(35)}\)
- Multiple dwelling\(^{(49)}\)
- Place of worship\(^{(60)}\)
- Relocatable home park\(^{(62)}\)
- Residential care facility\(^{(65)}\)
- Sales office\(^{(72)}\)
- Shop\(^{(75)}\) - if for a corner store
- Short-term accommodation\(^{(77)}\) - if within 800m walking distance of a higher order or district centre
### 6 Zones

- Dual occupancy
- Dwelling house
- Dwelling unit
- Educational establishment
- Emergency services
- Health care services
- Retirement facility
- Rooming accommodation
- Where in a Neighbourhood hub:
  - Food and drink outlet
  - Hardware and trade supplies
  - Health care services
  - Indoor sport and recreation - for a gymnasium
  - Office
  - Service Industry
  - Shop
  - Shopping centre
  - Veterinary services

#### Note
Refer to Overlay map - Centre walking distances

#### u. Development in the Next generation neighbourhood precinct does not include any of the following:

- Adult store
- Agricultural supplies store
- Air services
- Animal husbandry
- Animal keeping
- Aquaculture
- Bar
- Brothel
- Cemetery
- Crematorium
- Cropping
- Detention facility
- Extractive industry
- Hardware and trade supplies - if 250m² GFA or more
- High impact industry
- Hotel
- Intensive animal industry
- Intensive horticulture
- Low impact industry
- Marine industry
- Medium impact industry
- Motor sport facility
- Nature-based tourism
- Nightclub entertainment facility
- Non-resident workforce accommodation
- Outdoor sales
- Permanent plantation
- Port services
- Renewable energy facility
- Research and technology industry
- Rural industry
- Rural workers' accommodation
- Service Station - if standalone use
- Showroom
- Special industry
- Theatre
- Tourist attraction
- Transport depot
- Warehouse
- Wholesale nursery
- Winery

#### v. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

### 6.2.6.3.2 Accepted development subject to requirements
If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part E, Table 6.2.6.3.1. Where the development does not meet a requirement for accepted development (RAD) within Part E Table 6.2.6.3.1, the category of development changes to assessable development under the rules outlined in section 5.3.3. (1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

#### General requirements

<table>
<thead>
<tr>
<th>Requirements for accepted development</th>
</tr>
</thead>
<tbody>
<tr>
<td>General requirements</td>
</tr>
</tbody>
</table>
Building height (Residential uses)

**RAD1** Building height does not exceed:

a. that mapped on Overlay map – Building heights; or

b. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.

Building height (Non-residential uses)

**RAD2** Building height does not exceed the maximum height identified on Overlay map - Building heights.

Setbacks (Residential uses)

**RAD3** Setbacks (excluding built to boundary walls) comply with Table 6.2.6.3.3 'Setbacks' - Setback (Residential uses).

Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

**RAD4** Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:

a. only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.6.3.4;

b. of a length and height not exceeding that specified in Table 6.2.6.3.4 'Built to boundary walls (Residential uses)';

c. setback from the side boundary:
   0. not more than 20mm; or
   i. if a plan of development provides for only one built to boundary wall on the boundary, not more than 150mm; or
   ii. if a built to boundary wall may be built on each side of the same boundary, not more than 20mm

d. on the low side of a sloping lot.

Editor's note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to boundary walls on adjacent lots a 'High Density Development Easement' is recommended; or for all other built to boundary walls a 'easement for maintenance purposes' is recommended.

Site cover (Residential uses)

**RAD5** Site cover (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures) does not exceed the specified percentages in the table below.

<table>
<thead>
<tr>
<th>Building height</th>
<th>Lot Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>300m² or less</td>
<td>301 - 400m²</td>
</tr>
<tr>
<td>8.5m or less</td>
<td>75%</td>
</tr>
</tbody>
</table>
Lighting

RAD6

Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.

Clearing of habitat trees where not located in the Environmental areas overlay map

RAD7

Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:

a. Clearing of a habitat tree located within an approved development footprint;

b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

Works requirements

Utilities

RAD8

Where available, the development is connected to:

a. an existing reticulated electricity supply;

b. telecommunications and broadband.
c. reticulated sewerage;
d. reticulated water;
e. sealed and dedicated road.

Development is provided with an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).

RAB9 Where involving an extension (building work) in front of the main building line and where the lot adjoins or is opposite to a park**, foreshore or Humpymbong Reserve, all existing overhead power lines are to be undergrounded for the full frontage of the lot.

### Access

**RAD** The frontage road is fully constructed to Council’s standards.

*Note - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures;*

*Note - Frontage roads include streets where no direct lot access is provided.*

**RAD10** Any new or changes to existing direct vehicle access for residential development does not occur from arterial or sub-arterial roads.

**RAD11** The driveway construction across the verge conforms to the relevant standard for the classification of the road in accordance with Planning scheme policy - Integrated design.

**RAD12** Any new or changes to existing site access crossovers and driveways are designed, and located and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. where for a Council-controlled road; and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
### RAD13

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS 2890.1 Parking Facilities **Part 1**: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

### RAD

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

### Stormwater

### RAD14

Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

### RAD15

Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

a. is for urban purposes only;
b. involves a land area greater than 2500m²;
c. will result in 6 or more dwellings; OR
   will result in an impervious area greater than 25% of the net developable area.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and
b. that results in 6 or more dwellings; or

Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design 'Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland' and Planning scheme policy – Integrated design.

### RAD

Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

### RAD

Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties.
**Note** - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

**RAD**

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with Sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits.</td>
</tr>
</tbody>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning scheme policy - Integrated design (Appendix C) for easement requirements over open channels.

### Site works and construction management

**RAD16**
The site and any existing structures are to be maintained in a tidy and safe condition.

**RAD17**
Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy—Stormwater management and Planning scheme policy—Integrated design.

Development does not cause erosion or allow sediment to leave the site.

Note - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation.

**RAD**
No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

**RAD**
Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented.

**RAD20**
Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.
| RAD18 | Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. |
| RAD21 | Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times. |
| RAD19 | All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.  
Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works. |
| RAD | Disposal of materials is managed in one or more of the following ways:  
a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or  
b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.  
Note - No burning of cleared vegetation is permitted.  
Note - The chipped vegetation must be stored in an approved location. |
| RAD | All development works are carried out within the following times:  
a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;  
b. no work is to be carried out on Sundays or public holidays. |

### Earthworks

| RAD23 | The total of all cut and fill on-site does not exceed 900mm in height.  
**Figure—Cut-and-Fill**  
Note—This is site earthworks not building work.  
Filling or excavation does not:  
a. involve a change in level of more than 1.0m relative to natural ground level  
OR |
result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

**Figure - Filling or Excavation**

RAD Cut and fill batters, (other than batters to dams and water impoundments), have a finished slope no steeper than the following:

a. any cut batter is no steeper than 1V in 4H;

b. any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;

c. any compacted fill batter is no steeper than 1V in 4H;

RAD All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

RAD Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

Note - Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.

RAD All fill and excavation is contained on-site and is free draining.

RAD Earthworks undertaken on the development site are shaped in a manner which does not:
a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
b. redirect stormwater surface flow away from existing flow paths; or
c. divert stormwater surface flow onto adjacent land (other than a road) in a manner which:
   i. concentrates the flow; or
   ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
   iii. causes actionable nuisance to any person, property or premises.

<table>
<thead>
<tr>
<th>All fill placed on-site is:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. limited to that necessary for the approved use;</td>
</tr>
<tr>
<td>b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.</td>
</tr>
</tbody>
</table>

| The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798. |
| Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures |

| No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity. |
| Note - Public sector entity is defined in Schedule 2 of the Act. |

| Filling or excavation that would result in any of the following is not carried out on site: does not result in: |
| a. reduction in cover over any Council or public sector entity infrastructure to less than 600mm; |
| b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken; |
| c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes. |

| Note - Public sector entity is defined in Schedule 2 of the Act. |

| Fire services |
| Note - The provisions under this heading only apply if: |
| a. the development is for, or incorporates: |
|   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or |
|   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or |
iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or
iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

RAD25 External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. - for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities; and

   d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.

RAD26 A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

   a. an unobstructed width of no less than 3.5m;
   b. an unobstructed height of no less than 4.8m;
   c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
   d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

RAD27 On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

RAD28 For development that contains on-site fire hydrants external to buildings:
a. those external hydrants can be seen from the vehicular entry point to the site; or
b. a sign identifying the following is provided at the vehicular entry point to the site:
   i. the overall layout of the development (to scale);
   ii. internal road names (where used);
   iii. all communal facilities (where provided);
   iv. the reception area and on-site manager’s office (where provided);
   v. external hydrants and hydrant booster points;
   vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:
a. in a form;
b. of a size;
c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

RAD29
For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

## Use specific requirements

### Dual occupancies

| RAD30 | Dual Occupancies<sup>(21)</sup> are located on lots with a total road frontage of 25m or greater. |

### Home based business

| RAD31 | Home based business(s)<sup>(35)</sup> are fully enclosed within the existing dwelling or on-site structure. |
| RAD32 | A maximum of 1 employee (not a resident) OR 2 customers OR customers from within 1 Small rigid vehicle (SRV) or smaller are permitted on the site at any one time. |
| RAD33 | Service and delivery vehicles do not exceed one Small rigid vehicle (SRV) at any one time. |
| RAD34 | Vehicle parking for the Home based business<sup>(35)</sup> on-site is limited to 1 car or Small rigid vehicle (SRV). |
| RAD35 | Home based business(s)<sup>(35)</sup> occupy an area of the existing dwelling or on-site structure not greater than 40m² gross floor area. |
| RAD36 | Home based business(s)<sup>(35)</sup> do not involve manufacturing. |

Note - Manufacturing as defined in the Food Act 2006 is permitted. Food businesses that are licensable by local government and only involve the manufacturing of non-potentially hazardous food are permitted. Definitions in the Food Act 2006 apply to this note.
The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

The hours of operation do not exceed 8:00am to 6:00pm, Monday to Saturday and are not open to the public on Sunday’s, Christmas Day, Good Friday and Anzac Day.

Note - Office or administrative activities that do not generate non-residents visiting the site, such as book-keeping and computer work, may operate outside the hours of operation.

For a bed and breakfast, the use:

a. is fully contained within the existing dwelling on-site;

b. occupies a maximum of 2 bedrooms;

c. includes the provision of a minimum of 1 meal per day;

d. accommodates a maximum of 6 people at any one time.

Note - For a Bed and Breakfast SO31 - SO37 above do not apply.

Sales office (72)

Car parking spaces are provided in accordance with Table 6.2.6.3.5 'Car parking spaces'.

Car parking and manoeuvring areas are designed and constructed in accordance with the Australian Standards AS2890.1.

Sales office (72) has direct vehicular access to a dedicated road constructed in accordance with Planning scheme policy - Integrated design.

Fencing adjoining a street (other than a laneway) or public open space does not exceed 1.2 metres in height.

30% of the front façade of the building (excluding the garage and front door) is made up of windows/glazing.

The Sales office (72) has a clearly identifiable pedestrian entry that is visible and accessible from the primary frontage.

The use of the premises for a Sales office (72) is for a maximum of 2 years after the commencement of the use.

Telecommunications facility (81)

Editor’s note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3kHz to 300GHz.

A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

Equipment shelters and associated structures are located:
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>directly beside the existing equipment shelter and associated structures;</td>
</tr>
<tr>
<td>b.</td>
<td>behind the main building line;</td>
</tr>
<tr>
<td>c.</td>
<td>further away from the frontage than the existing equipment shelter and associated structures;</td>
</tr>
<tr>
<td>d.</td>
<td>a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.</td>
</tr>
<tr>
<td>RAD49</td>
<td>Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.</td>
</tr>
<tr>
<td>RAD50</td>
<td>The facility is enclosed by security fencing or by other means to ensure public access is prohibited.</td>
</tr>
<tr>
<td>RAD51</td>
<td>A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.</td>
</tr>
</tbody>
</table>

   Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design. |
| RAD52 | All equipment comprising the telecommunications facility(81) which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary. |

### Retail, commercial and community uses

| RAD53 | Where involving an extension (building work) in the front setback a minimum of 50% of the front facade of the building is made up of windows or glazing between a height of 1m and 2m. The minimum window/glazing is to remain uncovered and free of signage. Any tinting, signage or vinyl wrap applied to a glazed facade located at ground floor level is to maintain visibility of the internal activity from the street and not obscure surveillance of the street. |

   Figure - Glazing

| RAD54 | Development does not result in a reduction in the number or standard of car parking spaces provided on the site except where a reduction is required for the provision of cycle parking. |
| RAD55 | Where additional car parking spaces are provided they are not located between the frontage and the main building line. |
Where involving an extension (building work), bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.

Where involving an extension (building work) it does not result in a reduction in the amount or standard of established landscaping on-site.

Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of *Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting*.

Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.

Hours of operation do not exceed 6:00am to 9:00pm Monday to Sunday.

Development does not involve a drive through facility.

Values and constraints requirements

Note - The relevant values and constraints requirements do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m$^3$ and 500m$^3$ respectively.

Development does not involve:

a. excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below 5m Australian Height Datum AHD, or

b. filling of land of more than 500m$^3$ of material with an average depth of 0.5m or greater where below the 5m AHD.

Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

| RAD61 | Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house(22) or extension to an existing dwelling house(22) only on lots less than 750m².

Editor's note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor's note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;
ii. be the least valued area of koala habitat on the site;
iii. minimise the footprint of the development envelope area;
iv. minimise edge effects to areas external to the development envelope;
v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;
vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

| RAD62 | No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer. |
This does not apply to the following:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

### Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following requirements apply)

### Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following requirements apply)

#### RAD66
The following uses are not located within the 100m wide transport route buffer:

- **a.** Caretaker’s accommodation<sup>(10)</sup>, except where located in the Extractive industry zone;
- **b.** Community residence<sup>(16)</sup>;
- **c.** Dual occupancy<sup>(21)</sup>;
- **d.** Dwelling house<sup>(22)</sup>;
- **e.** Dwelling unit<sup>(23)</sup>;
- **f.** Hospital<sup>(36)</sup>;
- **g.** Rooming accommodation<sup>(69)</sup>;
- **h.** Multiple dwelling<sup>(49)</sup>;
- **i.** Non-resident workforce accommodation<sup>(52)</sup>;
- **j.** Relocatable home park<sup>(62)</sup>;
- **k.** Residential care facility<sup>(65)</sup>;
- **l.** Resort complex<sup>(66)</sup>;
- **m.** Retirement facility<sup>(67)</sup>;
- **n.** Rural workers’ accommodation<sup>(71)</sup>;
- **o.** Short-term accommodation<sup>(77)</sup>;
- **p.** Tourist park<sup>(84)</sup>.

#### RAD67
Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.

#### RAD68
A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

#### RAD69
Development is for the preservation, maintenance, repair and restoration of the site, object or building.
This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

**RAD70**
A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

**RAD71**
Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

**RAD72**
The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;

b. laying of overhead or underground services;

c. any sealing, paving, soil compaction;

d. any alteration of more than 75mm to the ground surface level prior to work commencing.

**RAD73**
Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

**Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following requirements apply)**

**RAD74**
Development does not include the following uses within a Wastewater treatment site buffer:

a. Caretaker’s accommodation¹⁰;

b. Community residence¹⁶;

c. Dual occupancy²¹;

d. Dwelling house²²;

e. Dwelling unit²³;

f. Hospital³⁶;

g. Rooming accommodation⁶⁹;

h. Multiple dwelling⁴⁹;

i. Non-resident workforce accommodation⁵²;

j. Relocatable home park⁶²;

k. Residential care facility⁶⁵;

<tr>
<td>RAD76</td>
<td>Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.</td>
</tr>
</tbody>
</table>
| RAD77 | Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):  
  a. buildings or structures;  
  b. gates and fences;  
  c. storage of equipment or materials;  
  d. landscaping or earthworks or stormwater or other infrastructure. |  |
| RAD78 | On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected. |  |
| RAD79 | On-site sewerage facilities in a Water supply buffer for a dwelling house<sup>(22)</sup> include:  
  a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time;  
  b. a reserve land application area of 100% of the effluent irrigation design area;  
  c. land application areas that are vegetated;  
  d. the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area);  
  e. wastewater collection and storage systems must have capacity to accommodate full load at peak times. |  |
| RAD80 | On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging. |  |
| RAD81 | Development involving Permanent plantation<sup>(59)</sup> within a Water supply buffer maintains a minimum of 30% ground cover at all times. |  |
| RAD82 | Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer. |  |
| RAD83 | Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer. |  |
### RAD84

Development does not include the following uses located within a landfill site buffer:

a. caretaker’s accommodation\(^{(10)}\);
b. community residence\(^{(16)}\);
c. dual occupancy\(^{(21)}\);
d. dwelling house;\(^{(22)}\)
e. dwelling unit\(^{(23)}\);
f. hospital\(^{(36)}\);
g. rooming accommodation\(^{(69)}\);
h. multiple dwelling\(^{(49)}\);
i. non-resident workforce accommodation\(^{(52)}\);
j. relocatable home park\(^{(62)}\);
k. residential care facility\(^{(65)}\);
l. resort complex\(^{(66)}\);
m. retirement facility\(^{(67)}\);

Development does not include the following uses located within an electricity supply substation buffer are:

- located a minimum of 10m from an electricity supply substation\(^{(80)}\); and
- acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.

### RAD85

All habitable rooms located within an electricity supply substation buffer are:

- located a minimum of 10m from an electricity supply substation\(^{(80)}\); and
- acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.

### RAD86

Development does not involve the construction of any buildings or structures containing habitable rooms or sensitive land uses within a high voltage electricity line buffer.

### Overland flow path (refer Overlay map - Overland flow path to determine if the following requirements apply)

**RAD87**

Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.

**RAD88**

Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.
| RAD89 | Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable. |
| RAD90 | Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area. |
| RAD91 | Development for a material change of use or building work for a Park(57) ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design. |

### Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following requirements apply)

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

| RAD92 | No development is to occur within: |
|       | a. 50m from top of bank for W1 waterway and drainage line |
|       | b. 30m from top of bank for W2 waterway and drainage line |
|       | c. 20m from top of bank for W3 waterway and drainage line |
|       | d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands. |

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

### Scenic amenity - Regionally significant (Hills) and Locally important (Coast) - (refer Overlay map - Scenic amenity to determine if the following requirements apply)

| RAD93 | Where located in the Locally important (Coast) scenic amenity overlay; |
|       | a. landscaping comprises indigenous coastal species; |
|       | b. fences and walls facing the coast are no higher than 1m. Where fences and walls are higher than 1m, they have 50% transparency. This does not apply to a fence or wall at an angle of 90o to the coast; |
|       | c. where over 12m in height, the building design includes the following architectural character elements: |
|       | i. curving balcony edges and walls, strong vertical blades and wall planes; |
ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;

iii. rooftop outlooks, tensile structure as shading devices; and

iv. lightweight structures use white frame elements in steel and timber, bold colour contrast.

d. existing pine trees, palm trees, mature fig and cotton trees are retained.

Note - A list of appropriate indigenous coastal species is identified in Planning scheme policy - Integrated design.

Transport noise corridors (refer Overlay map - Transport noise corridors)

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part F—Criteria for assessable development - Next generation neighbourhood precinct
Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part F, Table 6.2.6.3.2 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

**Table 6.2.6.3.2 Assessable development - Next generation neighbourhood precinct**

<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Density</strong></td>
<td></td>
</tr>
<tr>
<td>PO1</td>
<td></td>
</tr>
<tr>
<td>The Next generation neighbourhood precinct has a low to medium residential density of between 15 and 75 dwellings per ha (site density): Development in the Next generation neighbourhood precinct achieves a minimum residential density of 15 dwellings per hectare (site density):</td>
<td>No example provided.</td>
</tr>
<tr>
<td><strong>Building height (Residential uses)</strong></td>
<td></td>
</tr>
<tr>
<td>PO2</td>
<td></td>
</tr>
<tr>
<td>Buildings and structures have a height that: a. is consistent with the low to medium rise character of the Next Generation Neighbourhood precinct; b. responds to the topographic features of the site, including slope and orientation; c. is not visually dominant or overbearing with respect to the streetscape, street conditions (e.g. street width) or adjoining properties; d. positively contributes to the intended built form of the surrounding area;</td>
<td>E2</td>
</tr>
<tr>
<td>Editor's note - There are circumstances where the Next generation neighbourhood precinct is intended to have a low rise character or a medium to high rise character. These circumstances are identified as having a maximum building height less than 12m or more than 12m on Overlay map - Building heights respectively. Alternatives are to be considered in relation to the intended low rise or medium to high rise character for that specific area.</td>
<td>Building height does not exceed: a. that mapped on Overlay map – Building heights; or b. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.</td>
</tr>
</tbody>
</table>

Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height, setbacks, site cover, building bulk and

Moreton Bay Regional Council Planning Scheme V5 Consultation Version commencing 22 July 2019 1885
mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution.

e. responds to the height of development on adjoining land where contained within another precinct or zone.

Note - Refer to Planning scheme policy - Residential design for details and examples.

### Building height (Non-residential uses)

**PO3**

The height of non-residential buildings does not adversely affect amenity of the area or of adjoining properties and positively contributes to the intended built form of the surrounding area.

Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height; setbacks, site cover, building bulk and mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution.

### Setbacks (Residential uses)

**PO4**

Residential buildings and structures are setback to:

- a. be consistent with the low to medium density next generation neighbourhood character intended for the area, where buildings are positioned closer to the footpath to create more active frontages and maximise private open space at the rear;

- b. result in development not being visually dominant or overbearing with respect to the streetscape and the adjoining sites;

- c. maintain private open space areas that are of a size and dimension to be usable and functional;

- d. maintain the privacy of adjoining properties;

- e. ensure parked vehicles do not restrict pedestrian and traffic movement and safety;

- f. limit the length, height and openings of boundary walls to maximise privacy and amenity on adjoining properties;

E4.1

Setbacks (excluding built to boundary walls) comply with Table 6.2.6.3.3 'Setbacks' - Setback (Residential uses).

Note - greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

E4.2

Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:

- a. only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.6.3.4; 

- b. of a length and height not exceeding that specified in Table 6.2.6.3.4 'Built to boundary walls (Residential uses)';

- c. setback from the side boundary:

  0. net more than 20mm; or
g. provide adequate separation to particular infrastructure and waterbodies to minimise adverse impacts on people, property, water quality and infrastructure;

h. ensure built to boundary walls do not create unusable or inaccessible spaces and do not negatively impact the streetscape character, amenity or functionality of adjoining properties.

Note - Refer to Planning scheme policy - Residential design for details and examples.

i. if a plan of development shows provides for only one built to boundary wall on the one boundary, not more than 150 200mm; or

ii. if a built to boundary wall may be built on each side of the same boundary, not more than 20mm

d. on the low side of a sloping lot.

Editor's note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to boundary walls on adjacent lots a 'High Density Development Easement' is recommended; or for all other built to boundary walls a 'easement for maintenance purposes' is recommended.

### Setbacks (Non-residential uses)

**PO5**

Front setbacks ensure non-residential buildings address and actively interface with streets and public spaces.

**E5.1**

For the primary frontage buildings are constructed:

a. to the property boundary; or

b. setback a maximum of 3m from the property boundary, where for the purpose of outdoor dining.

**E5.2**

For the secondary frontage, setbacks are consistent with adjoining buildings.

**PO6**

Side and rear setbacks cater for driveway(s), services, utilities and buffers required to protect the amenity of adjoining sensitive land uses and the development will not be visually dominant or overbearing with respect to adjoining properties.

No example provided.

### Site cover (Residential uses)

**PO7**

Residential buildings and structures will ensure that site cover:

a. does not result in a site density that is inconsistent with the character of the area;

b. does not result in an over development of the site;

**E7**

Site cover (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures) does not exceed the specified percentages in the table below.

<table>
<thead>
<tr>
<th>Building height</th>
<th>Lot Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>300m² or less</td>
<td>301-400m²</td>

Note - Refer to Planning scheme policy - Residential design for method of calculation.

Movement network

PO8
Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

E8.1
Development provides and maintains the connections shown on: the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

a. 'Figure 6.2.6.3.1 - Dakabin'—Dakabin;
b. 'Figure 6.2.6.3.2 - Griffin'—Griffin;
c. 'Figure 6.2.6.3.3 - Mango Hill East'—Mango Hill East;
d. 'Figure 6.2.6.3.4 - Murrumba Downs'—Murrumba Downs;
e. 'Figure 6.2.6.3.5 - Narangba East'—Narangba;
f. 'Figure 6.2.6.3.6 - Rothwell'—Rothwell.

E8.2
All other areas; For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.

Water sensitive urban design

PO9
Best practice Water Sensitive Urban Design (WSUD) is incorporated within development sites adjoining street frontages to mitigate impacts of stormwater run-off in accordance with Planning scheme policy - Integrated design.

No example provided.

Sensitive land use separation

PO10
Development is designed and operated to ensure that:
Sensitive land uses within 250m of land in the Industry zone - general industry precinct must mitigate any potential exposure to industrial air, noise or odour emissions that impact on human health, amenity and wellbeing.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy – Noise

| a. | it meets the criteria outlined in the Planning Scheme Policy – Noise; and |
| b. | the air quality objectives in the Environmental Protection (Air) Policy 2008, are met. |

### Amenity

**PO11**

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

No example provided.

### Noise

**PO12**

Noise generating uses do not adversely affect existing or potential noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

**PO13**

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

| a. | contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc); |
| b. | maintaining the amenity of the streetscape. |

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

**E13.1**

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

**E13.2**

Noise attenuation structures (e.g. walls, barriers or fences):

| a. | are not visible from an adjoining road or public area unless: |
| i. | adjoining a motorway or rail line; or |
| ii. | adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible. |

</table>
The layout of the development does not compromise:

- the development of the road network in the area;
- the function or safety of the road network;
- the capacity of the road network.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Direct vehicle access for residential development does not occur from arterial or sub-arterial roads or a motorway.

Editor's note - Residential developments should consider amalgamation with the lot to the rear and gaining access via a laneway.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

### E23.2

The development provides for the extension of the road network in the area in accordance with Council’s road network planning.

### E23.3

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council’s road planning.

### E23.4

The lot development layout allows forward vehicular access to and from the site.

### PO24

Safe access is provided for all vehicles required to access the site.

### E24.1

Site access and driveways are designed and located and constructed in accordance with:

- where for a Council-controlled road and associated with a Dwelling house:
  - Planning scheme policy - Integrated design;
- Where for a Council-controlled road, and not associated with a Dwelling house:
  - AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
  - AS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
  - Planning scheme policy - Integrated design;
  - Schedule 8 - Service vehicle requirements;
- Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEA standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
E24.2
Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking;

b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

E24.3
Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

E24.4
The driveway construction across the verge conforms to the relevant standard drawing for the classification of the road in accordance with Planning scheme policy - Integrated design.

E
Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO
Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor's Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

E
Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.
### Street design and layout

**PO**

Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:

- **a.** access to premises by providing convenient vehicular movement for residents between their homes and the major road network;
- **b.** safe and convenient pedestrian and cycle movement;
- **c.** adequate on street parking;
- **d.** stormwater drainage paths and treatment facilities;
- **e.** efficient public transport routes;
- **f.** utility services location;
- **g.** emergency access and waste collection;
- **h.** setting and approach (streetscape, landscaping and street furniture) for adjoining residences;
- **i.** expected traffic speeds and volumes; and
- **j.** wildlife movement.

**Note:** Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

**Note:** Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.
### PO25

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- b. ensure the orderly and efficient continuation of the active transport network;
- c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy—Integrated design.

**Note:** An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy—Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy—Integrated transport assessment.

**Note:** The road network is mapped on Overlay map—Road hierarchy.

**Note:** The primary and secondary active transport network is mapped on Overlay map—Active transport.

**Note:** To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

i. Where the street is partially established to an urban standard: match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or

ii. Where the street is not established to an urban standard: prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy—Integrated Design can be achieved in the existing reserve.

**Note:** Refer to Planning scheme policy—Integrated design for road network and active transport network design standards.

The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

**Note:** An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy—Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion.
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m² Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m² GFA;
- Warehouses and Industry greater than 6000m² GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissect or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

   i. 600 metres in the Coastal communities precinct and Suburban neighbourhood precinct;
   ii. 500 metres in the Next generation neighbourhood precinct;
   iii. 400 metres in the Urban neighbourhood precinct.

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (ie. left in/left out only) at intersections with sub-arterial roads or arterial roads.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO.

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

Note - Roads are considered to be constructed in accordance with Council's standards when there is sufficient pavement width; geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Stormwater

Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient.

The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design.

Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM.
| PO | Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment. |
| E | Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM.  
   Note - Development provides roof and allotment (inter-allotment – QUDM level III) drainage, including bunds, to all lots that have a gradient less than 1 in 100 (for the whole of the allotment) to the road. The inter-allotment drainage system (including easements) is provided in accordance with Planning scheme policy - Integrated design (Appendix C); |
| PO | The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site. |
| E | The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots. |
| E | Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas; |
| E | The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel.  
   Note - Refer to QUDM for recommended average flow velocities; |
<p>| PO | Provide measures to properly manage surface flows for the 1% AEP event (for the fully developed catchment) draining to and through the land to ensure no actionable nuisance is created to any person or premises as a result of the development. The development must not result in ponding on adjacent land, redirection of surface flows to other premises or blockage of a surface flow relief path for flows exceeding the design flows for any underground system within the development. |
| E | The stormwater drainage system is designed and constructed in accordance with Planning scheme policy - Integrated design. |
| PO26 | No example provided. |</p>
<table>
<thead>
<tr>
<th>Stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises.</th>

</thead>
<tbody>
<tr>
<td><strong>Note</strong> - Refer to Planning scheme policy - Integrated design for details.</td>
</tr>
<tr>
<td><strong>Note</strong> - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.</td>
</tr>
<tr>
<td><strong>Note</strong> - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.</td>
</tr>
</tbody>
</table>

**PO27**

Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.

**Note** - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

**PO28**

Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 2 of the SPP.

**Note** - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

**Where development:**

a. **is for an urban purpose that involves a land area 2500m² or greater in size; and**  
b. **results in 6 or more dwellings; or**  
c. **results in an impervious area greater than 25% of the net developable area,**

Stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.
**PO29**

Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;
b. overland flow paths where they cross more than one property boundary.

**Note**—Refer to Planning scheme policy—Integrated design for details.

**E**

No example provided.

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land (including inter-allotment drainage) is protected by easements in favour of Council. Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225m diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</td>
</tr>
</tbody>
</table>

**PO**

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

**PO**

Council is provided with accurate representations of the completed stormwater management works within residential developments.

**E**

“As Built” drawings and specifications of the stormwater management devices certified by an RPEQ is provided.

**Note**—Documentation is to include:

a. photographic evidence and inspection date of the installation of approved underdrainage.

</table>

| E31.2 | Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement. |
of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

E31.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

E31.4

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.

PO32

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

E32

No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

PO33

All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.

Note - A Traffic Management Plan may be required to demonstrate compliance with this PO: A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

Note - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less; and:

E33.1

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

E33.2

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD):
a. the aggregate volume of imported or exported material is greater than 1000 m$^3$; or
b. the aggregate volume of imported or exported material is greater than 200 m$^3$ per day; or
c. the proposed haulage route involves a vulnerable land use or shopping centre.

Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.

Editor's note - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

E33.3

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

E

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Note - A dilapidation report may be required to demonstrate compliance with this E.

E

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

E

Access to the development site is obtained via an existing lawful access point.

PO34

All disturbed areas are to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

E34

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. grassed stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

</tr>
</tbody>
</table>

| **PO36** | No example provided. |
Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

Earthworks

PO37

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

a. the natural topographical features of the site;
b. short and long-term slope stability;
c. soft or compressible foundation soils;
d. reactive soils;
e. low density or potentially collapsing soils;
f. existing fill and soil contamination that may exist on-site;
g. the stability and maintenance of steep rock slopes and batters;
h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note—Filling or excavation works are to be completed within six months of the commencement date.

E37.1

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

E37.2

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

E37.3

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

E37.4

All fill batters steeper than 1 (V) in 6 (H) on residential lots are fully turfed to prevent scour and erosion.

E37.5

All filling or excavation is contained on-site and is free draining.

E37.6

All fill placed on-site is:

a. limited to that area required for the necessary for the approved use;
b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.

</tbody>
</table>
Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

**PO41**

Development Filling or excavation does not result in:

- adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;
- increased flood inundation outside the site;
- any reduction in the flood storage capacity in the floodway;
- and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

**PO**

Filling or excavation on the development site is undertaken in a manner which does not create or accentuate problems associated with stormwater flows and drainage systems on land adjoining the site.

| E | Filling and excavation undertaken on the development site are shaped in a manner which does not:
|---|---|
| a. | prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
| b. | redirect stormwater surface flow away from existing flow paths; or
| c. | divert stormwater surface flow onto adjacent land, (other than a road), in a manner which:
| i. | concentrates the flow; or
| ii. | increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
| iii. | causes actionable nuisance to any person, property or premises.

**Retaining walls and structures**

<table>
<thead>
<tr>
<th>PO42</th>
<th>All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.</th>
</tr>
</thead>
</table>
| E42 | Earth-retaining structures:
| a. | are not constructed of boulder rocks or timber; |
b. where height is no greater than 900mm, are provided in accordance with Figure—Retaining on a boundary:

Figure—Retaining on boundary

![](Image)

Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

---

c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;

d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal: terraced, landscaped and drained as shown below.

Figure—Cut

![](Image)

Figure—Fill
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements:

E

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/ premise’s current occupancy and use;

c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.

AND
b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO43

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E43.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. for outdoor sales (54) processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E43.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

| **E49.1** Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment: |
| a. are enclosed within buildings or structures; |
| b. are located behind the main building line; |
| c. have a similar height, bulk and scale to the surrounding fabric; |
| d. have horizontal and vertical articulation applied to all exterior walls. |

| **E49.2** |
| A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries. |

| **PO50** Infrastructure does not have an impact on pedestrian health and safety. |

| **E50** Access control arrangements: |
| a. do not create dead-ends or dark alleyways adjacent to the infrastructure; |
| b. minimise the number and width of crossovers and entry points; |
| c. provide safe vehicular access to the site; |
| d. do not utilise barbed wire or razor wire. |

| **PO51** All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility: |
| a. generates no audible sound at the site boundaries where in a residential setting; or |
| b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. |

| **E51** All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. |

| **Sales office<sup>(72)</sup>** |
| **PO52** The sales office<sup>(72)</sup> is designed to: |

| No example provided. |
a. provide functional and safe access, manoeuvring areas and car parking spaces for the number and type of vehicles anticipated to access the site;

b. complement the streetscape character while maintaining surveillance between buildings and public spaces;

c. be temporary in nature.

Note - Refer to Planning scheme policy - Integrated design for access and crossover requirements.

## Telecommunications facility

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

### PO53
Telecommunications facilities are co-located with existing telecommunications facilities, Utility installation, Major electricity infrastructure or Substation if there is already a facility in the same coverage area.

### E53.1
New telecommunication facilities are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

### E53.2
If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

### PO54
A new Telecommunications facility is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

### E54
A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

### PO55
Telecommunications facilities do not conflict with lawful existing land uses both on and adjoining the site.

### E55
The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

### PO56
The Telecommunications facility does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;

### E56.1
Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.
b. visually integrated with the surrounding area;
c. not visually dominant or intrusive;
d. located behind the main building line;
e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
f. camouflaged through the use of colours and materials which blend into the landscape;
g. treated to eliminate glare and reflectivity;
h. landscaped;
i. otherwise consistent with the amenity and character of the zone and surrounding area.

E56.2
In all other areas towers do not exceed 35m in height.

E56.3
Towers, equipment shelters and associated structures are of a design, colour and material to:

a. reduce recognition in the landscape;
b. reduce glare and reflectivity.

E56.4
All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

E56.5
The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

E56.6
A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

PO57
Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

E57
An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

PO58
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

E58
All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.
### PO59

**Community activities:**

1. are located to:
   - cluster with other non-residential activities to form a neighbourhood hub (this may include being located within or adjacent to an existing neighbourhood hub); or
   - if establishing a new neighbourhood hub (as described in the PO below); be on a main street;

2. are located on allotments that have appropriate area and dimensions for the siting of:
   - buildings and structures;
   - vehicle servicing, deliveries, parking, manoeuvring and circulation;
   - landscaping and open space including buffering;

3. are of a small scale, having regard to the surrounding character;

4. are serviced by public transport;

5. do not negatively impact adjoining residents or the streetscape.

### PO60

**Retail and commercial uses within a neighbourhood hub**

- are of a scale that provide for the convenience needs or localised services of the immediate neighbourhood and do not constitute the scale or function of a Local centre.

*Note - For the function and scale of a Local centre refer to Table 6.2.1.1 Moreton Bay centres network.*

### E60

**Retail and commercial uses within a neighbourhood hub consist of no more than:**

- 1 small format supermarket with a maximum GFA of 1200m²;
- 10 small format retail or commercial tenancies with a maximum GFA of 100m² each.

### PO61

**The expansion (into adjoining lots) of existing neighbourhood hubs or the establishment of a new neighbourhood hub must:**

1. adjoin or address a park, public open space or include privately owned civic or forecourt space having a minimum area of 400m²;

2. be located on the corner of a sub-arterial or collector road;
c. form a ‘Main street’ having a maximum length of 200m;

d. be centrally located within an 800m radial catchment;

e. be separated from other neighbourhood hubs and centres by 1600m, measured from the centre of each neighbourhood hub or centre.

**PO62**

Corner stores may establish as standalone uses where:

a. having a maximum GFA of 250m²;

b. the building adjoins the street frontage and has its main pedestrian entrance from the street frontage;

c. not within 1600m of another corner store, neighbourhood hub or centre.

**PO**

Service stations are located, designed and orientated to:

a. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;

b. be in proximity of a neighbourhood hub or centre;

c. not negatively impact active streets, public spaces or hubs of activity where the pedestrian safety and comfort is of high importance (e.g. in neighbourhood hubs and centres);

d. not result in the fragmentation of active streets (e.g. site where active uses are located on adjoining lots);

e. ensure the amenity of adjoining properties is protected;

f. reduce the visual impact of the Service station from the streetscape while maintaining surveillance from the site to the street;

g. minimise impacts on adjoining residential uses, to a level suitable relative to expected residential amenity of the area. (e.g. high order road in urban or next generation neighbourhood, likely to be noisy and not like suburban);

h. provide ancillary uses that meet the convenience needs of users.

**E**

Service stations are located:

a. adjoining or within 400m of:

i. a neighbourhood hub identified on Overlay map - Community activities and neighbourhood hubs (not on a neighbourhood hub lot), or

ii. a centre zone;

b. on the corner lot of an arterial or sub-arterial road.

**E**

Service stations are designed and orientated on site to:

a. include a landscaping strip having a minimum depth of 1m adjoining all road frontages;

b. building and structures (including fuel pump canopies) are setback a minimum of 3m from the primary and secondary frontage and a minimum of 5m from side and rear boundaries;

c. include a screen fence, of a height and standard in accordance with a noise impact assessment (Note: Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise), on side and rear boundaries where adjoining land is able to contain a residential use;
### PO63

Non-residential uses *(excluding a Service station)* address and activate streets and public spaces by:

- **a.** ensuring buildings and individual tenancies address street frontage(s), civic space and other areas of pedestrian movement;
- **b.** new buildings adjoin or are within 3m of the primary frontage(s), civic space or public open space;
- **c.** locating car parking areas **and drive through facilities** behind or under buildings to not dominate the street environment;
- **d.** establishing and maintaining interaction, pedestrian activity and casual surveillance through appropriate land uses and building design (e.g. The use of windows or glazing and avoiding blank walls with the use of sleeving);
- **e.** providing visual interest to the façade (e.g. Windows or glazing, variation in colour, materials, finishes, articulation, recesses or projections);
- **f.** establishing and maintaining human scale.

### PO64

All buildings exhibit a high standard of design and construction, which:

- **a.** add visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, cantilevered awning);
- **b.** enable differentiation between buildings;
- **c.** contribute to a safe environment;
- **d.** incorporate architectural features within the building facade at the street level to create human scale (e.g. cantilevered awning);
- **e.** include building entrances that are readily identifiable from the road frontage;
- **f.** locate and orientate to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites;
g. incorporate appropriate acoustic treatments, having regard to any adjoining residential uses;

h. facilitate casual surveillance of all public spaces.

<tr>
<td>Non-residential uses</td>
<td>Minimum 1 space per 200m2 of GFA</td>
</tr>
</tbody>
</table>

**E68.2**

Bicycle parking is:

a. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.
Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E68.3

For non-residential uses, storage lockers:

a. are provided at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E68.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/ Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>

</tr>
</tbody>
</table>
Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:
   i. a mirror located above each wash basin;
   ii. a hook and bench seating within each shower compartment;
   iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

</table>

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:</td>
<td>Development does not involve:</td>
</tr>
<tr>
<td>a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;</td>
<td>a. excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below than 5m Australian Height datum AHD; or</td>
</tr>
<tr>
<td></td>
<td>b. filling of land of more than 500m$^3$ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.</td>
</tr>
</tbody>
</table>
b. protects the environmental and ecological values and health of receiving waters;
c. protects buildings and infrastructure from the effects of acid sulfate soils.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO76
Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area

No example provided.
and a Value Offset Area is maintained and not lost or degraded;
b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

PO77
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;
b. providing contiguous patches of habitat;
c. provide replacement and rehabilitation planting to improve connectivity;
d. avoiding the creation of fragmented and isolated patches of habitat;
e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevardig, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

PO78
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No example provided.

PO79
Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;

No example provided.
### PO80

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

- providing contiguous patches of habitat;
- avoiding the creation of fragmented and isolated patches of habitat;
- providing wildlife movement infrastructure;
- providing replacement and rehabilitation planting to improve connectivity.

No example provided.

### PO81

Development does not:

- result in soil erosion or land degradation;
- leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

No example provided.

### PO82

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

- ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
- avoiding or minimising changes to landforms to maintain hydrological water flows;
- adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry and animal keeping activities.

No example provided.

### PO83

Development minimises adverse impacts of stormwater run-off on water quality by:

- minimising flow velocity to reduce erosion;
- minimising hard surface areas;
- maximising the use of permeable surfaces;
- incorporating sediment retention devices;
- minimising channelled flow.

No example provided.

6 Zones
### PO94
Demolition and removal is only considered where:

- a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
- c. limited demolition is performed in the course of repairs, maintenance or restoration; or
- d. demolition is performed following a catastrophic event which substantially destroys the building or object.

No example provided.

### PO95
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No example provided.

### PO96
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

### E96
Development does:

- a. not result in the removal of a significant tree;
- b. not occur within 20m of a protected tree;
### Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

### Secondary treated wastewater treatment systems within a Water supply buffer include:

- emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging;
- back up pump installation and backup power;
- MEDLI modelling to determine irrigation rates and sizing of irrigation areas;
- vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and
- wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities.

### Development within a Bulk water supply infrastructure buffer is located, designed and constructed to:

- protect the integrity of the water supply pipeline;
- maintain adequate access for any required maintenance or upgrading work to the water supply pipeline;
- does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer;
- involving a major hazard facility or environmentally relevant activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.

### Development is located and designed to maintain required access to Bulk water supply infrastructure.

- buildings or structures;
- gates and fences;
- storage of equipment or materials;
- landscaping or earthworks or stormwater or other infrastructure.

### Odour sensitive development is separated from landfill sites so they are not adversely affected by odour emission or other air pollutant impacts.

| b. is located and designed in a manner that maintains a high level of security of supply;  
c. is located and design so not to impede upon the functioning and maintenance of high voltage electrical infrastructure.  

**PO106**  
Development within a Pumping station buffer is located, designed and constructed to:  
a. ensure that odour or other air pollutant impacts on the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008;  
b. ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.  

**E106**  
Development does not involve the construction of any buildings or structures within a Pumping station buffer.  

**Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)**  
Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.  

**PO107**  
Development:  
a. minimises the risk to persons from overland flow;  
b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.  

No example provided.  

**PO108**  
Development:  
a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;  
b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.  

No example provided.  

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.
**PO109**

Development does not:

a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level;

b. increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.

Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.

**PO110**

Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.

**E110**

Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.

**PO111**

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

**E111**

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

**PO112**

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

**E112.1**

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

a. Urban area – Level III;

b. Rural area – N/A;

c. Industrial area – Level V;

d. Commercial area – Level V.

**E112.2**

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.
Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

**Development does not occur within:**

| a. 50m from top of bank for W1 waterway and drainage line |
| b. 30m from top of bank for W2 waterway and drainage line |
| c. 20m from top of bank for W3 waterway and drainage line |
| d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands. |
d. impact of opportunities for revegetation and rehabilitation planting;

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

e. edge effects.

Scenic amenity - Regionally significant (Hills) and Locally important (Coast) (refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)

PO116

Landscaping

a. complements the coastal landscape character and amenity;

b. has known resilience and robustness in the coastal environment;

Fences and walls:

a. do not appear visually dominant or conspicuous within its setting;

b. reduce visual appearance through the use of built form articulation, setbacks, and plant screening;

c. use materials and colours that are complementary to the coastal environment.

Building design responds to the bayside location and complements the particular bayside character and amenity by adopting and incorporating a range of architectural character elements.

Vegetation that contributes to bayside character and identity are:

a. retained;

b. protected from development diminishing their significance.

E116

Where located in the Locally Important (Coast) scenic amenity overlay:

a. landscaping comprises indigenous coastal species;

b. fences and walls are no higher than 1m; and

c. existing pine trees, palm trees, mature fig and cotton trees are retained.

d. where over 12m in height, the building design includes the following architectural character elements:

i. curving balcony edges and walls, strong vertical blades and wall planes;

ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;

iii. roof top outlooks, tensile structures as shading devices;

iv. lightweight structures use white frame elements in steel and timber, bold colour contrast.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Figure 6.2.6.3.6 - Rothwell

6 Zones
6.2.6.4 Urban neighbourhood precinct

6.2.6.4.1 Purpose - Urban neighbourhood precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Urban neighbourhood precinct:
   a. The Urban neighbourhood precinct will mainly comprise of a series of residential neighbourhoods that will each achieve a site density of at least 45 dwellings per hectare and can support the provision of local services.

   b. Development in the urban neighbourhood precinct maximises the efficient use of land through appropriate built form and land use intensity. Land is to be developed to an intensity that will capitalise on the sites proximity to services and public transport or seaside amenity aspects.

   c. Neighbourhoods will have a mix of residential uses (e.g. apartments, plexes, terrace etc), tenure and densities providing housing choice and affordability for different lifestyle choices and life stages to meet diverse community needs.

   d. The scale and density of development facilitates an efficient land use pattern that supports compact, walkable and sustainable communities that are well connected to centres, community and social infrastructure.

   e. Neighbourhoods are designed to provide well-connected, safe and convenient movement and open space networks through interconnected streets and active transport linkages that provide high levels of accessibility between residences, open space areas and places of activity.

   f. Home based business can only be established where the scale and intensity of the activity does not detrimentally impact upon the character and amenity associated with the surrounding area. Specifically, Home based business does not include the sale or restoration of more than 4 vehicles in any calendar year or, undertake a mechanical repairs or panel beating activity associated with a business at the subject premises.

   g. The design siting and construction of residential uses are to:
      i. contribute to an attractive streetscape with priority given to pedestrians;
      ii. encourage passive surveillance of public spaces;
      iii. result in privacy and residential amenity consistent with the medium to high density residential character of the area;
      iv. orientate to integrate with the street and surrounding neighbourhood;
      v. provide a diverse and attractive built form where buildings are located closer to the street and encourage active frontages;
      vi. incorporate sub-tropical urban design principles that respond to local climatic conditions;
      vii. incorporate sustainable practices including maximising energy efficiency and water conservation;
      viii. incorporate natural features and respond to site topography;
      ix. be of a scale and density consistent with the medium to high density residential character of the area;
      x. locate car parking so as not to dominate the street;
      xi. cater for appropriate car parking and manoeuvring areas on-site;
      xii. provide urban services such as reticulated water, sewerage, sealed roads, parks and other identified infrastructure.
h. Non-residential uses in the urban neighbourhood precinct take the form of community activities, **large-medium scale office activities**, corner stores, mixed use buildings or neighbourhood hubs.

i. Community activities:
   i. establish in a location that may be serviced by public transport;
   ii. do not negatively impact adjoining residents or the streetscape;
   iii. do not undermine the viability of existing or future centres.

j. Corner stores may establish as stand alone uses (not part of a neighbourhood hub) where:
   i. the store is of a scale that remains subordinate to all centres and neighbourhood hubs within the region;
   ii. clear separation from existing neighbourhood hubs and centres within the network are maintained to reduce catchment overlap. The corner store should not be within 1600m of another corner store, neighbourhood hub or centre measured from the centre of the corner store, neighbourhood hub or centre;
   iii. they are appropriately designed and located to include active frontages.

k. Mixed use buildings provide for a mix of uses that activate the precinct at different times of the day and week to create a vibrant environment and may incorporate **large-medium scale office activities** and some retail and commercial activities (not part of a neighbourhood hub or a corner store) where:
   i. forming part of a mixed use building with residential uses;
   ii. **within 800m walking distance** of high frequency public transport (e.g. train station);
   iii. the office component is of a large-medium scale providing an employment rate of at least 57 jobs per 1000m²;
   iv. retail uses are located at the ground level to service convenience needs only, they are of a small scale to complement rather than compete with centres and consist of food and drink outlet, a small convenience store, personal services, speciality stores and do not include a full-line supermarket, department store (including a discount department store) or showroom (78); and only servicing convenience needs;
   v. the activities consist of: a small convenience store, personal services, speciality stores and do not include a full-line supermarket, department store (including a discount department store) or showroom (78);
   vi. development for uses that support high dependency on cars is not accommodated;
   vii. development protects residential amenity commensurate with its location;
   viii. they are appropriately designed and located to include an active frontage.

l. New retail and commercial uses (other than a **stand-alone large-medium scale office**, corner store or mixed use building) only establish within this precinct if:
   i. within an existing or future neighbourhood hub identified in the planning scheme (e.g. Overlay map - Neighbourhood hubs and community activities); or
   ii. the urban neighbourhood precinct does not adjoin a higher order or district centre (e.g. Clontarf, Woody Point, Scarborough); or
   iii. on land adjoining or opposite a train station.
m. Retail and commercial activities (forming part of a neighbourhood hub excluding Service stations, and not for a stand-alone large-medium scale office, corner store or mixed use building):
   i. cluster with other non-residential uses forming a neighbourhood hub;
   ii. are centred around a ‘Main Street’ central core, that is adjoining or adjacent to a train station (platform entrance/exit) fostering opportunities for social and economic exchange;
   iii. are of a small scale, appropriate for a neighbourhood hub;

   Note - Retail and commercial uses that will result in a new or existing neighbourhood hub expanding to a scale and function consistent with a Local centre are to be assessed as if establishing a new Local centre. Refer to the Centre zone code for relevant assessment benchmark.

   iv. do not negatively impact adjoining residents or the streetscape;
   v. are subordinate in function and scale to all centres within the region.

n. Large-medium scale offices may establish as stand-alone uses providing local employment opportunities where within easy walking distance of high frequency public transport.

o. Service stations:
   i. establish where they will not disrupt, fragment or negatively impact active frontages (e.g. within a neighbourhood hub);
   ii. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;
   iii. establish in locations that will not have a negative impact on the street environments intended to include active frontages (e.g. Neighbourhood hubs or centres);
   iv. do not negatively impact adjoining residents or the streetscape;
   v. ancillary uses or activities only service the convenience needs of users.

p. The design, siting and construction of non-residential uses:
   i. maintains a human scale, through appropriate building heights and form;
   ii. provides attractive, active frontages that maximise pedestrian activity along road frontages, movement corridors and public spaces (excluding Service stations);
   iii. provides for active and passive surveillance of road frontages, movement corridors and public spaces;
   iv. promotes active transport options and ensures an oversupply of car parking is not provided;
   v. locates car parking so as not to dominate the street;
   vi. does not result in large internalised shopping centres (e.g. large blank external walls with tenancies only accessible from within the building) surrounded by expansive areas of surface car parking.

q. General works associated with the development achieves the following:
   i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
   ii. the development manages stormwater to:
A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
B. prevent stormwater contamination and the release of pollutants;
C. maintain or improve the structure and condition of drainage lines and riparian areas;
D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

r. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
s. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
t. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
u. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.
v. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;
B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
v. protecting native species and protecting and enhancing species habitat;
vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
x. ensuring effective and efficient disaster management response and recovery capabilities;
xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

w. Development in the Urban neighbourhood precinct includes one or more of the following:

- Bar
- Child care centre
- Club
- Community care centre
- Community residence
- Community use
- Dwelling unit
- Educational establishment
- Emergency services
- Health care services
- Home based business
- Hotel
- Multiple dwelling
- Office
- Place of worship
- Residential care facility
- Retirement facility
- Rooming accommodation
- Shop - if for a corner store or part of a mixed use building
- Short-term accommodation
- Tourist park
- Where in a Neighbourhood hub or part of a mixed use building:
  - Food and drink outlet
  - Hardware and trade supplies
  - Health care service
  - Indoor sport and recreation - for a gymnasiu
    - Office
    - Service industry
    - Shop
    - Shopping centre
    - Veterinary services
- Bar
- Child care centre
- Club
- Community care centre
- Community residence
- Community use
- Dwelling unit
- Educational establishment
- Emergency services
- Health care services
- Home based business
- Hotel
- Multiple dwelling
- Office
- Place of worship
- Residential care facility
- Retirement facility
- Rooming accommodation
- Shop - if for a corner store or part of a mixed use building
- Short-term accommodation
- Tourist park
- Where in a Neighbourhood hub or part of a mixed use building:
  - Food and drink outlet
  - Hardware and trade supplies
  - Health care service
  - Indoor sport and recreation - for a gymnasiu
    - Office
    - Service industry
    - Shop
    - Shopping centre
    - Veterinary services
- Adult store
- Agricultural supplies store
- Air services
- Animal husbandry
- Animal keeping
- Aquaculture
- Cemetery
- Crematorium
- Cropping
- Intensive animal industry
- Intensive horticulture
- Low impact industry
- Marine industry
- Medium impact industry
- Motor sport facility
- Nature-based tourism
- Nightclub entertainment facility
- Non-resident workforce accommodation
- Port services
- Renewable energy facility
- Research and technology industry
- Rural industry
- Service Station - where it is a standalone use
- Special industry
- Tourist attraction
- Transport depot
y. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

6.2.6.4.2 Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part G, Table 6.2.6.4.1. Where the development does not meet a requirement for accepted development (RAD) within Part G Table 6.2.6.4.1, the category of development changes to assessable development under the rules outlined in section 5.3.3. (1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

### Table 6.2.6.4.1 Requirements for accepted development - Urban neighbourhood precinct

**Requirements for accepted development**

<table>
<thead>
<tr>
<th>General requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Building height (Residential uses)</strong></td>
</tr>
<tr>
<td><strong>RAD1</strong> Building height:</td>
</tr>
<tr>
<td>a. is within the minimum and maximum mapped on Overlay map – Building heights; or</td>
</tr>
<tr>
<td>b. for domestic outbuildings, including free standing carports and garages, 4m and a mean height not exceeding 3.5m.</td>
</tr>
<tr>
<td><strong>Building height (Non-residential uses)</strong></td>
</tr>
<tr>
<td><strong>RAD2</strong> Building height does not exceed the maximum height identified on Overlay map - Building heights.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Setbacks (Residential uses)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>RAD3</strong> Setbacks (excluding eaves, sun shading devices, built to boundary walls) comply with Table 6.2.6.4.3 'Setbacks' - Setback (Residential uses).</td>
</tr>
<tr>
<td>Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).</td>
</tr>
<tr>
<td><strong>RAD4</strong> Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:</td>
</tr>
<tr>
<td>a. only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.6.4.4;</td>
</tr>
<tr>
<td>b. of a length and height not exceeding that specified in Table 6.2.6.4.4 'Built to boundary walls (Residential uses)';</td>
</tr>
<tr>
<td>c. setback from the side boundary:</td>
</tr>
<tr>
<td>i. not more than 20mm; or</td>
</tr>
<tr>
<td>ii. if a plan of development shows provides for only one built to boundary wall on the one boundary, not more than 450mm; or</td>
</tr>
<tr>
<td>iii. if a built to boundary wall may be built on each side of the same boundary, not more than 20mm</td>
</tr>
<tr>
<td>d. on the low side of a sloping lot.</td>
</tr>
<tr>
<td>Editor’s note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to boundary walls on adjacent lots a ‘High Density Development Easement’ is recommended; or for all other built to boundary walls a ‘easement for maintenance purposes’ is recommended.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Site cover (Residential uses)</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>RAD5</strong> Site cover (excluding patios, balconies and other unenclosed structures) does not exceed the specified percentages in the table below.</td>
</tr>
<tr>
<td><strong>Building height</strong></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>
### Requirements for accepted development

<td>25%</td>
<td>25%</td>
</tr>
</tbody>
</table>

Note - Refer to Planning scheme policy - Residential design for details and examples.

### Lighting

**RAD6**

Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.

### Clearing of habitat trees where not located in the Environmental areas overlay map

**RAD7**

Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:

a. Clearing of a habitat tree located within an approved development footprint;

b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a ‘habitat tree’. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.
### Requirements for accepted development

#### Works requirements

#### Utilities

<table>
<thead>
<tr>
<th>RAD8</th>
<th>Where available, the development is connected to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. an existing reticulated electricity supply;</td>
</tr>
<tr>
<td></td>
<td>b. telecommunications and broadband;</td>
</tr>
<tr>
<td></td>
<td>c. reticulated sewerage;</td>
</tr>
<tr>
<td></td>
<td>d. reticulated water;</td>
</tr>
<tr>
<td></td>
<td>e. sealed and dedicated road;</td>
</tr>
</tbody>
</table>

Development is provided with an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).

| RAD9 | Where involving an extension (building work) in front of the main building line and where the lot adjoins or is opposite to a park**, foreshore or Humpybong Reserve, all existing overhead power lines are to be undergrounded for the full frontage of the lot. |

### Access

<table>
<thead>
<tr>
<th>RAD</th>
<th>The frontage road is fully constructed to Council’s standards.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Note - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.</td>
</tr>
<tr>
<td></td>
<td>Note - Frontage roads include streets where no direct lot access is provided.</td>
</tr>
</tbody>
</table>

| RAD10 | Any new or changes to existing direct vehicle access for residential development does not occur from arterial or sub-arterial roads. |

<table>
<thead>
<tr>
<th>RAD11</th>
<th>Any new or changes to existing siteeees crossovers and driveways are designed, and located and constructed in accordance with:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. where for a Council-controlled road and associated with a Dwelling house:</td>
</tr>
<tr>
<td></td>
<td>i. Planning scheme policy - Integrated design;</td>
</tr>
<tr>
<td></td>
<td>b. where for a Council-controlled road and not associated with a Dwelling house:</td>
</tr>
<tr>
<td></td>
<td>i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;</td>
</tr>
<tr>
<td></td>
<td>ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;</td>
</tr>
</tbody>
</table>
iii. Planning scheme policy - Integrated design;

iv. Schedule 8 - Service vehicle requirements;

c. where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

a. is for urban purposes only;

b. involves a land area greater than 2500m²;

c. will result in 6 or more dwellings;

OR

c. will result in an impervious area greater than 25% of the net developable area.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and

b. that results in 6 or more dwellings; or

b. that result in an impervious area greater than 25% of the net developable area;

incorporates a ‘deemed to comply solution’ to manage stormwater quality.

Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design ‘Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland’ and Planning scheme policy – Integrated design.
Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with</td>
<td>4.0m</td>
</tr>
<tr>
<td>Sewer pipe up to 225mm diameter</td>
<td></td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits.</td>
</tr>
</tbody>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning scheme policy - Integrated design (Appendix C) for easement requirements over open channels.

Site works and construction management

RAD15 The site and any existing structures are to be maintained in a tidy and safe condition.

RAD16 Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines. Planning scheme policy—Stormwater management and Planning scheme policy—Integrated design.

Development does not cause erosion or allow sediment to leave the site.

Note - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation.

RAD No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.
**Rad** | Existing street trees are protected and not damaged during works.
---|---
| Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented.

**Rad19** | Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.

**Rad17** | Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**Rad20** | Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

**Rad18** | All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.
---|---
| Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works

**Rad** | Disposal of materials is managed in one or more of the following ways:
---|---
| a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or
| b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.
---|---
| Note - No burning of cleared vegetation is permitted.
| Note - The chipped vegetation must be stored in an approved location.

**Rad** | All development works are carried out within the following times:
---|---
| a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;
| b. no work is to be carried out on Sundays or public holidays.

**Earthworks**

**Rad22** | The total of all cut and fill on site does not exceed 900mm in height.
Note—This is site earthworks not building work.

Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

RAD

Cut and fill batters, (other than batters to dams and water impoundments), have a finished slope no steeper than the following:
<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **a.** | any cut batter is no steeper than 1V in 4H;  
  **b.** | any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;  
  **c.** | any compacted fill batter is no steeper than 1V in 4H; |

**RAD** All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**RAD** Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

*Note - Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.*

**RAD** All fill and excavation is contained on-site and is free draining.

**RAD** Earthworks undertaken on the development site are shaped in a manner which does not:

**a.** prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or  
  **b.** redirect stormwater surface flow away from existing flow paths; or  
  **c.** divert stormwater surface flow onto adjacent land (other than a road) in a manner which:

  **i.** concentrates the flow; or  
  **ii.** increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or  
  **iii.** causes actionable nuisance to any person, property or premises.

**RAD** All fill placed on-site is:

**a.** limited to that necessary for the approved use;  
  **b.** clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.

**RAD21** The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

*Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures*

**RAD** No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

*Note - Public sector entity is defined in Schedule 2 of the Act.*

**RAD23** Filling or excavation that would result in any of the following is not carried out on site: does not result in:

**a.** reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Schedule 2 of the Act.

### Fire services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

### RAD24

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. - for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities; and

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.
A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

   i. the overall layout of the development (to scale);

   ii. internal road names (where used);

   iii. all communal facilities (where provided);

   iv. the reception area and on-site manager’s office (where provided);

   v. external hydrants and hydrant booster points;

   vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

a. in a form;

b. of a size;

c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific requirements

Home based business(35)

RAD29 Home based business(s)(35) are fully enclosed within the existing dwelling or on-site structure.

RAD30 A maximum of 1 employee (not a resident) OR 2 customers OR customers from within 1 Small rigid vehicle (SRV) or smaller are permitted on the site at any one time.
| RAD31 | Service and delivery vehicles do not exceed one Small rigid vehicle (SRV) at any one time. |
| RAD32 | Vehicle parking for the Home based business\(^{(35)}\) on-site is limited to 1 car or Small rigid vehicle (SRV). |
| RAD33 | Home based business(s)\(^{(35)}\) occupy an area of the existing dwelling or on-site structure not greater than 40m\(^2\) gross floor area. |
| RAD34 | Home based business(s)\(^{(35)}\) do not involve manufacturing.  
Note: Manufacturing as defined in the Food Act 2006 is permitted. Food businesses that are licensable by local government and only involve the manufacturing of non-potentially hazardous food are permitted. Definitions in the Food Act 2006 apply to this note. |
| RAD35 | The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances. |
| RAD36 | The hours of operation do not exceed 8:00am to 6:00pm, Monday to Saturday and are not open to the public on Sunday's, Christmas Day, Good Friday and Anzac Day.  
Note: Office or administrative activities that do not generate non-residents visiting the site, such as book-keeping and computer work, may operate outside the hours of operation. |
| RAD37 | For a bed and breakfast, the use:  
a. is fully contained within the existing dwelling on-site;  
b. occupies a maximum of 2 bedrooms;  
c. includes the provision of a minimum of one (1) meal per day.  
Note: For a Bed and Breakfast SO29 - SO36 above do not apply. |

**Sales office\(^{(72)}\)**

| RAD38 | Car parking spaces are provided in accordance with Table 6.2.6.4.5 ‘Car parking spaces’. |
| RAD39 | Car parking and manoeuvring areas are designed and constructed in accordance with the Australian Standards AS2890.1. |
| RAD40 | Sales office\(^{(72)}\) has direct vehicular access to a dedicated road constructed in accordance with Planning scheme policy - Integrated design. |
| RAD41 | Fencing adjoining a street (other than a laneway) or public open space does not exceed 1.2 metres in height. |
| RAD42 | 30% of the front façade of the building (excluding the garage and front door) is made up of windows/glazing. |
| RAD43 | The Sales office\(^{(72)}\) has a clearly identifiable pedestrian entry that is visible and accessible from the primary frontage. |
| RAD44 | The use of the premises for a Sales office\(^{(72)}\) is for a maximum of 2 years after the commencement of the use. |

**Telecommunications facility\(^{(81)}\)**
Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

| RAD45 | A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility. |
| RAD46 | The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval. |
| RAD47 | Equipment shelters and associated structures are located:  
   a. directly beside the existing equipment shelter and associated structures;  
   b. behind the main building line;  
   c. further away from the frontage than the existing equipment shelter and associated structures;  
   d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. |
| RAD48 | Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality. |
| RAD49 | The facility is enclosed by security fencing or by other means to ensure public access is prohibited. |
| RAD50 | A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.  
   Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.  
   Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design. |
| RAD51 | All equipment comprising the telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary. |

**Retail, commercial and community uses**

| RAD52 | Where involving an extension (building work) in the front setback a minimum of 50% of the front facade of the building is made up of windows or glazing between a height of 1m and 2m. The minimum window/glazing is to remain uncovered and free of signage. Any tinting, signage or vinyl wrap applied to a glazed facade located at ground floor level is to maintain visibility of the internal activity from the street and not obscure surveillance of the street. |
**Figure - Glazing**

| RAD53 | Development does not result in a reduction in the number or standard of car parking spaces provided on the site except where a reduction is required for the provision of cycle parking. |
| RAD54 | Where additional car parking spaces are provided they are not located between the frontage and the main building line. |
| RAD55 | Where involving an extension (building work), bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste. |
| RAD56 | Where involving an extension (building work) does not result in a reduction in the amount or standard of established landscaping on-site. |
| RAD57 | Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of *Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.*  
  
  Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day. |
| RAD58 | Hours of operation do not exceed 6:00am to 9:00pm Monday to Sunday. |
| RAD | Development does not involve a drive through facility. |

**Values and constraints requirements**

Note - The relevant values and constraints requirements do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)**

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m$^2$ and 500m$^2$ respectively.

| RAD59 | Development does not involve: |
Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.
Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house or extension to an existing dwelling house only on lots less than 750m².

Editor's note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor's note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;
ii. be the least valued area of koala habitat on the site;
iii. minimise the footprint of the development envelope area;
iv. minimise edge effects to areas external to the development envelope;
v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;
vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

The following uses are not located within the 100m wide transport route buffer:

a. Caretaker’s accommodation, except where located in the Extractive industry zone;
b. Community residence;
c. Dual occupancy;
d. Dwelling house;
e. Dwelling unit;
f. Hospital;
g. Rooming accommodation;
h. Multiple dwelling;
i. Non-resident workforce accommodation

j. Relocatable home park

k. Residential care facility

l. Resort complex

m. Retirement facility

n. Rural workers’ accommodation

o. Short-term accommodation

p. Tourist park

Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

Development is for the preservation, maintenance, repair and restoration of the site, object or building. This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan. This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;
b. laying of overhead or underground services;
c. any sealing, paving, soil compaction;
d. any alteration of more than 75mm to the ground surface level prior to work commencing.

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following requirements apply)
| RAD70 | Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor. |
| RAD71 | Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures. |
| RAD72 | Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):  
  a. buildings or structures;  
  b. gates and fences;  
  c. storage of equipment or materials;  
  d. landscaping or earthworks or stormwater or other infrastructure. |
| RAD73 | On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected. |
| RAD74 | On-site sewerage facilities in a Water supply buffer for a dwelling house include:  
  a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time;  
  b. a reserve land application area of 100% of the effluent irrigation design area;  
  c. land application areas that are vegetated;  
  d. the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area);  
  e. wastewater collection and storage systems must have capacity to accommodate full load at peak times. |
| RAD75 | On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging. |
| RAD76 | Development involving Permanent plantation within a Water supply buffer maintains a minimum of 30% ground cover at all times. |
| RAD77 | Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer. |
| RAD78 | Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer. |
| RAD79 | All habitable rooms located within an Electricity supply substation buffer are:  
  a. located a minimum of 10m from an electricity supply substation; and  
  b. acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008. |

**Overland flow path (refer Overlay map - Overland flow path to determine if the following requirements apply)**

| RAD80 | Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area. |
| RAD81 | Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.  
  
  **Note** - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.
### Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

<table>
<thead>
<tr>
<th>RAD82</th>
<th>Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD83</td>
<td>Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.</td>

<tr>
<td></td>
<td>c. 20m from top of bank for W3 waterway and drainage line</td>
</tr>
<tr>
<td></td>
<td>d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.</td>
</tr>
</tbody>
</table>

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

### Scenic amenity - Regionally significant (Hills) and Locally important (Coast) - (refer Overlay map - Scenic amenity to determine if the following requirements apply)

<table>
<thead>
<tr>

<td>a. landscaping comprises indigenous coastal species;</td>
</tr>
<tr>
<td></td>
<td>b. fences and walls facing the coast are no higher than 1m. Where fences and walls are higher than 1m, they have 50% transparency. This does not apply to a fence or wall at an angle of 90o to the coast;</td>
</tr>
<tr>
<td></td>
<td>c. where over 12m in height, the building design includes the following architectural character elements:</td>
</tr>
<tr>
<td></td>
<td>i. curving balcony edges and walls, strong vertical blades and wall planes;</td>
</tr>
</tbody>
</table>
ii. balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;

iii. Rooftop outlooks, tensile structure as shading devices; and

iv. lightweight structures use white frame elements in steel and timber, bold colour contrast.

d. existing pine trees, palm trees, mature fig and cotton trees are retained.

Note - A list of appropriate indigenous coastal species is identified in Planning scheme policy - Integrated design.

Transport noise corridors (refer Overlay map - Transport noise corridors)

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part H—Criteria for assessable development - Urban neighbourhood precinct

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part H, Table 6.2.6.4.2 as well as the purpose statement and overall outcomes of this code.
Where development is categorised as assessable development - impact assessable, the assessment benchmarks become the whole of the planning scheme.

<tr>
<td><strong>Building height (Residential uses)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>PO3</strong> Buildings and structures have a height that:</td>
<td><strong>E3</strong> Building height:</td>
</tr>
</tbody>
</table>
a. is of a bulk scale that is consistent with the medium to high rise character of the Urban neighbourhood precinct;

Note - There are circumstances where the Urban neighbourhood precinct is intended to have a low rise character. These circumstances are identified as having a maximum building height less than 21m on Overlay map - Building heights. Alternatives are to be considered in relation to the intended low rise character for that specific area;

b. responds to the topographic features of the site, including slope and orientation;

c. is not visually dominant or overbearing with respect to the streetscape, street conditions (e.g. street width) or adjoining properties;

d. positively contributes to the intended built form of the surrounding area;

Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height, setbacks, site cover, building bulk and mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution;

e. responds to the height of development on adjoining land where contained within another precinct or zone.

Note - Refer to Planning scheme policy - Residential design for details and examples.

Building height (Non-residential uses)

PO4
The height of non-residential buildings does not adversely affect amenity of the area or of adjoining properties and positively contributes to the intended built form of the surrounding area.

Note - To demonstrate compliance with the above a visual impact assessment may be required in accordance with Planning scheme policy - Residential design. Visual impact assessments will require the consideration of all built form matters (e.g. height, setbacks, site cover, building bulk and mass, articulation, roof form and other design aspects) from a variety of perspectives to ascertain if the proposal will result in a positive contribution;

E4
Building height does not exceed the maximum height identified on Overlay map - Building heights except for architectural features associated with religious expression on Place of worship (60) and Educational establishment (24) buildings.

Setbacks (Residential uses)

PO5
Residential buildings and structures are setback to:

E5.1
Setbacks (excluding built to boundary walls) comply with Table 6.2.6.4.3 'Setbacks' - Setback (Residential uses).
a. be consistent with medium to high density Urban neighbourhood precinct character where buildings are positioned close to the footpath to create active frontages;

b. result in development not being visually dominant or overbearing with respect to the streetscape and the adjoining sites;

c. maintain private open space areas that are of a size and dimension to be usable and functional;

de. maintain the privacy of adjoining properties;

d. ensure parked vehicles do not restrict pedestrian and traffic movement and safety;

e. limit the length, height and openings of boundary walls to maximise privacy and amenity on adjoining properties;

f. ensure built to boundary walls do not create unusable or inaccessible spaces and do not negatively impact the streetscape character, amenity or functionality of adjoining properties;

h. provide adequate separation to particular infrastructure and water bodies to minimise adverse impacts on people, property, water quality and infrastructure.

Note - Greater setbacks may be required if the lot adjoins an environmental corridor or area (Refer to values and constraints for details).

<table>
<thead>
<tr>
<th>E5.2</th>
<th>Buildings (excluding class 10 buildings and structures) ensure that built to boundary walls are:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>only established on lots having a primary frontage of 18m or less and where permitted in Table 6.2.6.4.4;</td>
</tr>
<tr>
<td>b.</td>
<td>of a length and height not exceeding that specified in Table 6.2.6.4.4 'Built to boundary walls (Residential uses)';</td>
</tr>
<tr>
<td>c.</td>
<td>setback from the side boundary:</td>
</tr>
<tr>
<td>0.</td>
<td>not more than 20mm; or</td>
</tr>
<tr>
<td>i.</td>
<td>if a plan of development shows provides for only one built to boundary wall on the one boundary, not more than 450 200mm; or</td>
</tr>
<tr>
<td>ii.</td>
<td>if a built to boundary wall may be built on each side of the same boundary, not more than 20mm</td>
</tr>
<tr>
<td>d.</td>
<td>on the low side of a sloping lot.</td>
</tr>
</tbody>
</table>

d. on the low side of a sloping lot.

Editor's note - Lots containing built to boundary walls should also include an appropriate easement to facilitate the maintenance of any wall within 600mm of a boundary. For boundaries with built to boundary walls on adjacent lots a ‘High Density Development Easement’ is recommended; or for all other built to boundary walls a ‘easement for maintenance purposes’ is recommended.

<table>

</tr>
</tbody>
</table>

| **E6.2** |
| For the secondary frontage, setbacks are consistent with adjoining buildings. |

| **PO7** |
| No example provided. |
Side and rear setbacks cater for driveway(s), services, utilities and buffers required to protect the amenity of adjoining sensitive land uses and the development will not be visually dominant or overbearing with respect to adjoining properties.

### Site cover (residential uses)

**PO8**

Residential buildings and structures will ensure that site cover:

- does not result in a site density that is inconsistent with the character of the area;
- does not result in an over development of the site;
- does not result in other elements of the site being compromised (e.g. Setbacks, open space etc);
- ensures that buildings and structures reflect the attached medium to high density urban character.

Note - Refer to Planning scheme policy - Residential design for details and examples.

**E8**

Site cover (excluding eaves, sun shading devices, patios, balconies and other unenclosed structures) does not exceed the specified percentages in the table below.

<table>
<thead>
<tr>
<th>Lot Size</th>

</tr>
</tbody>
</table>

Note - Refer to Planning scheme policy - Residential design for details and examples.

### Movement network

**PO9**

Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

**E9.1**

Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design:

- 'Figure 6.2.6.4.6 - Dakabin' – Dakabin;
- 'Figure 6.2.6.4.7 - Kallangur' – Kallangur;
- 'Figure 6.2.6.4.8 - Mango Hill' – Mango Hill;
- 'Figure 6.2.6.4.9 - Mango Hill East' – Mango Hill East;
- 'Figure 6.2.6.4.10 - Murrumba Downs' – Murrumba Downs;
- 'Figure 6.2.6.4.11 - Narangba east' – Narangba;
- 'Figure 6.2.6.4.12 - Petrie' – Petrie.
| E9.2 | **All other areas:** For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.  
Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the performance outcome. |

<table>
<thead>
<tr>
<th>Water sensitive urban design</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO10</strong></td>
</tr>
</tbody>
</table>
Best practice Water Sensitive Urban Design (WSUD) is incorporated within development sites adjoining street frontages to mitigate impacts of stormwater run-off in accordance with Planning scheme policy - Integrated design.  
No example provided. |

<table>
<thead>
<tr>
<th>Setbacks to sensitive land uses</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO11</strong></td>
</tr>
</tbody>
</table>
Sensitive land uses within 250m of land in the Industry zone - General industry precinct must mitigate any potential exposure to industrial air, noise or odour emissions that impact on human health, amenity and wellbeing.  
Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy – Noise.  
Development is designed and operated to ensure that:  
a. it meets the criteria outlined in the Planning Scheme Policy - Noise; and  
b. the air quality objectives in the *Environmental Protection (Air) Policy 2008*, are met. |

<table>
<thead>
<tr>
<th>Amenity</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO12</strong></td>
</tr>
</tbody>
</table>
The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.  
No example provided. |

<table>
<thead>
<tr>
<th>Noise</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO13</strong></td>
</tr>
</tbody>
</table>
Noise generating uses do not adversely affect existing or potential noise sensitive uses.  
Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.  
Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.  
No example provided. |

| PO14 | **E14.1** |
Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);

b. maintaining the amenity of the streetscape.

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

**E14.2**

Noise attenuation structures (e.g. walls, barriers or fences):

a. are not visible from an adjoining road or public area unless:
   
i. adjoining a motorway or rail line; or
   
ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.

b. do not remove existing or prevent future active transport routes or connections to the street network;

c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Adjoining a motorway or rail line may result in a lower noise impact assessment requirement.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

Clearing of habitat trees where not located within the Environmental areas overlay map

<table>

<tr>
<td>a. <em>where for a Council-controlled road and associated with a Dwelling house:</em></td>
</tr>
<tr>
<td>i. Planning scheme policy - Integrated design;</td>
</tr>
</tbody>
</table>
b. Where for a Council-controlled road and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3: Parking facilities Part 1: Off street car parking;
   ii. AS 2890.2: Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

E25.2

Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. AS/NZS2890.1 Parking Facilities Part 1: Off street car parking;

b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities;

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

E25.3

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.
Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor’s Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.

PO
Roads which provide access to the site from an arterial or sub-arterial road remain trafficable during major storm events without flooding or impacting upon residential properties or other premises.

E
Access roads to the development have sufficient longitudinal and cross drainage to remain safely trafficable during major storm (1% AEP) events.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - Refer to QUDM for requirements regarding trafficability.

Street design and layout

PO
Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:

a. access to premises by providing convenient vehicular movement for residents between their homes and the major road network;

b. safe and convenient pedestrian and cycle movement;

c. adequate on street parking;

d. stormwater drainage paths and treatment facilities;

e. efficient public transport routes;

f. utility services location;

g. emergency access and waste collection;

h. setting and approach (streetscape, landscaping and street furniture) for adjoining residences;

No example provided

E
Culverts and causeways do not increase inundation levels or increase velocities, for all events up to the defined flood event, to upstream or downstream properties.
i. expected traffic speeds and volumes; and

j. wildlife movement.

Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.

**EPO26**

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;

b. ensure the orderly and efficient continuation of the active transport network;

c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widenings and underground drainage where required; or,

ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

The active transport network is extended in accordance with Planning scheme policy - Integrated design.

Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.
Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m2 Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies,
- Showroom, Shop or Shopping centre greater than 1,000m2 GFA;
- Warehouses and Industry greater than 6000m2 GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissects or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

PO

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

E

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.
Intersection spacing (centreline – centreline) along a through road conforms with the following:

**a. Where the through road provides an access or residential street function:**
   - i. intersecting road located on same side = 60 metres; or
   - ii. intersecting road located on opposite side = 40 metres.

**b. Where the through road provides a local collector or district collector function:**
   - i. intersecting road located on same side = 100 metres; or
   - ii. intersecting road located on opposite side = 60 metres.

**c. Where the through road provides a sub-arterial function:**
   - i. intersecting road located on same side = 250 metres; or
   - ii. intersecting road located on opposite side = 100 metres.

**d. Where the through road provides an arterial function:**
   - i. intersecting road located on same side = 350 metres; or
   - ii. intersecting road located on opposite side = 150 metres.

**e. Walkable block perimeter does not exceed:**
   - i. 600 metres in the Coastal communities precinct and Suburban neighbourhood precinct;
   - ii. 500 metres in the Next generation neighbourhood precinct;
   - iii. 400 metres in the Urban neighbourhood precinct.

*Note:* Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (ie. left in/left out only) at intersections with sub-arterial roads or arterial roads.

*Note:* The road network is mapped on Overlay map - Road hierarchy.
### PO

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.

<table>

<td></td>
</tr>
</tbody>
</table>

Note: Major roads are sub-arterial roads and arterial roads. Minor roads are roads that are not major roads.

Note - Construction includes all associated works (services, street lighting and linemarking).

Note - Alignment within road reserves is to be agreed with Council.

Note - *Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

### Stormwater

Note: An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO.

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

Note - Roads are considered to be constructed in accordance with Council’s standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - Construction includes all associated works (services, street lighting and linemarking).

Note - Alignment within road reserves is to be agreed with Council.

</table>

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and
b. results in 6 or more dwellings; or

c. results in an impervious area greater than 25% of the net developable area,

Stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.

Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be designed in accordance with Planning scheme policy - Integrated Design (Appendix C).

PO30

Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;
b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

Stormwater drainage pipes and structures through or within private land (including inter-allotment drainage) are protected by easements in favour of Council with sufficient area for practical access for maintenance purposes.

Note - In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council’s stormwater drainage system.

E

No example provided.

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land (including inter-allotment drainage) is protected by easements in favour of Council. Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
</tbody>
</table>
| Stormwater pipe greater than 825mm diameter        | Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning Scheme Policy - Integrated Design (Appendix C) for easement requirements over open channels.

PO

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

No example provided.
### PO

**Council is provided with accurate representations of the completed stormwater management works within residential developments.**

### E

"As Built" drawings and specifications of the stormwater management devices certified by an RPEQ is provided.

**Note - Documentation is to include:**

- photographic evidence and inspection date of the installation of approved underdrainage;
- copy of the bioretention filter media delivery docket/quality certificates confirming the materials comply with specifications in the approved Stormwater Management Plan;
- date of the final inspection;

### Site works and construction management

#### PO31

The site and any existing structures are maintained in a tidy and safe condition.

#### PO32

All works on-site are managed to:

a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;

b. minimise as far as possible, impacts on the natural environment;

c. ensure stormwater discharge is managed in a manner that does not cause actionable nuisance or annoyance to any person or premises;

d. avoid adverse impacts on street trees and their critical root zone.

#### E32.1

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash removal devices designed in accordance with the Urban Stormwater Quality Planning Guidelines, State Planning Policy, Schedule 10 - Stormwater management design objectives, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;

b. stormwater discharged to adjoining and downstream properties does not cause scour or erosion of any kind;

c. stormwater discharge rates do not exceed pre-existing conditions;

d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and

e. the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins;

f. minimum design storm for all temporary diversion drains and sedimentation basins in accordance with Schedule 10 - Stormwater management design objectives;

g. ponding or concentration of stormwater does not occur in adjoining properties;
| E32.2 | Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.  
Note - The measures are adjusted on-site to maximise their effectiveness. |
| E32.3 | The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property. |
| E32.4 | Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.  
**Existing street trees are protected and not damaged during works.**  
Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented. |
| PO33 | Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts. |
| E33 | No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works. |
| PO34 | All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.  
Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.  
Note - A Traffic Management Plan may be required to demonstrate compliance with this PO. A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD). |
| E34.1 | Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. |
| E34.2 | All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. |
Note - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less, and:

- the aggregate volume of imported or exported material is greater than 1000m$^3$; or
- the aggregate volume of imported or exported material is greater than 200m$^3$ per day; or
- the proposed haulage route involves a vulnerable land use or shopping centre.

Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.

Editor's note - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

**E34.3**

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

**E**

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Note - A dilapidation report may be required to demonstrate compliance with this E.

**E**

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

**E**

Access to the development site is obtained via an existing lawful access point.

PO35

All disturbed areas are to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

E35

At completion of construction all disturbed areas of the site are to be:

- topsoiled with a minimum compacted thickness of fifty (50) millimetres;
- grassed stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.
| PO | Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.  
  Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C). |

| PO36 | The clearing of vegetation on-site:  
ah. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and  
b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;  
c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.  
  Note - No burning of cleared vegetation is permitted. |
| E36.1 | All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.  
  Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works. |
| E36.2 | Disposal of materials is managed in one or more of the following ways:  
ah. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or  
b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.  
  Note - The chipped vegetation must be stored in an approved location, preferably a park or public land. |
| PO | All development works are carried out at times which minimise noise impacts to residents:  
a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;  
b. no work is to be carried out on Sundays or public holidays.  
  Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties. |

<td>Earth retaining structures:</td>
</tr>
</tbody>
</table>
All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

- a. are not constructed of boulder rocks or timber;
- b. where height is no greater than 900mm, are provided in accordance with Figure—Retaining on a boundary;

![Figure—Retaining on boundary](image1)

- c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;
- d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical; 1.5m horizontal; terraced, landscaped and drained as shown below:

![Figure—Cut](image2)

![Figure—Fill](image3)
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;

c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND
b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO44

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;
b. is appropriate for the size, shape and topography of the development and its surrounds;
c. is compatible with the operational equipment available to the fire fighting entity for the area;
d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
e. considers the fire hazard inherent in the surrounds to the development site;
f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E44.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 3.2.2.1, with the exception that for Tourist parks (64) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;
   d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E44.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

E44.3
On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment*.

**PO45**

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

**E45**

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

   i. the overall layout of the development (to scale);

   ii. internal road names (where used);

   iii. all communal facilities (where provided);

   iv. the reception area and on-site manager’s office (where provided);

   v. external hydrants and hydrant booster points;

   vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

a. in a form;

b. of a size;

c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

**PO46**

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

**E46**

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

| Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment: |
| a. are enclosed within buildings or structures; |
| b. are located behind the main building line; |
| c. have a similar height, bulk and scale to the surrounding fabric; |
| d. have horizontal and vertical articulation applied to all exterior walls. |
| **E48.2** |
| A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries. |

| **PO49** |
| Infrastructure does not have an impact on pedestrian health and safety. |
| **E49** |
| Access control arrangements: |
| a. do not create dead-ends or dark alleyways adjacent to the infrastructure; |
### PO50

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

- a. generates no audible sound at the site boundaries where in a residential setting; or
- b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

### E50

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

### Sales office

#### PO51

The Sales office is designed to:

- a. provide functional and safe access, manoeuvring areas and car parking spaces for the number and type of vehicles anticipated to access the site;
- b. complement the streetscape character while maintaining surveillance between buildings and public spaces;
- c. be temporary in nature.

Note - Refer to Planning scheme policy - Residential design for access and crossover requirements.

### Telecommunications facility

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

#### PO52

Telecommunications facilities are co-located with existing telecommunications facilities, Utility installation, Major electricity infrastructure or Substation if there is already a facility in the same coverage area.

#### E52.1

New telecommunication facilities are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

#### E52.2

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

### PO53

#### E53

...
A new Telecommunications facility\(^{(81)}\) is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

A minimum area of 45m\(^2\) is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

<table>
<thead>
<tr>
<th>PO54</th>
<th>E54</th>
</tr>
</thead>
<tbody>
<tr>
<td>Telecommunications facilities(^{(81)}) do not conflict with lawful existing land uses both on and adjoining the site.</td>
<td>The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>PO55</th>
<th>E55.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Telecommunications facility(^{(81)}) does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; c. not visually dominant or intrusive; d. located behind the main building line; e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures; f. camouflaged through the use of colours and materials which blend into the landscape; g. treated to eliminate glare and reflectivity; h. landscaped; i. otherwise consistent with the amenity and character of the zone and surrounding area.</td>
<td>Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.</td>
</tr>
</tbody>
</table>

| E55.2 | |
| In all other areas towers do not exceed 35m in height. |

| E55.3 | |
| Towers, equipment shelters and associated structures are of a design, colour and material to: a. reduce recognition in the landscape; b. reduce glare and reflectivity. |

| E55.4 | |
| All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. Where there is no established building line the facility is located at the rear of the site. |

| E55.5 | |
| The facility is enclosed by security fencing or by other means to ensure public access is prohibited. |

| E55.6 | |
| A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design. |

[^81]: Footnote or reference regarding equipment.
### PO59
Retail and commercial activities do not establish in this precinct unless:

- a. forming part of a
  - existing or new neighbourhood hub on a site identified on Overlay map - Community activities and neighbourhood hubs; or
- b. separated from other neighbourhood hubs and centres by 1600m, measured from the centre of each neighbourhood hub or centre; or
- c. forming a new neighbourhood hub where the urban neighbourhood precinct does not adjoin a higher order or district centre (e.g. Clontarf, Woody Point, Scarborough) or where adjoining or opposite a train station; or
- d. forming part of a mixed-use building with residential uses; or
- e. for a corner store.

No example provided.

### PO60
Retail and commercial uses may establish as standalone uses (not part of a neighbourhood hub) where:

- a. for a corner store or forming part of a mixed-use building;
- b. having a maximum GFA of 250m²;
- c. the building adjoins the street frontage and has its main pedestrian entrance from the street frontage.

No example provided.

### PO
A corner store (shop) may establish as a standalone use (not part of a neighbourhood hub) where:

- a. having a maximum GFA of 250m²;
- b. the use is located on the ground floor and the building adjoins the street frontage and has its main pedestrian entrance from the street frontage.

No example provided.

### PO
A mixed use building may establish as a standalone use (not part of a neighbourhood hub) where:

Retail and commercial uses:

- a. have a total combined GFA of 1000m² or less; or, where for an Office have a total combined GFA of 1000m² or more;
- b. are on a lot within 800m walking distance of a train station;

No example provided.
c. located on the ground floor and the building adjoins the street frontage and has its main pedestrian entrance from the street frontage.

**PO**

An Office may establish as a standalone use (not part of a neighbourhood hub or mixed use building) where:

a. a GFA of 2000m² or more;
b. on a lot within 800m walking distance of a train station.

**PO**

Service stations are located, designed and orientated to:

a. establish on heavily trafficked roads where the amenity of surrounding residential uses is already subject to impacts by road vehicle noise;
b. be in proximity of a neighbourhood hub or centre;
c. not negatively impact active streets, public spaces or hubs of activity where the pedestrian safety and comfort is of high importance (e.g. in neighbourhood hubs and centres);
d. not result in the fragmentation of active streets (e.g. site where active uses are located on adjoining lots);
e. ensure the amenity of adjoining properties is protected;
f. reduce the visual impact of the Service station from the streetscape while maintaining surveillance from the site to the street;
g. minimise impacts on adjoining residential uses, to a level suitable relative to expected residential amenity of the area. (e.g. high order road in urban or next generation neighbourhood, likely to be noisy and not like suburban);
h. provide ancillary uses that meet the convenience needs of users;

**E**

Service stations are located:

a. adjoining or within 400m of:
   i. a neighbourhood hub identified on Overlay map - Community activities and neighbourhood hubs (not on a neighbourhood hub lot), or
   ii. a centre zone;
   b. on the corner lot of an arterial or sub-arterial road.

**E**

Service stations are designed and orientated on site to:

a. include a landscaping strip having a minimum depth of 1m adjoining all road frontages;
b. building and structures (including fuel pump canopies) are setback a minimum of 3m from the primary and secondary frontage and a minimum of 5m from side and rear boundaries;
c. include a screen fence, of a height and standard in accordance with a noise impact assessment (Note - Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise), on side and rear boundaries where adjoining land is able to contain a residential use;
d. not include more than 2 driveway crossovers.

**PO61**

Retail and commercial uses within a neighbourhood hub are of a scale that provide for the convenience needs of localised services of the immediate neighbourhood and do not constitute the scale or function of a Local centre.

**E61**

Retail and commercial uses within a neighbourhood hub consist of no more than:
### PO62
Non-residential uses (excluding a Service station) address and activate streets and public spaces by:

| a. ensuring buildings and individual tenancies address street frontage(s), civic space and other areas of pedestrian movement; |
| b. new buildings adjoin or are within 3m of the primary street frontage(s), civic space or public open space; |
| c. locating car parking areas and drive through facilities behind or under buildings to not dominate the street environment; |
| d. establishing and maintaining interaction, pedestrian activity and casual surveillance through appropriate land uses and building design (e.g. The use of windows or glazing and avoiding blank walls with the use of sleeving); |
| e. providing visual interest to the façade (e.g. Windows or glazing, variation in colour, materials, finishes, articulation, recesses or projections); |
| f. establishing and maintaining human scale. |

No example provided.

### PO63
All buildings exhibit a high standard of design and construction, which:

| a. add visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, cantilevered awning); |
| b. enable differentiation between buildings; |
| c. contribute to a safe environment; |
| d. incorporate architectural features within the building facade at the street level to create human scale (e.g. cantilevered awning); |
| e. include building entrances that are readily identifiable from the road frontage; |
| f. locate and orientate to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites; |

No example provided.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>g.</td>
<td>incorporate appropriate acoustic treatments, having regard to any adjoining residential uses;</td>
</tr>
<tr>
<td>h.</td>
<td>facilitate casual surveillance of all public spaces.</td>
</tr>
</tbody>
</table>

**PO64**

Development provides functional and integrated car parking and vehicle access, that:

a. prioritises the movement and safety of pedestrians between the street frontage and the entrance to the building;

b. provides safety and security of people and property at all times;

c. does not impede **active frontage and** active transport options;

d. does not impact on the safe and efficient movement of traffic external to the site;

e. is consolidated and shared with adjoining sites wherever possible.

**PO65**

The safety and efficiency of pedestrian movement is prioritised in the design of car parking areas through providing pedestrian paths in car parking areas that are:

a. located along the most direct route between building entrances, car parks and adjoining uses;

b. protected from vehicle intrusion through the use of physical and visual separation (e.g. wheel stops, trees etc);

c. are of a width to allow safe and efficient access for prams and wheelchairs.

**PO66**

The number of car parking spaces is managed to:

a. avoid significant impacts on the safety and efficiency of the road network;

b. avoid an oversupply of car parking spaces;

c. avoid the visual impact of large areas of open car parking from road frontages and public areas;

d. promote active and public transport options;

e. promote innovative solutions, including on-street parking and shared parking areas.

**E66.1**

Car parking is provided in accordance with Table 6.2.6.4.5 'Car parking spaces'.

Note - The above rates exclude car parking spaces for people with a disability required by Disability Discrimination Act 1992 or the relevant disability discrimination legislation and standards.

**E66.2**

All car parking areas are designed and constructed in accordance with Australian Standard AS 2890.1 Parking facilities Part 1: Off-street car parking.
PO67

a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

i. adequate bicycle parking and storage facilities; and

ii. adequate provision for securing belongings; and

iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.

b. Notwithstanding a., there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

i. the projected population growth and forward planning for road upgrading and development of cycle paths; or

ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or

iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

E67.1

Minimum bicycle parking facilities are provided in accordance with the table below (rounded up to the nearest whole number).

<table>
<thead>
<tr>
<th>Use</th>
<th>Minimum Bicycle Parking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential uses comprised of dwellings</td>
<td>Minimum 1 space per dwelling</td>
</tr>
<tr>
<td>All other residential uses</td>
<td>Minimum 1 space per 2 car parking spaces identified in Schedule 7 – car parking</td>
</tr>
<tr>
<td>Non-residential uses</td>
<td>Minimum 1 space per 200m² of GFA</td>
</tr>
</tbody>
</table>

Editor’s note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E67.2

Bicycle parking is:

a. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor’s note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
E67.3

For non-residential uses, storage lockers:

a. are provided at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E67.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>

<td><strong>On-site landscaping is provided, that:</strong></td>
<td></td>
</tr>
<tr>
<td>a. is incorporated into the design of the development;</td>
<td></td>
</tr>
<tr>
<td>b. reduces the dominance of car parking and servicing areas from the street frontage;</td>
<td></td>
</tr>
<tr>
<td>c. retains mature trees wherever possible;</td>
<td></td>
</tr>
<tr>
<td>d. does not create safety or security issues by creating potential concealment areas or interfering with sight lines;</td>
<td></td>
</tr>
<tr>
<td>e. maintains the achievement of active frontages and sight lines for casual surveillance.</td>
<td></td>
</tr>
</tbody>
</table>

Note - All landscaping is to accord with Planning scheme policy - Integrated design.

**PO71**
Surveillance and overlooking are maintained between the road frontage and the main building line.

**E71**
No fencing is provided forward of the building line.

**PO72**
Lighting is designed to provide adequate levels of illumination to public and communal spaces to maximise safety and minimise adverse impacts on residential and other sensitive land uses.

**PO73**
The hours of operation minimise adverse amenity impacts on adjoining sensitive land uses.

**E73**
Hours of operation do not exceed 6:00am to 9:00pm Monday to Sunday.

**Values and constraints criteria**

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)**

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

**PO74**
Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

| a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment; |
| b. protects the environmental and ecological values and health of receiving waters; |
| c. protects buildings and infrastructure from the effects of acid sulfate soils. |

**E74**
Development does not involve:

| a. excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below than 5m Australian Height datum AHD; or |
| b. filling of land of more than 500m$^3$ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD. |
Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are excluded from the native vegetation clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO75

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;

b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can
be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

PO76
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;
b. providing contiguous patches of habitat;
c. provide replacement and rehabilitation planting to improve connectivity;
d. avoiding the creation of fragmented and isolated patches of habitat;
e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

Vegetation clearing and habitat protection

PO77
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

PO78
Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

### Vegetation clearing and soil resource stability

<table>
<thead>
<tr>
<th>PO80</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development does not:</td>
</tr>
<tr>
<td>a. result in soil erosion or land degradation;</td>
</tr>
<tr>
<td>b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.</td>
</tr>
<tr>
<td>No example provided.</td>
</tr>
</tbody>
</table>

### Vegetation clearing and water quality

<table>
<thead>
<tr>
<th>PO81</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:</td>
</tr>
<tr>
<td>a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;</td>
</tr>
<tr>
<td>b. avoiding or minimising changes to landforms to maintain hydrological water flows;</td>
</tr>
<tr>
<td>c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry and animal keeping activities.</td>
</tr>
<tr>
<td>No example provided.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>PO82</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development minimises adverse impacts of stormwater run-off on water quality by:</td>
</tr>
<tr>
<td>a. minimising flow velocity to reduce erosion;</td>
</tr>
<tr>
<td>b. minimising hard surface areas;</td>
</tr>
<tr>
<td>c. maximising the use of permeable surfaces;</td>
</tr>
<tr>
<td>d. incorporating sediment retention devices;</td>
</tr>
<tr>
<td>e. minimising channelled flow.</td>
</tr>
<tr>
<td>No example provided.</td>
</tr>
</tbody>
</table>

### Vegetation clearing and access, edge effects and urban heat island effects

<table>
<thead>
<tr>
<th>PO83</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.</td>
</tr>
<tr>
<td>No example provided.</td>
</tr>
</tbody>
</table>
### PO84
Development minimises potential adverse ‘edge effects’ on ecological values by:

- providing dense planting buffers of native vegetation between a development and environmental areas;
- retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- restoring, rehabilitating and increasing the size of existing patches of native vegetation;
- ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- landscaping with native plants of local origin.

**Editor’s note** - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

### PO85
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- pervious surfaces;
- providing deeply planted vegetation buffers and green linkage opportunities;
- landscaping with local native plant species to achieve well-shaded urban places;
- increasing the service extent of the urban forest canopy.

### Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

### PO86
Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

**Editor’s note** - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

### Extractive resources transport route (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

| PO87 | E87 | No example provided. | No example provided. |
Development:

a. does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route;

b. does not result in the establishment of uses that are incompatible with the operation of Extractive resource transport routes;

c. adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:

i. locating the furthest distance possible from the transportation route;

ii. habitable rooms being located the furthest from the transportation route;

iii. shielding and screening private outdoor recreation space from the transportation routes.

The following uses are not located within the 100m wide transport route buffer:

a. Caretaker’s accommodation\(^{(10)}\), except where located in the Extractive industry zone;

b. Community residence\(^{(16)}\);

c. Dual occupancy\(^{(21)}\);

d. Dwelling house\(^{(22)}\);

e. Dwelling unit\(^{(23)}\);

f. Hospital\(^{(36)}\);

g. Rooming accommodation\(^{(69)}\);

h. Multiple dwelling\(^{(49)}\);

i. Non-resident workforce accommodation\(^{(52)}\);

j. Relocatable home park\(^{(62)}\);

k. Residential care facility\(^{(69)}\);

l. Resort complex\(^{(66)}\);

m. Retirement facility\(^{(67)}\);

n. Rural workers’ accommodation\(^{(71)}\);

o. Short-term accommodation\(^{(77)}\);

p. Tourist park\(^{(84)}\).

PO88

Development:

a. does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route;

b. ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility;

c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

E88.1

Development does not create a new vehicle access point onto an Extractive resources transport route.

E88.2

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO89

Development will:

E89

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;</td>
</tr>
<tr>
<td>b.</td>
<td>protect the fabric and setting of the heritage site, object or building;</td>
</tr>
<tr>
<td>c.</td>
<td>be consistent with the form, scale and style of the heritage site, object or building;</td>
</tr>
<tr>
<td>d.</td>
<td>utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;</td>
</tr>
<tr>
<td>e.</td>
<td>incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;</td>
</tr>
<tr>
<td>f.</td>
<td>retain public access where this is currently provided.</td>
</tr>
</tbody>
</table>

**PO90**

Demolition and removal is only considered where:

- a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
- limited demolition is performed in the course of repairs, maintenance or restoration; or
- demolition is performed following a catastrophic event which substantially destroys the building or object.

**PO91**

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

**PO92**

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.

**E92**

Development does:

- not result in the removal of a significant tree;
- not occur within 20m of a protected tree;

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.
## Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

<table>

</tr>
</tbody>
</table>

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

| PO98 | Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation\(^{(66)}\) to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment. |

Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy – Noise.

No example provided.
**PO99**
Development within a Pumping station buffer is located, designed and constructed to:

a. ensure that odour or other air pollutant impacts on the amenity of the development met the air quality objectives in the Environmental Protection (Air) Policy 2008;

b. ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.

**E99**
Development does not involve the construction of any buildings or structures within a Pumping station buffer.

**Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)**

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

**PO100**
Development:

a. minimises the risk to persons from overland flow;

b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.

No example provided.

**PO101**
Development:

a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;

b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.

No example provided.

**PO102**
Development does not:

No example provided.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>directly, indirectly or cumulatively cause any increase in overland flow velocity or level;</td>
</tr>
<tr>
<td>b.</td>
<td>increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.</td>
</tr>
</tbody>
</table>

Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.

**PO103**

Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.

**E103**

Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.

**PO104**

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

**E104**

Development which is not in a Rural zone ensure that overland flow is not conveyed from a road or public open space onto a private lot.

**PO105**

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

**E105.1**

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

a. Urban area – Level III;  
b. Rural area – N/A;  
c. Industrial area – Level V;  
d. Commercial area – Level V.

**E105.2**

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

**PO106**

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

a. a stormwater pipe if the nominal pipe diameter exceeds 300mm;

No example provided.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>b.</td>
<td>an overland flow path where it crosses more than one premises;</td>
</tr>
<tr>
<td>c.</td>
<td>inter-allotment drainage infrastructure.</td>
</tr>
</tbody>
</table>

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

### Additional criteria for development for a Park

**PO107**

Development for a Park ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- a. public benefit and enjoyment is maximised;
- b. impacts on the asset life and integrity of park structures is minimised;
- c. maintenance and replacement costs are minimised.

**E107**

Development for a Park ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

### Riparian and wetland setbacks

**PO108**

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- a. impact on fauna habitats;
- b. impact on wildlife corridors and connectivity;
- c. impact on stream integrity;
- d. impact of opportunities for revegetation and rehabilitation planting;
- e. edge effects.

**E108**

Development does not occur within:

- a. 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line
- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

### Scenic amenity - Regionally significant (Hills) and Locally important (Coast) (refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)

**PO109**

Landscaping

**E109**

Where located in the Locally Important (Coast) scenic amenity overlay:
a. complements the coastal landscape character and amenity;

b. has known resilience and robustness in the coastal environment;

Fences and walls:

a. do not appear visually dominant or conspicuous within its setting;

b. reduce visual appearance through the use of built form articulation, setbacks, and plant screening;

c. use materials and colours that are complementary to the coastal environment.

Building design responds to the bayside location and complements the particular bayside character and amenity by adopting and incorporating a range of architectural character elements.

Vegetation that contributes to bayside character and identity are:

a. retained;

b. protected from development diminishing their significance.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code.

6.2.7 Industry zone code

6.2.7.1 Application - Industry zone

This code applies to undertaking development in the Industry zone, if:

1. the development has been categorised as either accepted development subject to requirements or assessable development - code assessment, and this code is identified as applicable to that development in the assessment benchmarks for assessable development and requirements for accepted development column of a table of assessment (Part 5);

2. the development has been categorised as assessable development - impact assessment (Part 5).

When using this code, reference should be made to section 5.3.2 Determining the category of development and category of assessment and, where applicable, section 5.3.3 Determining and applying the requirements for accepted development and the assessment benchmarks for assessable development located in Part 5.

For accepted development subject to requirements or assessable development under this Code:

1. Part A of the code applies to accepted development subject to requirements in all precincts;

2. Part B of the code applies only to assessable development in the 6.2.7.1 'Mixed industry and business precinct';

3. Part C of the code applies only to assessable development in the 6.2.7.2 'Light industry precinct';

4. Part D of the code applies only to assessable development in the 6.2.7.3 'General industry precinct';

5. Part E of the code applies only to assessable development in the 6.2.7.4 'Restricted industry precinct';

6. Part F of the code applies only to assessable development in the 6.2.7.5 'Marine industry precinct'.

6.2.7.2 Purpose - Industry zone

1. The purpose of the Industry zone code is to provide for a range of service, low, medium, or high impact industrial uses. It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.

2. Industry areas contain high quality, fully serviced, accessible land accommodating a wide range of industrial and supporting activities in accordance with acceptable environmental standards and with minimal impact on surrounding uses. The purpose of the Industry zone code is to implement the policy direction as set out in Part 3, Strategic Framework. The Industry zone contains 5 precincts which have the following purpose:

   a. The Mixed industry and business precinct will facilitate a range of low impact industry\(^{(42)}\) and associated commercial uses which have a nexus with other industrial activities occurring in the precinct.

   b. The Light industry precinct will facilitate and maintain the long term viability of a range of low impact and low intensity industrial and business activities which are compatible with adjacent commercial and residential areas.

   c. The General industry precinct will facilitate and maintain the long term viability of a broad range of industrial uses which provide significant employment opportunities and require locations which are well separated from incompatible uses.

   d. The Restricted industry precinct will support the continued viability of a range of high impact and hard to locate industrial uses which contribute significantly to the regional economy and require locations which are well separated from incompatible uses.

   e. The Marine industry precinct will facilitate and maintain the long-term viability waterfront-based industry and associated commercial activities which require direct access to a waterway.
6.2.7.3 Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part A, Table 6.2.7.1. Where the development does not meet a requirement for accepted development (RAD) within Part A, Table 6.2.7.1, the category of development changes to assessable development under the rules outlined in section 5.3.3. (1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

### Part A—Requirements for accepted development - All precincts

#### Table 6.2.7.1 Requirements for accepted development - All precincts

<table>
<thead>
<tr>
<th>Requirements for accepted development</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General requirements</strong></td>
</tr>
<tr>
<td><strong>Extensions to existing buildings</strong></td>
</tr>
</tbody>
</table>
| **RAD1** | Extensions to an existing building do not exceed 20% of the existing GFA on-site.  
          | Note - The 20% increase in GFA includes all previous instances of GFA increase under this outcome, or as part of Building Work. |
| **Building height** |
| **RAD2** | Building height does not exceed the maximum height identified on Overlay map - Building heights. |
| **Setbacks** |
| **RAD3** | Extensions to buildings maintain a minimum setback of:  
          | a. 6m to the street frontage (other than the Bruce Highway);  
          | b. 3m to the secondary street frontage;  
          | c. 5m to land not included in the Industry zone;  
          | d. 10m to a boundary adjoining the Bruce Highway. |
| **Landscaping** |
| **RAD4** | Development does not result in a net reduction in established landscaping on the site. |
| **Lighting** |
| **RAD5** | Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of the Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.  
          | Note - "Curfewed hours" are taken to be those between 10pm and 7am the following day. |
| **Car parking** |
| **RAD6** | On-site car parking is provided at a rate identified in Schedule 7 - Car parking. |
| **Waste** |
| **RAD7** | Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste. |
### Requirements for accepted development

**Clearing of habitat trees where not located in the Environmental areas overlay map**

<table>
<thead>
<tr>
<th>RAD8</th>
<th>Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. Clearing of a habitat tree located within an approved development footprint;</td>
</tr>
<tr>
<td></td>
<td>b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;</td>
</tr>
<tr>
<td></td>
<td>c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;</td>
</tr>
<tr>
<td></td>
<td>d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;</td>
</tr>
<tr>
<td></td>
<td>e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;</td>
</tr>
<tr>
<td></td>
<td>f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;</td>
</tr>
<tr>
<td></td>
<td>g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;</td>
</tr>
<tr>
<td></td>
<td>h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.</td>
</tr>
</tbody>
</table>

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a ‘habitat tree’. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

### Works requirements

**Utilities**

<table>
<thead>
<tr>
<th>RAD9</th>
<th>Where available, the development is connected to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. an existing reticulated electricity supply;</td>
</tr>
<tr>
<td></td>
<td>b. telecommunications and broadband;</td>
</tr>
<tr>
<td></td>
<td>c. reticulated sewerage;</td>
</tr>
<tr>
<td></td>
<td>d. reticulated water;</td>
</tr>
<tr>
<td></td>
<td>e. sealed and dedicated road;</td>
</tr>
</tbody>
</table>

Development is provided with an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).
### RAD

The frontage road is fully constructed to Council’s standards.

**Note** - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**Note** - Frontage roads include streets where no direct lot access is provided.

### RAD10

Any new or changes to existing site access crossovers and driveways are designed and located in accordance with:

- **a.** where for a Council-controlled road and associated with a Dwelling house:
  - i. Planning scheme policy - Integrated design;

- **b.** where for a Council-controlled road, and not associated with a Dwelling house:
  - i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
  - ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
  - iii. Planning scheme policy - Integrated design;
  - iv. Schedule 8 - Service vehicle requirements;

- **c.** where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

### RAD11

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

### RAD

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

### RAD

Access driveways, manoeuvring areas and loading facilities are constructed with reinforced concrete road pavements. Concrete is to be designed in accordance with rigid road pavement design principles.

**Note** - Pavements are to be designed by a RPEQ.

### Stormwater

Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.
Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

**RAD13**  Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy - Integrated design if the development:-

a. is for urban purposes only;

b. involves a land area greater than 2500m²;

c. will result in 6 or more dwellings;

OR

will result in an impervious area greater than 25% of the net developable area.

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and

b. that results in 6 or more dwellings; or

c. that result in an impervious area greater than 25% of the net developable area;

incorporates a 'deemed to comply solution' to manage stormwater quality.

Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design ‘Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland’ and Planning scheme policy - Integrated design.

**RAD**  Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

**RAD**  Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

**RAD**  Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with Sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits.</td>
</tr>
</tbody>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning scheme policy - Integrated design (Appendix C) for easement requirements over open channels.

### Site works and construction management

| RAD14 | The site and any existing structures are to be maintained in a tidy and safe condition. |
| RAD15 | Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design. Development does not cause erosion or allow sediment to leave the site. |

Note - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation. |

| RAD | No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works. |
| RAD | Existing street trees are protected and not damaged during works. |

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented. |

| RAD18 | Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification. |
| RAD16 | Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. |
| RAD19 | Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times. |
| RAD17 | All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. |

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works |

| RAD | Disposal of materials is managed in one or more of the following ways: |
a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - No burning of cleared vegetation is permitted.

Note - The chipped vegetation must be stored in an approved location.

### RAD

All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.

### Earthworks

**RAD21**

The total of all cut and fill on-site does not exceed 900mm in height.

**Figure - Cut and Fill**

Note - This is site earthworks not building work.

Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level

**OR**

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;
Cut and fill batters, (other than to batters to dams and water impoundments), have a finished slope no steeper than the following:

a. any cut batter is no steeper than 1V in 4H;
b. any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;
c. any compacted fill batter is no steeper than 1V in 4H;

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

Note - Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.

All fill and excavation is contained on-site and is free draining.

Earthworks undertaken on the development site are shaped in a manner which does not:

a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
b. redirect stormwater surface flow away from existing flow paths; or
c. divert stormwater surface flow onto adjacent land (other than a road) in a manner which:
   i. concentrates the flow; or
   ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
   iii. causes actionable nuisance to any person, property or premises.

All fill placed on-site is:
a. limited to that necessary for the approved use;
b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.

RAD20 The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

RAD No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity is defined in Schedule 2 of the Act.

RAD22 Filling or excavation that would result in any of the following is not carried out on site: does not result in:

a. reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken;
c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Schedule 2 of the Act.

Fire services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.
### RAD23
External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations*.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks[^84] or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   
   i. - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   
   ii. - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   
   iii. - for outdoor sales[^54], processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales[^54], outdoor processing and outdoor storage facilities; and

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.

### RAD24
A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

### RAD25
For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

   i. the overall layout of the development (to scale);
   
   ii. internal road names (where used);
   
   iii. all communal facilities (where provided);
   
   iv. the reception area and on-site manager’s office (where provided);
   
   v. external hydrants and hydrant booster points;
   
   vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

a. in a form;

b. of a size;

c. illuminated to a level;
which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

### Use specific requirements

#### Land use

| RAD26 | Where within 100m of a sensitive zone:
| a. | development is undertaken fully indoors;
| b. | uses do not create audible noise measured at the boundary of the site between the hours of 7:00 pm and 6:00 am;
| c. | any new plant or air conditioning equipment is not located along adjoining boundaries with sensitive land uses and screened from view of the street;
| d. | landscaping and noise attenuating fencing are used to buffer visual and audible impacts generated from the use.

| RAD27 | The combined area for ancillary office and administration functions does not exceed 20% of the GFA or 200m² whichever is the lesser.

| RAD28 | The display of items for sale to the public is limited to commodities, articles or goods resulting from the industrial processes undertaken on-site and limited to 5% of the GFA or 100m² of the use, whichever is the lesser.

#### Caretaker's accommodation

| RAD29 | Caretaker's accommodation: a. has a maximum GFA of 80m²;
| b. | does not gain access from a separate driveway to the principal use of the site;
| c. | includes a minimum 16m² of private open space directly accessible from a habitable room.

#### Hazardous Chemicals

| RAD30 | All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.1 Quantity thresholds for hazardous chemicals stored as accepted development subject to requirements complies with Table 9.0.3 Hazardous chemicals.

| RAD31 | Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.2 Hazardous chemicals assessable thresholds.

#### Telecommunications facility

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

| RAD32 | A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.
| RAD33 | The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval. |
| RAD34 | Equipment shelters and associated structures are located:  
  a. directly beside the existing equipment shelter and associated structures;  
  b. behind the main building line;  
  c. further away from the frontage than the existing equipment shelter and associated structures;  
  d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. |
| RAD35 | Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality. |
| RAD36 | The facility is enclosed by security fencing or by other means to ensure public access is prohibited. |
| RAD37 | A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.  
  Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.  
  Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design. |
| RAD38 | All equipment comprising the telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary. |

### Values and constraints requirements

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)**

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m3 and 500m3 respectively.

| RAD39 | Development does not involve:  
  a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or  
  b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD. |
Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

| RAD40 | Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house (22) and all associated facilities* or an extension to an existing dwelling house (22) only, and comprises an area no greater than 1500m². |
Note - *All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.

Editor's note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor's note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;
ii. be the least valued area of koala habitat on the site;
iii. minimise the footprint of the development envelope area;
iv. minimise edge effects to areas external to the development envelope;
v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;
vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor’s note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

RAD41  
No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following requirements apply)

RAD42  
Development does not result in more than one dwelling house(22) per lot within separation areas.

RAD43  
Development within the separation area does not include the following uses:

a. caretaker’s accommodation(10);
b. community residence(16);
c. dual occupancy(21);
d. dwelling unit(23);
e. hospital(36);
f. rooming accommodation(69).
g. multiple dwelling\(^{(49)}\);

h. non-resident workforce accommodation\(^{(52)}\);

i. relocatable home park\(^{(62)}\);

j. residential care facility\(^{(65)}\);

k. resort complex\(^{(66)}\);

l. retirement facility\(^{(67)}\);

m. rural workers’ accommodation\(^{(71)}\);

n. short-term accommodation\(^{(77)}\);

o. tourist park\(^{(84)}\).

### RAD44
All habitable rooms within the separation area are:

a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;

b. provided with mechanical ventilation.

### RAD45
Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

### Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following requirements apply)

#### RAD46
The following uses are not located within the 100m wide transport route buffer:

a. Caretaker’s accommodation\(^{(10)}\), except where located in the Extractive industry zone;

b. Community residence\(^{(16)}\);

c. Dual occupancy\(^{(21)}\);

d. Dwelling house\(^{(22)}\);

e. Dwelling unit\(^{(23)}\);

f. Hospital\(^{(36)}\);

g. Rooming accommodation\(^{(69)}\);

h. Multiple dwelling\(^{(49)}\);

i. Non-resident workforce accommodation\(^{(52)}\);

j. Relocatable home park\(^{(62)}\);

k. Residential care facility\(^{(65)}\);

l. Resort complex\(^{(66)}\);

m. Retirement facility\(^{(67)}\);

n. Rural workers’ accommodation\(^{(71)}\);

o. Short-term accommodation\(^{(77)}\);

p. Tourist park\(^{(84)}\).

#### RAD47
Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.

#### RAD48
A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)

**Note** - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

#### RAD49
Development is for the preservation, maintenance, repair and restoration of the site, object or building.
This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

**RAD50**

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

**RAD51**

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

**RAD52**

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;
b. laying of overhead or underground services;
c. any sealing, paving, soil compaction;
d. any alteration of more than 75mm to the ground surface level prior to work commencing.

**RAD53**

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

**Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following requirements apply)**

**RAD54**

Development does not include the following uses within a Wastewater treatment site buffer:

a. Caretaker’s accommodation\(^{(10)}\);
b. Community residence\(^{(16)}\);
c. Dual occupancy\(^{(21)}\);
d. Dwelling house\(^{(22)}\);
e. Dwelling unit\(^{(23)}\);
f. Hospital\(^{(36)}\);
g. Rooming accommodation\(^{(69)}\);
h. Multiple dwelling\(^{(49)}\);
i. Non-resident workforce accommodation\(^{(52)}\);
j. Relocatable home park\(^{(62)}\);
k. Residential care facility\(^{(65)}\);
l. Resort complex\(^{(66)}\);
m. Retirement facility\(^{(67)}\);
n. Rural workers’ accommodation\(^{(71)}\);
o. Short-term accommodation\(^{(77)}\);
p. Tourist park\(^{(84)}\).

**RAD55**

Development does not include the following uses located within a landfill site buffer:

a. caretaker’s accommodation\(^{(10)}\);
b. community residence\(^{(16)}\);
c. dual occupancy\(^{(21)}\);
<p>| | |</p>

**RAD56** All habitable rooms located within an Electricity supply substation buffer are:

a. located a minimum of 10m from an electricity supply substation<sup>(80)</sup>; and
b. acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.

**RAD57** Development does not involve the construction of any buildings or structures containing habitable rooms or sensitive land uses within a High voltage electricity line buffer.

**Overland flow path (refer Overlay map - Overland flow path to determine if the following requirements apply)**

**RAD58** Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.

**RAD59** Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

**RAD60** Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.

**RAD61** Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.

**RAD62** Development for a material change of use or building work for a Park<sup>(57)</sup> ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

**Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following requirements apply)**

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

**RAD63** No development is to occur within:

a. 50m from top of bank for W1 waterway and drainage line
b. 30m from top of bank for W2 waterway and drainage line
c. 20m from top of bank for W3 waterway and drainage line

d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

Transport noise corridors (refer Overlay map - Transport noise corridors)

Note - This is for information purposes only. No requirements for accepted development or criteria for assessable development apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code.
6.2.7.1 Mixed industry and business precinct

6.2.7.1.1 Purpose - Mixed industry and business precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Mixed industry and business precinct:

   a. A range of employment-intensive, knowledge-based, low impact industrial activities and associated commercial activities are established in the precinct which benefit from high levels of exposure and access to high quality transport infrastructure.

   b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.

   c. Development is located, designed and managed to:

      i. maintain the health and safety of people;
      ii. avoid significant adverse effects on the natural environment;
      iii. minimise the possibility of adverse impacts on nearby non-industrial uses;
      iv. be adaptable for alternative industry uses.

   d. Development has access to infrastructure and essential services and safe and convenient access to major transport routes.

   e. Development is designed to incorporate sustainable practices including water sensitive design and energy efficient building design.

   f. The scale, character, and built form of development and the resulting streetscape contribute to a high standard of visual and physical amenity and incorporate crime prevention through environmental design (CPTED) principles.

   g. Commercial, Shop and Office activities only occur in the precinct where:

      i. there is a justified need for the use to be located in the precinct;
      ii. the use does not compromise the role or function of the region's centres network.

   h. Sensitive land uses do not occur where they could compromise or constrain existing or future industrial land uses in the precinct or adjoining industrial areas.

   i. Special industry\(^{(79)}\) does not establish within the precinct.

   j. Development encourages public transport patronage and active transport choices through streetscape improvements and the provision of appropriate end of trip facilities.

   k. The continued operation of Places of worship and Medium impact industries that were lawfully established at commencement is supported. Any extensions to these uses needs to satisfy the outcomes of this code.

   l. Large format retail, car dominated uses or uses that require large outdoor storage space are not located in the precinct.

   m. Development provides a high quality urban form and landscaped environment.

   n. General works associated with the development achieves the following:

      i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
ii. the development manages stormwater to:
   A. ensure the discharge of stormwater does not adversely affect the quality, environmental values
      or ecosystem functions of downstream receiving waters;
   B. prevent stormwater contamination and the release of pollutants;
   C. maintain or improve the structure and condition of drainage lines and riparian areas;
   D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external
     road network;

iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or
   adjacent premises, the streetscape or the environment.

o. Development does not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

p. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to
   appropriate levels and do not cause environmental harm or nuisance.

q. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels
   of noise.

r. Development avoids areas subject to constraint, limitation, or environmental value. Where development
   cannot avoid these identified areas, it responds by:
   i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any
      area subject to a constraint, limitation or environmental value to minimise the potential risk to people,
      property and the environment;
   ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
   iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives
       contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality
       Management in Drinking Water Catchments 2012.
   iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological,
       aquatic, hydrological and amenity values, and enhancing these values through the provision of planting
       and landscaping, and facilitating safe wildlife movement and connectivity through:
       A. the provision of replacement, restoration, rehabilitation planting and landscaping;
       B. the location, design and management of development to avoid or minimise adverse impacts on
          ecological systems and processes;
       C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant
    trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified
    infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other
    nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation
     and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance
    and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:
   A. development siting, built form, layout and access responds to the risk presented by the overland
      flow and minimises risk to personal safety;
   B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts
      for the potential risks to property associated with the overland flow;
C. Development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;

D. Development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

s. Development in the Mixed industry and business precinct includes one or more of the following:

u. Development not included in the tables above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.1.2 Criteria for assessable development

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part B, Table 6.2.7.1.1 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

Part B—Criteria for assessable development - Mixed industry and business precinct

Table 6.2.7.1.1 Assessable development - Mixed industry and business precinct

<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site cover</td>
<td></td>
</tr>
</tbody>
</table>

**PO1**

Site cover is limited to a proportion of a site that ensures:

a. A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;

b. Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;

No example provided.
| c. | setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses; |
| d. | Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site. |

### Building height

| PO2 | The height of buildings is in keeping with the predominant industrial and commercial character of the precinct and does not cause adverse amenity impacts on nearby sensitive land uses and zones. |
| E2 | Building height does not exceed the maximum height identified on Overlay map - Building heights. |

### Setbacks

| PO3 | Street boundary setbacks: |
| E3 | Buildings maintain a minimum setback of: |
| a. | minimise building bulk and visual dominance from the street; |
| b. | provide areas for landscaping at the front of the site; |
| c. | allow for customer parking to be located at the front of the building; |
| d. | provide opportunities for dense landscaping to screen at maturity any visibility of development of a site from the Bruce Highway. |
| a. | 6m to the primary frontage (other than the Bruce Highway); |
| b. | 3m to the secondary street frontage; |
| c. | 10m to a boundary adjoining the Bruce Highway. |

| PO4 | Side and rear boundary setbacks maintain views, privacy, access to natural light and the visual amenity of adjoining sensitive land uses. |
| E4 | Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m. |

**Note** - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.

### Building appearance and design

| PO5 | Buildings exhibit a high standard of commercial design and construction, which: |
| No example provided. | a. adds visual interest to the streetscape, through variation in building materials, colours and features; |
b. does not result in blank, unarticulated walls fronting streets or public areas;

c. reduces the perceived bulk of the building when viewed from the street;

d. articulates or accentuates the administration and customer service areas of the building;

e. contributes to safe environment, through the incorporation of CPTED principles;

f. incorporates high quality, low maintenance building materials;

g. does not utilise highly reflective materials.

Note - The following examples illustrate an acceptable design response to this outcome.

<table>
<thead>
<tr>
<th>PO6</th>
<th>Buildings on corner allotments:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>address both street frontages;</td>
</tr>
</tbody>
</table>
b. contain building openings facing both street frontages;
c. do not present blank unarticulated walls to either frontage.

Note - The following example illustrates an acceptable design response to this outcome.

Staff recreation area

PO7
Staff are provided with adequate and amenable break/dining facilities to suit the nature of the activities on-site.

E7
Where the nature of the activities on-site do not allow staff to eat in their work environment, the development provides an on-site recreation area for staff that:

a. includes adequate seating, tables and rubbish bins for the number of staff on-site;
b. is adequately protected from the weather;
c. is safely accessible to all staff;
d. is separate and private from public areas;
e. is located away from a noisy or odorous activity.

Landscaping

PO8
Landscaping is provided on the site to:

a. visually soften the built form, areas of hardstand, storage areas and mechanical plant associated with the on-site activities;
b. complement the existing or desired streetscape;
c. minimise the impact of industrial development on any adjoining lots not zoned for industrial purposes.

E8
Landscaping is provided and maintained in accordance with Planning scheme policy - Integrated design.
### Fencing

**PO9**

The provision of fencing on street frontages does not dominate the street or create safety issues.

*Note - The following example illustrates an acceptable design response to this outcome.*

![Fencing Example](image)

**E9**

Where fencing is provided on the street frontage, fence sections between columns or posts have a minimum transparency of 70% spread evenly across its total surface area.

### Public access

**PO10**

The use has a safe, clearly identifiable public access separate from service and parking areas.

*Note - The following diagram illustrates an acceptable design response to this outcome.*

![Public Access Diagram](image)

**E10.1**

Pedestrian linkages are provided from the street and customer car parking areas directly to the main entrance of the building.

**E10.2**

Public access to the building is not provided through industrial service areas.

### Movement network

**PO**

**E**
Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above example.

### Car parking

**PO11**  
Car parking is provided on-site to meet the anticipated demand of employees and visitors and avoid adverse impacts on the external road network.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

**E11**  
Car parking is provided in accordance with Schedule 7 - Car parking.

**PO12**  
The design of vehicle entry points and car parking areas:

a. does not impact on the safety of the external road network;

b. ensures the safety of pedestrians at all times;

c. ensures the safe movement of vehicles within the site;

d. provides connections with car parking areas on adjoining sites where possible.

**E12**  
All vehicle entry points and car parking areas are designed and constructed in accordance with Australian Standard AS 2890.1 Parking facilities Part 1: Off-street car parking.

- does not impact on the safety of the external road network;
- ensures the safety of pedestrians at all times;
- ensures the safe movement of vehicles within the site;
- provides connections with car parking areas on adjoining sites where possible.

**PO13**  
Vehicle cross-overs do not dominate the street frontage.

**E13**  
A maximum of 1 vehicle cross-over is provided to each street frontage unless required for manoeuvring purposes.

### Bicycle parking and end of trip facilities

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

**PO14**  
a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

**E14.1**  
Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.
Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E14.2

Bicycle parking is:

a. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E14.3

For non-residential uses, storage lockers:

a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

**E14.4**

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-5</td>
<td>Male and female</td>
<td>1 unisex change room</td>
<td>1</td>
<td>1 closet pan</td>
<td>1</td>
</tr>
<tr>
<td>6-19</td>
<td>Female</td>
<td>1</td>
<td>1 closet pan</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>20 or more</td>
<td>Male</td>
<td>1</td>
<td>1 closet pan</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Female</td>
<td>1</td>
<td>2+1 for every 20 bicycle spaces provided thereafter</td>
<td>2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
<tr>
<td></td>
<td>Male</td>
<td>1</td>
<td>2+1 for every 20 bicycle spaces provided thereafter</td>
<td>1 urinal and 1 closet pans, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:

i. a mirror located above each wash basin;

ii. a hook and bench seating within each shower compartment;

iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.
Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

### Loading and servicing

**PO15**
Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads.

*Note* - If landscaping is proposed for screening purposes, refer to Planning scheme Policy - Integrated design for determining acceptable levels.

No example provided.

### Waste

**PO16**
Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy - Waste. Areas are designed, located and managed to prevent amenity impacts on the locality.

No example provided: **E16**

Development is designed to meet the criteria in the Planning scheme policy - Waste and is demonstrated in a waste management program.

### Environmental impacts

**PO17**
Where a use is not an environmentally relevant activity under the *Environmental Protection Act 1994*, the release of any containment that may cause environmental harm is mitigated to an acceptable level.

**E17**
Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.

### Lighting

**PO18**
Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.

**E18**
Artificial lighting is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of the Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

*Note* - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day.

### Noise

**PO19**

No example provided.
Noise generating uses do not adversely affect existing noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

**PO20**

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);

b. maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

**E20.1**

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

**E20.2**

Noise attenuation structures (e.g. walls, barriers or fences):

a. are not visible from an adjoining road or public area unless:
   i. adjoining a motorway or rail line; or
   ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.

b. do not remove existing or prevent future active transport routes or connections to the street network;

c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

**Hazardous Chemicals**

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

**PO21**

**E21.1**
Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

**Dangerous Dose**

a. For any hazard scenario involving the release of gases or vapours:
   i. AEGL2 (60 minutes) or if not available ERPG2;  
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
   i. 7kPa overpressure;  
   ii. 4.7kW/m² heat radiation.

If criteria E1.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of $0.5 \times 10^{-6}$/year.

**E21.2**

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

**Dangerous Dose**

a. For any hazard scenario involving the release of gases or vapours:
   i. AEGL2 (60 minutes) or if not available ERPG2;  
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
   i. 7kPa overpressure;  
   ii. 4.7kW/m² heat radiation.

If criteria E1.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of $5 \times 10^{-6}$/year.

**E21.3**

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

### Dangerous Dose

**a.** For any hazard scenario involving the release of gases or vapours:

i. AEGL2 (60 minutes) or if not available ERPG2;

ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

**b.** For any hazard scenario involving fire or explosion:

i. 14kPa overpressure;

ii. 12.6kW/m² heat radiation.

If criteria E1.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10⁻⁶/year.

| Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government “flood hazard area” are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries. | The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively:

a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and

b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level. |

| **E24.2** |
The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

### Emissions into Brisbane operational airspace

**PO25**

Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport’s operational airspace.

Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport’s operational airspace.

**E25.1**

Development does not emit a gaseous plume into the airport's operational airspace at a velocity exceeding 4.3m per second.

**E25.2**

Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

### Clearing of habitat trees where not located within the Environmental areas overlay map

**PO26**

a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.

c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

### Works criteria

**Utilities**

**PO**

No example provided.
All services including water supply, sewage disposal, electricity, street lighting, telecommunications and gas (if available) are provided in accordance with Planning scheme policy - Integrated design (Appendix A).

<tbody>
<tr>
<td>Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.</td>
<td></td>
</tr>
</tbody>
</table>
The layout of the development does not compromise:

a. the development of the road network in the area;
b. the function or safety of the road network;
c. the capacity of the road network.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

The development provides for the extension of the road network in the area in accordance with Council’s road network planning.

E33.2

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council’s road planning.

E33.3

The layout allows forward vehicular access to and from the site.

E33.4

For land located at Deception Bay, all vehicle access to Deception Bay Road is via a future 4-way signalised intersection at Deception Bay Road and Zammit Street, as illustrated in Figure - Deception Bay Road Mixed Industry and Business, except where an alternative access has been previously approved by TMR or allowed through an existing development approval. No direct property access is provided to Deception Bay Road.

E34.1

Site access and driveways are designed and located and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. Where for a Council-controlled road, and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
E34.2
Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:
a. AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking;
b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and
c. the relevant standards in Planning scheme policy - Integrated design; and
d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

E34.3
Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

E
Access driveways, manoeuvring areas and loading facilities are constructed with reinforced concrete road pavements. Concrete is to be designed in accordance with rigid road pavement design principles.

Note - Pavements are to be designed by an RPEQ.

E
Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO
Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor’s Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

E
Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.
Roads which provide access to the site from an arterial or sub-arterial road remain trafficable during major storm events without flooding or impacting upon residential properties or other premises.

Access roads to the development have sufficient longitudinal and cross drainage to remain safely trafficable during major storm (1% AEP) events.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - Refer to QUDM for requirements regarding trafficability.

E

Culverts and causeways do not increase inundation levels or increase velocities, for all events up to the defined flood event, to upstream or downstream properties.

<table>

<tr>
<td>h. setting and approach (streetscape, landscaping and street furniture) for adjoining residences;</td>
</tr>
<tr>
<td>i. expected traffic speeds and volumes; and</td>
</tr>
<tr>
<td>j. wildlife movement.</td>
</tr>
</tbody>
</table>

Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.
PO35

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;

b. ensure the orderly and efficient continuation of the active transport network;

c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with e. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or-

ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road are shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- Development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;

- Forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;

- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m² Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m² GFA;
- Warehouses and Industry greater than 6000m² GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissects or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

**Note** - The road network is mapped on Overlay map - Road hierarchy.

**Note** - The primary and secondary active transport network is mapped on Overlay map - Active transport.

---

**PO**

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

---

**E**

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

---

**E**

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. where the through road provides an access function;
   i. intersecting road located on the same side = 60 metres;
   ii. intersecting road located on opposite side (Left Right Stagger) = 60 metres;
   iii. intersecting road located on opposite side (Right Left Stagger) = 40 metres.

b. Where the through road provides a collector or sub-arterial function:
i. intersecting road located on the same side = 100 metres;

ii. intersecting road located on opposite side (Left Right Stagger) = 100 metres;

iii. intersecting road located on opposite side (Right Left Stagger) = 60 metres.

c. Where the through road provides an arterial function:

i. intersecting road located on the same side = 300 metres;

ii. intersecting road located on opposite side (Left Right Stagger) = 300 metres;

iii. intersecting road located on opposite side (Right Left Stagger) = 300 metres;

d. Walkable block perimeter does not exceed 1000 metres.

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (ie. left in/left out only) at intersections with sub-arterial roads or arterial roads.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

PO

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

E

Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only;</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width</td>
</tr>
</tbody>
</table>

OR
### Stormwater

<p>| PO | Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient. |
| E | The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design. |
| E | Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM. |
| E | Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM. |</p>
<table>

<td><strong>PO</strong> Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment.</td>
<td><strong>E</strong> The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site.</td>
</tr>
<tr>
<td><strong>E</strong> The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots.</td>
<td><strong>E</strong> Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas.</td>
</tr>
<tr>
<td><strong>E</strong> The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel. Note - Refer to QUDM for recommended average flow velocities.</td>
<td><strong>E</strong> The stormwater drainage system is designed and constructed in accordance with Planning scheme policy - Integrated design.</td>
</tr>
<tr>
<td><strong>PO</strong> Provide measures to properly manage surface flows for the 1% AEP event (for the fully developed catchment) draining to and through the land to ensure no actionable nuisance is created to any person or premises as a result of the development. The development must not result in ponding on adjacent land, redirection of surface flows to other premises or blockage of a surface flow relief path for flows exceeding the design flows for any underground system within the development.</td>
<td>No example provided.</td>
</tr>
</tbody>
</table>

**PO36**

Stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood.
levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

</tbody>
</table>

### E41.2

Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

**Note** - The measures are adjusted on-site to maximise their effectiveness.

### E41.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

### E41.4

*Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.*

**Existing street trees are protected and not damaged during works:**

**Note** - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.</td>
</tr>
</tbody>
</table>
Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

Access to the development site is obtained via an existing lawful access point.

### PO44

All disturbed areas are **to be progressively stabilised during construction and the entire site** rehabilitated and **substantially stabilised** at the completion of construction.

- **Note** - Refer to Planning scheme policy - Integrated design for details.

### E44

At completion of construction all disturbed areas of the site are to be:

1. **topsoiled** with a minimum compacted thickness of fifty (50) millimetres;
2. **grassed** stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

- **Note** - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

### PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

- **Note** - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).

### E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

### PO45

The clearing of vegetation on-site:

- a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and
- b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;
- c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

- **Note** - No burning of cleared vegetation is permitted.

### E45.1

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

- **Note** - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

### E45.2

Disposal of materials is managed in one or more of the following ways:
a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or
b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

**PO**

All development works are carried out at times which minimise noise impacts to residents:

- Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;
- No work is to be carried out on Sundays or public holidays.

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

**PO46**

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

No example provided.

**Earthworks**

**PO47**

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- the natural topographical features of the site;
- short and long-term slope stability;
- soft or compressible foundation soils;
- reactive soils;
- low density or potentially collapsing soils;

**E47.1**

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**E47.2**

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

**E47.3**
f. existing fill and soil contamination that may exist on-site;
g. the stability and maintenance of steep rock slopes and batters;
h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note: Existing fill and soil contamination that may exist on-site;

<table>
<thead>
<tr>
<th>Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

**PO48**
Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

**E48**
Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

**PO49**
Filling or excavation is undertaken in a manner that:

**E49.1**
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.
a. does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;  

b. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes.

Note - Public sector entity as defined in Schedule 2 of the Act the Sustainable Planning Act 2009.

**E49.2**

Filling or excavation that would result in any of the following is not carried out on-site:

a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity as defined in the Sustainable Planning Schedule 2 of the Act 2009.

</tbody>
</table>

<table>
<thead>
<tr>
<th>PO</th>
<th>Filling and excavation undertaken on the development site are shaped in a manner which does not:</th>
<th></th>
</tr>
</thead>
</table>
### Filling or excavation

Filling or excavation on the development site is undertaken in a manner which does not create or accentuate problems associated with stormwater flows and drainage systems on land adjoining the site.

- a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
- b. redirect stormwater surface flow away from existing flow paths; or
- c. divert stormwater surface flow onto adjacent land, (other than a road), in a manner which:
  - i. concentrates the flow; or
  - ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
  - iii. causes actionable nuisance to any person, property or premises.

### Retaining walls and structures

**PO52**

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

**Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.**

**E52**

**Earth retaining structures:**

- a. are not constructed of boulder rocks or timber;
- b. where height is no greater than 900mm, are provided in accordance with Figure – Retaining on a boundary:

  ![Figure – Retaining on boundary](image)

- c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;
- d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal; terraced, landscaped and drained as shown below.

  ![Figure – Cut](image)
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;
c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements;  

E

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/precinct’s current occupancy and use;
c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO53

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E53.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (64) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
   i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
   ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
   iii. for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of
the outdoor sales, outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E53.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

E53.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

PO54

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

E54

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

i. the overall layout of the development (to scale);

ii. internal road names (where used);

iii. all communal facilities (where provided);

iv. the reception area and on-site manager’s office (where provided);

v. external hydrants and hydrant booster points;

vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:
Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

### Use specific criteria

#### Industrial land uses

**PO56**
Ancillary office⁵³, administration functions, retail sales and customer service components do not compromise the industrial activities in the precinct or compromise the role or function of the region's centres network.

**E56**
The combined area for ancillary office⁵³, administration functions, display and retail sale of commodities, articles or goods resulting from the industrial processes on-site, does not exceed 50% of the GFA.

**PO57**
Buildings directly adjoining non-industrial zoned land:

a. are compatible with the character of the adjoining area;

b. minimises overlooking and overshadowing;

c. maintain privacy; and

d. do not cause significant loss of amenity to neighbouring residents by way noise, vibration, odour, lighting, traffic generation and/or hours of operation.

**PO58**
Medium impact industry⁴⁷ uses only establish in the precinct where:

a. buildings and activities are located at least 250m from a sensitive land use or sensitive zone;

No example provided.
b. do not constrain the function of existing or future uses in the precinct; and  
c. not adversely impact on the amenity, health or safety of adjoining industrial workers or sensitive land uses.

Note - Separation distance is to be measured in a straight-line (in accordance with the State policy)

| PO66 | No example provided. |
With the exception of Caretaker’s accommodation, residential and other sensitive land uses do not establish within the precinct.

**PO67**

Where not located on a district collector, sub-arterial or arterial road, non-industrial uses:

a. provide direct convenience retail or services to the local industrial workforce;
b. are consolidated with existing non-industrial uses;
c. do not compromise the viability, role or function of the region’s centre network;
d. are not subject to adverse amenity impacts or risks to health;
e. do not constrain the operations of industrial activities.

Note - Hazard and Nuisance Mitigation Plan may be required to be submitted to justify compliance with this outcome.

Note - The Road hierarchy is mapped on Overlay map - Road hierarchy

**PO68**

Where located on a district collector, sub-arterial or arterial road, non-industrial uses:

a. are consolidated with existing non-industrial uses;
b. do not compromise the viability, role or function of the region’s centre network;
c. are not subject to adverse amenity impacts or risk to health;
d. do not constrain the operations of industrial activities.

Note - A Hazard and Nuisance Mitigation Plan may be required to be submitted to justify compliance with this outcome.

Note - The Road hierarchy is mapped on Overlay map - Road hierarchy

**PO69**

Traffic generated by non-industrial uses does not detrimentally impact upon the operation and functionality of the receiving road network.

No example provided.
### PO70
The design of non-industrial buildings in the precinct:

- **a.** adds visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, a consistent building line, blank walls that are visible from public places are treated to not negatively impact the surrounding amenity);
- **b.** contribute to a safe environment (e.g. through the use of lighting and avoiding concealed recesses or potential entrapment areas);
- **c.** incorporate architectural features within the building facade at the street level to create human scale (e.g. awnings).
- **d.** are adaptable for future alternative industry uses.

### PO71
Building entrances:

- **a.** are readily identifiable from the road frontage;
- **b.** add visual interest to the streetscape;
- **c.** are designed to limit opportunities for concealment;
- **d.** are located and oriented to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites.

Note - The design provisions for footpaths outlined in Planning scheme policy - Integrated design may assist in demonstrating compliance with this outcome.

### E71.1
The main entrance to the building is clearly visible from and addresses the primary street frontage.

### E71.2
Where the building does not adjoin the street frontage, a dedicated and sealed pedestrian footpath is provided between the street frontage and the building entrance.

### Major electricity infrastructure\(^{(43)}\), Substation\(^{(80)}\) and Utility installation\(^{(66)}\)

### PO72
The development does not have an adverse impact on the visual amenity of a locality and is:

- **a.** high quality design and construction;
- **b.** visually integrated with the surrounding area;
- **c.** not visually dominant or intrusive;
- **d.** located behind the main building line;
- **e.** below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- **f.** camouflaged through the use of colours and materials which blend into the landscape;
- **g.** treated to eliminate glare and reflectivity;
- **h.** landscaped;
- **i.** otherwise consistent with the amenity and character of the zone and surrounding area.

### E72.1
Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- **a.** are enclosed within buildings or structures;
- **b.** are located behind the main building line;
- **c.** have a similar height, bulk and scale to the surrounding fabric;
- **d.** have horizontal and vertical articulation applied to all exterior walls.

### E72.2
A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.
**PO73**

Infrastructure does not have an impact on pedestrian health and safety.

**E73**

Access control arrangements:

a. do not create dead-ends or dark alleyways adjacent to the infrastructure;

b. minimise the number and width of crossovers and entry points;

c. provide safe vehicular access to the site;

d. do not utilise barbed wire or razor wire.

**PO74**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

a. generates no audible sound at the site boundaries where in a residential setting; or

b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**E74**

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**Telecommunications facility**

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

**PO75**

Telecommunications facilities are co-located with existing telecommunications facilities, Utility installation, Major electricity infrastructure or Substation if there is already a facility in the same coverage area.

**E75.1**

New telecommunication facilities are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

**E75.2**

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

**PO76**

A new Telecommunications facility is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

**E76**

A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

**PO77**

Telecommunications facilities do not conflict with lawful existing land uses both on and adjoining the site.

**E77**

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.
**PO78**

The Telecommunications facility\(^{(61)}\) does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;
b. visually integrated with the surrounding area;
c. not visually dominant or intrusive;
d. located behind the main building line;
e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
f. camouflaged through the use of colours and materials which blend into the landscape;
g. treated to eliminate glare and reflectivity;
h. landscaped;
i. otherwise consistent with the amenity and character of the zone and surrounding area.

**E78.1**

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

**E78.2**

In all other areas towers do not exceed 35m in height.

**E78.3**

Towers, equipment shelters and associated structures are of a design, colour and material to:

a. reduce recognition in the landscape;
b. reduce glare and reflectivity.

g. treated to eliminate glare and reflectivity;
h. landscaped;
i. otherwise consistent with the amenity and character of the zone and surrounding area.

**E78.4**

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

**E78.5**

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

**E78.6**

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

*Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.*

*Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.*

**PO79**

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

**E79**

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

**PO80**

**E80**
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

### Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

#### PO81

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;

b. protects the environmental and ecological values and health of receiving waters;

c. protects buildings and infrastructure from the effects of acid sulfate soils.

#### E81

Development does not involve:

a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or

b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

### Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

**Note - Definition for native vegetation is located in Schedule 1 Definitions.**

**Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.**

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

### Vegetation clearing, ecological value and connectivity

| PO82 | Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:
|      | No example provided. |
|      | a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded; |
|      | b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.
|      | * Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014. |

| PO83 | Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:
|      | No example provided. |
|      | a. retaining habitat trees; |
|      | b. providing contiguous patches of habitat; |
c. provide replacement and rehabilitation planting to improve connectivity;

d. avoiding the creation of fragmented and isolated patches of habitat;

e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

between key extractive and processing activities and sensitive, incompatible uses outside the separation area.

- f. Rooming accommodation\(^{(69)}\);
- g. Multiple dwelling\(^{(69)}\);
- h. Non-resident workforce accommodation\(^{(52)}\);
- i. Relocatable home park\(^{(62)}\);
- j. Residential care facility\(^{(65)}\);
- k. Resort complex\(^{(66)}\);
- l. Retirement facility\(^{(67)}\);
- m. Rural workers’ accommodation\(^{(71)}\);
- n. Short-term accommodation\(^{(77)}\);
- o. Tourist park\(^{(84)}\).

### PO96

Habitable rooms achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

### PO97

Development provides open space areas for passive recreation in a manner where impacts from key extractive/processing activities, particularly noise, is minimised.

### E96

All habitable rooms within the separation area are:

- a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;
- b. provided with mechanical ventilation.

### E97

Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

### Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

### PO98

Development:

- a. does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route;
- b. does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
- c. adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
  - i. locating the furthest distance possible from the transportation route;
  - ii. habitable rooms being located the furthest from the transportation route;
  - iii. shielding and screening private outdoor recreation space from the transportation routes.

### PO99

### E98

The following uses are not located within the 100m wide transport route buffer:

- a. Caretaker’s accommodation\(^{(10)}\), except where located in the Extractive industry zone;
- b. Community residence\(^{(16)}\);
- c. Dual occupancy\(^{(21)}\);
- d. Dwelling house\(^{(22)}\);
- e. Dwelling unit\(^{(23)}\);
- f. Hospital\(^{(38)}\);

- l. Resort complex\(^{(66)}\);
- m. Retirement facility\(^{(67)}\);
- n. Rural workers’ accommodation\(^{(71)}\);
- o. Short-term accommodation\(^{(77)}\);
- p. Tourist park\(^{(84)}\).

### E99.1

Consultation Version commencing 22 July 2019

Moreton Bay Regional Council Planning Scheme V5

6 Zones
<table>
<thead>
<tr>
<th>Development:</th>
<th>Development does not create a new vehicle access point onto an Extractive resources transport route.</th>
</tr>
</thead>
</table>
| a. does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route; | **E99.2**
| b. ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility; | A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design. |
| c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard. | |

**Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)**

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

**PO100**

Development will:

a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;

b. protect the fabric and setting of the heritage site, object or building;

c. be consistent with the form, scale and style of the heritage site, object or building;

d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;

e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;

f. retain public access where this is currently provided.

**E100**

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

**PO101**

Demolition and removal is only considered where:

a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or

b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or

No example provided.
c. limited demolition is performed in the course of repairs, maintenance or restoration; or

d. demolition is performed following a catastrophic event which substantially destroys the building or object.

<table>
<thead>
<tr>
<th>PO102</th>
<th>No example provided.</th>

</thead>
</table>

Development does:

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality. Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

- o. Short-term accommodation\(^{(77)}\);
- p. Tourist park\(^{(84)}\).

**PO106**

Habitable rooms within an Electricity supply substation buffer are located a sufficient distance from substations\(^{(80)}\) to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields.

*Note - Habitable room is defined in the Building Code of Australia (Volume 1)*

**E106**

Habitable rooms:

- a. are not located within an Electricity supply substation buffer; and
- b. proposed on a site subject to an Electricity supply substation\(^{(86)}\) are acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.

*Note - Habitable room is defined in the Building Code of Australia (Volume 1)*

**PO107**

Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation\(^{(80)}\) to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

*Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy – Noise.*

*Note - Habitable room is defined in the Building Code of Australia (Volume 1)*

**E108**

Development does not involve the construction of any buildings or structures within a High voltage electricity line buffer.

**PO108**

Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development.

</tbody>
</table>

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.
Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- an overland flow path where it crosses more than one premises;
- inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

Additional criteria for development for a Park

PO117
Development for a Park ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- public benefit and enjoyment is maximised;
- impacts on the asset life and integrity of park structures is minimised;
- maintenance and replacement costs are minimised.

Riparian and wetland setbacks

PO118
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- impact on fauna habitats;
- impact on wildlife corridors and connectivity;
- impact on stream integrity;
- impact of opportunities for revegetation and rehabilitation planting;
- edge effects.

E117
Development for a Park ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

E118
Development does not occur within:

- 50m from top of bank for W1 waterway and drainage line
- 30m from top of bank for W2 waterway and drainage line
- 20m from top of bank for W3 waterway and drainage line
- 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

6 Zones

6.2.7.2 Light industry precinct

6.2.7.2.1 Purpose - Light industry precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Light industry precinct:

   a. A range of industrial activities are established in the precinct which are of a low intensity and scale, with minimal off-site impacts and no adverse impacts on surrounding sensitive land uses.

   b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.

   c. Industrial activities which involve a high level of contact with the general public are located along arterial, sub-arterial and collector roads.

   d. Industrial activities are located, designed and managed to:

      i. maintain the health and safety of people;

      ii. avoid significant adverse effects on the natural environment;

      iii. minimise the possibility of adverse impacts on nearby non-industrial uses.

   e. Development has access to infrastructure and essential services and convenient access to major transport routes.

   f. Non-industrial uses occurring in the precinct:

      i. Do not compromise or constrain the operation or viability of existing or future industrial activities;

      ii. Are subordinate in function and scale to all centres within the region;

      iii. Do not undermine the viability of existing or future centres or neighbourhood hubs;

      iv. Are consolidated to minimise adverse impacts on the efficient functioning of industrial activities;

      v. Provide a convenience service or support role to industries and employees in the precinct; or

      vi. Where not providing a convenience service or support role, development:

         A. Is located on a district collector, sub-arterial or arterial road;

         B. Does not generate large amounts of vehicle traffic during operating hours of industry;

         C. Cannot reasonably be located within a zone suited to the type of development

   g. Development is designed to incorporate sustainable practices, including water sensitive design and energy efficient building design.

   h. The scale, character and built form of development and the resulting streetscape contribute to a high standard of visual and physical amenity and incorporates crime prevention through environmental design (CPTED) principles.

   i. Special industry\(^{(79)}\) does not occur within the precinct.

   j. The continued operation of Places of worship\(^{(60)}\) and Medium impact industries\(^{(47)}\) that were lawfully established at commencement is supported. Any extensions to these uses need to satisfy the outcomes of this code.
k. With the exception of Caretaker’s accommodation, sensitive land uses do not occur within the precinct.

l. General works associated with the development achieves the following:
   i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
   ii. the development manages stormwater to:
      A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
      B. prevent stormwater contamination and the release of pollutants;
      C. maintain or improve the structure and condition of drainage lines and riparian areas;
      D. avoid off-site adverse impacts from stormwater.
   iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
   iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
   v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

m. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

n. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

o. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

p. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
   i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
   ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
   iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
   iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
      A. the provision of replacement, restoration, rehabilitation planting and landscaping;
      B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
      C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:
   A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
   B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
   C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
   D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

q. Development in the Light industry precinct includes one or more of the following:

<table>
<thead>
<tr>
<th>Agricultural supplies store$^2$</th>
<th>Educational establishment$^{24}$ (where for technical and trade related education only)</th>
<th>Medium Impact Industry$^{47}$ (if 250m or greater from a sensitive zone)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Animal husbandry$^4$</td>
<td>Emergency services$^{25}$</td>
<td>Outdoor sales$^{54}$</td>
</tr>
<tr>
<td>Aquaculture$^6$ (where in a building)</td>
<td>Food and drink outlet$^{28}$ (where not exceeding 100m$^2$ GFA)</td>
<td>Research and technology industry$^{64}$</td>
</tr>
<tr>
<td>Bulk landscape supplies$^9$</td>
<td>Hardware and trade supplies$^{32}$</td>
<td>Sales office$^{72}$</td>
</tr>
<tr>
<td>Caretaker's accommodation$^{10}$</td>
<td>Low impact industry$^{42}$</td>
<td>Service Industry</td>
</tr>
<tr>
<td>Car wash$^{11}$</td>
<td></td>
<td>Service station$^{74}$</td>
</tr>
</tbody>
</table>

r. Development in the Light industry precinct does not include any of the following:

| Air services$^3$                | Extractive industry$^{27}$                                                   | Parking station$^{58}$                                                 |
| Animal keeping$^5$              | Food and drink outlet$^{28}$ (where exceeding 100m$^2$ GFA)                 | Permanent plantation$^{59}$                                            |
| Bar$^7$                         |                                                                                 | Relocatable home park$^{62}$                                           |
s. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.2.2 Criteria for assessable development

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part C, Table 6.2.7.2.1 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

Part C—Criteria for assessable development - Light industry precinct

Table 6.2.7.2.1 Assessable development - Light industry precinct
<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site cover is limited to a proportion of a site that ensures:</td>
<td></td>
</tr>
<tr>
<td>a. A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;</td>
<td></td>
</tr>
<tr>
<td>b. Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;</td>
<td></td>
</tr>
<tr>
<td>c. setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;</td>
<td></td>
</tr>
<tr>
<td>d. Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.</td>
<td></td>
</tr>
</tbody>
</table>

**Building height**

**PO2**

The height of buildings is in keeping with the predominant industrial character of the precinct and does not cause adverse amenity impacts on nearby sensitive land uses and zones.

**E2**

Building height does not exceed the maximum height identified on Overlay map - Building heights.

**Setbacks**

**PO3**

Street boundary setbacks:

a. minimise building bulk and visual dominance from the street;

b. provide areas for landscaping at the front of the site;

c. allow for customer parking to be located at the front of the building;

d. Provide opportunities for dense landscaping to screen at maturity any visibility of development of a site from the Bruce Highway.

**E3**

Buildings maintain a minimum setback of:

a. 6m to the primary frontage (other than the Bruce Highway);

b. 3m to the secondary frontage;

c. 10m to a boundary adjoining the Bruce Highway.

**PO4**

Side and rear boundary setbacks maintain views, privacy, access to natural light and the visual amenity of adjoining sensitive land uses.

**E4**

Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m.
<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.</td>
</tr>
</tbody>
</table>

**Building appearance and design**

**PO5**

Where fronting a district collector, sub-arterial or arterial road, or visible from a Park[^57], or a centre zoned lot, buildings provide a high level of architectural design which adds visual interest to the streetscape and reduces the perceived bulk of the building, by incorporating:

a. a range of building materials, colours and features;
b. facade articulation along street frontages;
c. design features to promote customer entry points;
d. materials that are not highly reflective.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy

Note - The following example illustrates an acceptable design response to this outcome.

![Building example](image)

**PO6**

Buildings on highly visible corner allotments:

a. address both frontages;

No example provided.
### Performance outcomes

<table>
<thead>
<tr>
<th></th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>b.</td>
<td>contain building openings facing both frontages;</td>
</tr>
<tr>
<td>c.</td>
<td>do not present blank unarticulated walls to either frontage.</td>
</tr>
</tbody>
</table>

Note - The following example illustrates an acceptable design response to this outcome.

### Staff recreation area

**PO7**

Staff are provided with adequate and amenable break/dining facilities to suit the nature of the activities on-site.

**E7**

Where the nature of the activities on-site do not allow staff to eat in their work environment, the development provides an on-site recreation area for staff that:

- a. includes adequate seating, tables and rubbish bins for the number of staff onsite;
- b. is adequately protected from the weather;
- c. is safely accessible to all staff;
- d. is separate and private from public areas;
- e. is located away from a noisy or odorous activity.

### Landscaping

**PO8**

Landscaping is provided on the site to:

- a. visually soften the built form, areas of hardstand, storage areas and mechanical plant associated with the on-site activities;

**E8**

Landscaping is provided and maintained in accordance with Planning scheme policy - Integrated design.
<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>b. complement the existing or desired streetscape;</td>
<td></td>
</tr>
<tr>
<td>c. minimise the impact of industrial development on adjoining lots not zoned for industrial purposes.</td>
<td></td>
</tr>
</tbody>
</table>

**Fencing**

**PO9**

The provision of fencing on street frontages does not dominate the streetscape or create safety issues.

Note - The following example illustrates an acceptable design response to this outcome.

![Fencing Example](image)

**E9**

Where fencing is provided on the street frontage, fence sections between columns or posts have a minimum transparency of 70% spread evenly across its total surface area.

**Public access**

**PO10**

The use has a safe, clearly identifiable public access separated from service and parking areas.

Note - The following diagram illustrates an acceptable design response to this outcome.

**E10.1**

Pedestrian linkages are provided from the street and customer car parking areas directly to the main entrance of the building.

**E10.2**

Note - The following diagram illustrates an acceptable design response to this outcome.
<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
</table>

The public access is separated from industrial service areas.

### Movement network

**PO**

Development is designed to connect to and form part of the surrounding neighbourhood by providing interconnected street, pedestrian and cyclist pathways to adjoining development, nearby centres, neighbourhood hubs, community facilities, public transport nodes and open space.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

**E**

Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

**E**

For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above example.

### Car parking

**PO11**

Car parking is provided on-site to meet the anticipated demand of employees and visitors and avoid adverse impacts on the external road network.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

**E11**

Car parking is provided in accordance with Schedule 7 - Car parking.

**PO12**

The design of car parking areas:

**E12**

All car parking areas are designed and constructed in accordance with Australian Standard AS 2890.1 Parking facilities Part 1: Off-street car parking.
<table>

</tr>
</tbody>
</table>

### Bicycle parking and end of trip facilities

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

#### PO13

**a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:**

i. adequate bicycle parking and storage facilities; and  

ii. adequate provision for securing belongings; and  

iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.

**b. Notwithstanding a, there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:**

i. the projected population growth and forward planning for road upgrading and development of cycle paths; or  

ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or  

iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

**E13.1**

Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

**E13.2**

Bicycle parking is:

1. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;  
2. protected from the weather by its location or a dedicated roof structure;  
3. located within the building or in a dedicated, secure structure for residents and staff;  
4. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an...
Performance outcomes

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council’s assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the examples under this heading meet the current performance requirement prescribed in the Queensland Development Code.

Examples that achieve aspects of the Performance Outcomes

amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E13.3

For non-residential uses, storage lockers:

a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E13.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>

<tbody>
<tr>
<td>provided thereafter</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:

i. a mirror located above each wash basin;

ii. a hook and bench seating within each shower compartment;

iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

### Loading and servicing

**PO14**

Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads.

Note - If landscaping is proposed for screening purposes, refer to Planning scheme policy - Integrated design for determining acceptable levels.

No example provided.

### Waste

**PO15**

Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy - Waste. Area/s are designed, located and managed to prevent amenity impacts on the locality.

No example provided. **E15**

Development is designed to meet the criteria in the Planning scheme policy - Waste and is demonstrated in a waste management program.

### Hazardous Chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

### PO20

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

### E20.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

#### Dangerous Dose

a. For any hazard scenario involving the release of gases or vapours:
   i. AEGL2 (60 minutes) or if not available ERPG2;
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
   i. 7kPa overpressure;
   ii. 4.7kW/m2 heat radiation.

If criteria E21.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10^-6/year.
<table>
<thead>

</tbody>
</table>
Safe access is provided for all vehicles required to access the site.

Site access and driveways are designed and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. Where for a Council-controlled road and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

**E33.2**

Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. AS/NZS2890.1 Parking Facilities Part 1: - Off street car parking

b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

**E33.3**

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

<td></td>
</tr>
</tbody>
</table>
b. safe and convenient pedestrian and cycle movement;
c. adequate on street parking;
d. stormwater drainage paths and treatment facilities;
e. efficient public transport routes;
f. utility services location;
g. emergency access and waste collection;
h. setting and approach (streetscape, landscaping and street furniture) for adjoining residences;
i. expected traffic speeds and volumes; and
j. wildlife movement.

Note - Preliminary road design (including all services, street lighting; stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO:

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.

PO34
Upgrade works (whether trunk or non-trunk) are provided where necessary to:

a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
b. ensure the orderly and efficient continuation of the active transport network;
c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport

Note - To demonstrate compliance with e. of this performance outcome site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

E
No example provided.

New intersections onto existing roads are designed to accommodate traffic volumes and traffic movements taken from a date 10 years from the date of completion of the last stage of the development. Detailed design is to be in accordance with Planning scheme policy - Integrated design.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.

E
Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy - Operational works inspection; maintenance and bonding procedures.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.
The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m2 Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m2 GFA;
- Warehouses and Industry greater than 6000m2 GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissects or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.
PO

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

E

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

<table>
<thead>
<tr>

</tbody>
</table>

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (i.e., left in/left out only) at intersections with sub-arterial roads or arterial roads.
**PO**

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.

- Frontage roads include streets where no direct lot access is provided.
- The road network is mapped on Overlay map - Road hierarchy.
- The Primary and Secondary active transport network is mapped on Overlay map - Active transport.
- Roads are considered to be constructed in accordance with Council's standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**E**

Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only; OR Frontage road sealed but not constructed* to Planning scheme policy - Integrated design standard; OR Frontage road partially constructed* to Planning scheme policy - Integrated design standard.</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width containing near side parking lane (if required), cycle lane (if required), 2 travel lanes plus 1.5m wide (full depth pavement) gravel shoulder and table drainage to the opposite side. The minimum total travel lane width is: 6m for minor roads; 7m for major roads.</td>
</tr>
</tbody>
</table>

Note - Major roads are sub-arterial roads and arterial roads. Minor roads are roads that are not major roads.

- Construction includes all associated works (services, street lighting and linemarking).
- Alignment within road reserves is to be agreed with Council.
- Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the

Where development:

a. is for an urban purpose that involves a land area 2500m² or greater in size; and
b. results in 6 or more dwellings; or  
c. results in an impervious area greater than 25% of the net developable area,

stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.

Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be design in accordance with Planning scheme policy - Integrated Design (Appendix C).

PO38

Easements for drainage purposes are provided over:

a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;

b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

Stormwater drainage pipes and structures through or within private land (including inter-allotment drainage) are protected by easements in favour of Council with sufficient area for practical access for maintenance purposes.

Note - In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council’s stormwater drainage system.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.

Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.

Note - A Traffic Management Plan may be required to demonstrate compliance with this PO. A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

Note - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less, and:

a. the aggregate volume of imported or exported material is greater than 1000m³; or
b. the aggregate volume of imported or exported material is greater than 200m³ per day; or
c. the proposed haulage route involves a vulnerable land use or shopping centre.
### Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO:

Editor's note - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

### Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Note - A dilapidation report may be required to demonstrate compliance with this E.

### E

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.

### E

Access to the development site is obtained via an existing lawful access point.

### PO43

All disturbed areas are **to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised** at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

### E43

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. **grassed** stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

### PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

### E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.
**PO44**

The clearing of vegetation on-site:

a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and

b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;

c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

**E44.1**

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

**E44.2**

Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

**PO**

All development works are carried out at times which minimise noise impacts to residents:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

**E**

All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

**PO45**

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities,

No example provided.
the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

### Earthworks

**PO46**

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- a. the natural topographical features of the site;
- b. short and long-term slope stability;
- c. soft or compressible foundation soils;
- d. reactive soils;
- e. low density or potentially collapsing soils;
- f. existing fill and soil contamination that may exist on-site;
- g. the stability and maintenance of steep rock slopes and batters;
- h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note: Filling or excavation works are to be completed within six months of the commencement date.

**E46.1**

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**E46.2**

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

**E46.3**

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

**E46.4**

All filling or excavation is contained on-site and is free draining.

**E46.5**

All fill placed on-site is:

- a. limited to that area required for the necessary for the approved use;
- b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill).

**E46.6**

The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

<td>PO50</td>
</tr>
<tr>
<td>Development Filling or excavation does not result in:</td>
<td>No example provided.</td>
</tr>
</tbody>
</table>
a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;
b. increased flood inundation outside the site;
c. any reduction in the flood storage capacity in the floodway;
d. and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

### Filling and excavation

Filling or excavation on the development site is undertaken in a manner which does not:

a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
b. redirect stormwater surface flow away from existing flow paths; or
c. divert stormwater surface flow onto adjacent land, (other than a road), in a manner which:
   i. concentrates the flow; or
   ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
   iii. causes actionable nuisance to any person, property or premises.

### Retaining walls and structures

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

### Earth retaining structures

Earth retaining structures:

a. are not constructed of boulder rocks or timber;
b. where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary:

Figure – Retaining on boundary
c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;

d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal; terraced; landscaped and drained as shown below.

Figure—Cut

Figure—Fill
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

   OR

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;

c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

   i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

   ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

E

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise's current occupancy and use;

c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

### Table 6.2.7.2.2

**Fire Services**

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales, outdoor processing or outdoor storage where involving combustible materials.
AND

b. none of the following exceptions apply:

   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or

   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO52

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E52.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (54) and development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2(a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2(b), (c) and (d), with the exception that:

   i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;

   ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;

   iii. for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;

   d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

E52.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

## E62.1

Only goods grown, produced or manufactured on-site are sold from the site.

## E62.2

Display of goods grown, produced or manufactured on-site are contained within a dwelling or on-site structure and the display of goods is not visible from the boundary of the site.

### Other Non-industrial land uses

#### PO63

Showrooms\(^{(78)}\) are limited to:

- a. Lots with frontages to district collectors, sub-arterial and arterial roads;
- b. Industry and trade related product lines;
- c. A gross floor area of 500m\(^2\)

Note - Industry and trade related products are considered to be products used by the industry and trades in creating an end product. Example may include:

- Kitchen and bathroom showrooms\(^{(78)}\) (i.e. Fixtures, plumbing supplies, bench tops, etc)
- Flooring showrooms\(^{(78)}\) (i.e. Tiles, carpet, hardwood flooring supplies)
- Electrical showrooms\(^{(78)}\)
- Building and construction products

#### PO64

Food and Drink Outlets\(^{(28)}\) are limited to a gross floor area of 100m\(^2\).

#### PO65

With the exception of Caretaker's accommodation\(^{(10)}\), residential and other sensitive land uses do not establish within the precinct.

#### PO66

Non-industrial uses:

- a. are consolidated with existing non-industrial uses in the precinct;
- b. do not compromise the viability, role or function of the region's centre network;
c. are not subject to adverse amenity impacts or risk to health from industrial activities;

d. do not constrain the function or viability of existing or future industrial activities in the surrounding area.

Note - The submission of a Hazard and Nuisance Mitigation Plan may be required to justify compliance with this outcome.

<table>
<thead>
<tr>
<th>PO67</th>
<th>Where located on a local collector or access street, non-industrial uses provide only direct convenience or support services to the industrial workforce.</th>

</tr>
</tbody>
</table>

| E70.1 | The main entrance to the building is clearly visible from and addresses the primary street frontage. |

| E70.2 | Where the building does not adjoin the street frontage, a dedicated and sealed pedestrian footpath is provided between the street frontage and the building entrance. |
Note - The design provisions for footpaths outlined in Planning scheme policy - Integrated design may assist in demonstrating compliance with this outcome.

Major electricity infrastructure\(^{(43)}\), Substation\(^{(80)}\) and Utility installation\(^{(86)}\)

**PO71**

The development does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- c. not visually dominant or intrusive;
- d. located behind the main building line;
- e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- f. camouflaged through the use of colours and materials which blend into the landscape;
- g. treated to eliminate glare and reflectivity;
- h. landscaped;
- i. otherwise consistent with the amenity and character of the zone and surrounding area.

E71.1

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- a. are enclosed within buildings or structures;
- b. are located behind the main building line;
- c. have a similar height, bulk and scale to the surrounding fabric;
- d. have horizontal and vertical articulation applied to all exterior walls.

E71.2

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

**PO72**

Infrastructure does not have an impact on pedestrian health and safety.

E72

Access control arrangements:

- a. do not create dead-ends or dark alleyways adjacent to the infrastructure;
- b. minimise the number and width of crossovers and entry points;
- c. provide safe vehicular access to the site;
- d. do not utilise barbed wire or razor wire.

**PO73**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

- a. generates no audible sound at the site boundaries where in a residential setting; or
- b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

E73

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

**Telecommunications facility\(^{(81)}\)**

Editor's note - In accordance with the Federal legislation Telecommunications facilities\(^{(81)}\) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

**PO74**

E74.1
Telecommunications facilities (81) are co-located with existing telecommunications facilities (81), Utility installation (86) Major electricity infrastructure (43) or Substation (80) if there is already a facility in the same coverage area.

New telecommunication facilities (81) are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

<table>
<thead>
<tr>

<tr>
<td><strong>E77.5</strong></td>
</tr>
<tr>
<td><strong>E77.6</strong></td>
</tr>
</tbody>
</table>

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

**PO78**

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

**E78**

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

**PO79**

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

**E79**

All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

**Values and constraints criteria**

Note - The relevant values and constraint criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)**

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

**PO80**

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

**E80**

Development does not involve:
a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
b. protects the environmental and ecological values and health of receiving waters;
c. protects buildings and infrastructure from the effects of acid sulfate soils.

### Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

### Vegetation clearing, ecological value and connectivity

**PO81**

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area

No example provided.
and a Value Offset Area is maintained and not lost or degraded;

b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

**PO82**

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;

b. providing contiguous patches of habitat;

c. provide replacement and rehabilitation planting to improve connectivity;

d. avoiding the creation of fragmented and isolated patches of habitat;

e. providing wildlife movement infrastructure.

Editor’s note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

**Vegetation clearing and habitat protection**

**PO83**

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No example provided.

**PO84**

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

| PO85 | Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:
| a. providing contiguous patches of habitat;
b. avoiding the creation of fragmented and isolated patches of habitat;
c. providing wildlife movement infrastructure;
d. providing replacement and rehabilitation planting to improve connectivity. |
| No example provided. |

| Vegetation clearing and soil resource stability |

| PO86 | Development does not:
| a. result in soil erosion or land degradation;
b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner. |
| No example provided. |

| Vegetation clearing and water quality |

| PO87 | Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:
| a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
b. avoiding or minimising changes to landforms to maintain hydrological water flows;
c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry\(^4\) and animal keeping\(^5\) activities. |
| No example provided. |

| PO88 | Development minimises adverse impacts of stormwater run-off on water quality by:
| a. minimising flow velocity to reduce erosion;
b. minimising hard surface areas;
c. maximising the use of permeable surfaces;
d. incorporating sediment retention devices;
e. minimising channelled flow. |
| No example provided. |

<p>| Vegetation clearing and access, edge effects and urban heat island effects |</p>
<table>

<th>Development</th>
<th>E97</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development:</td>
<td>The following uses are not located within the 100m wide transport route buffer:</td>
</tr>
<tr>
<td>a. does not increase in the number of people living in close proximity to a transport route and being</td>
<td></td>
</tr>
</tbody>
</table>
subject to the adverse effects from the transportation route;
b. does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
c. adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
   i. locating the furthest distance possible from the transportation route;
   ii. habitable rooms being located the furthest from the transportation route;
   iii. shielding and screening private outdoor recreation space from the transportation routes.

PO98
Development:
   a. does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route;
   b. ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility;
   c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

E98.1
Development does not create a new vehicle access point onto an Extractive resources transport route.

E98.2
A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO99
Development will:
   a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
   b. protect the fabric and setting of the heritage site, object or building;
   c. be consistent with the form, scale and style of the heritage site, object or building;
   d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;

E99
Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **e.** incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;  
**f.** retain public access where this is currently provided. |   |
| **PO100**  
Demolition and removal is only considered where:  
**a.** a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or  
**b.** demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or  
**c.** limited demolition is performed in the course of repairs, maintenance or restoration; or  
**d.** demolition is performed following a catastrophic event which substantially destroys the building or object. | No example provided. |
| **PO101**  
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view. | No example provided. |
| **PO102**  
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality. Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome. |   |
| **E102**  
Development does:  
**a.** not result in the removal of a significant tree;  
**b.** not occur within 20m of a protected tree;  
**c.** involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees. |   |
| **Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)** |   |
| **PO103**  
Odour sensitive development is separated from Wastewater treatment plants so they are not adversely affected by odour emission or other air pollutant impacts. |   |
| **E103**  
The following uses are not located within a wastewater treatment site buffer:  
**a.** Caretaker’s accommodation\(^{10}\);  
**b.** Community residence\(^{16}\);  
**c.** Dual occupancy\(^{21}\); |   |

| Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.  

Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy – Noise.  

Note - Habitable room is defined in the Building Code of Australia (Volume 1) | |

<table>
<thead>
<tr>
<th>PO106</th>
<th>E106</th>
</tr>
</thead>
</table>
| Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development:  
a. is located and designed to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields in accordance with the principle of prudent avoidance; | Development does not involve the construction of any buildings or structures within a High voltage electricity line buffer. |
b. is located and designed in a manner that maintains a high level of security of supply;
c. is located and design so not to impede upon the functioning and maintenance of high voltage electrical infrastructure.

PO107
Development within a Pumping station buffer is located, designed and constructed to:

a. ensure that odour or other air pollutant impacts on the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008;
b. ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.

E107
Development does not involve the construction of any buildings or structures within a Pumping station buffer.

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

PO108
Development:

a. minimises the risk to persons from overland flow;
b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.

PO109
Development:

a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;
b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.

PO110
No example provided.
### Development does not:

a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level;
b. increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.

Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.

### PO111

Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.

### E111

Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.

### PO112

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

### E112

Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.

### PO113

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

### E113.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- a. Urban area – Level III;
- b. Rural area – N/A;
- c. Industrial area – Level V;
- d. Commercial area – Level V.

### E113.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

### PO114

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a. a stormwater pipe if the nominal pipe diameter exceeds 300mm;

No example provided.
b. an overland flow path where it crosses more than one premises;
c. inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

**Additional criteria for development for a Park**

**PO115**

Development for a Park ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

a. public benefit and enjoyment is maximised;
b. impacts on the asset life and integrity of park structures is minimised;
c. maintenance and replacement costs are minimised.

**Riparian and wetland setbacks**

**PO116**

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

a. impact on fauna habitats;
b. impact on wildlife corridors and connectivity;
c. impact on stream integrity;
d. impact of opportunities for revegetation and rehabilitation planting;
e. edge effects.

**E115**

Development for a Park ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

**E116**

Development does not occur within:

a. 50m from top of bank for W1 waterway and drainage line
b. 30m from top of bank for W2 waterway and drainage line
c. 20m from top of bank for W3 waterway and drainage line
d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
Figure - Burpengary east Light Industry Precinct
6.2.7.3 General industry precinct

6.2.7.3.1 Purpose - General industry precinct

1. The purpose of the code will be achieved through the following overall outcomes for the General industry precinct:
   
   a. A range of industrial uses and supporting activities are established which are of a scale or intensity where the possibility of adverse impacts on sensitive receptors requires a location sufficiently buffered from incompatible activities.
   
   b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.
   
   c. Development is located, designed and managed to:
      
      i. maintain the health and safety of people;
      
      ii. avoid significant adverse effects on the natural environment;
      
      iii. minimise the possibility of adverse impacts on surrounding non-industrial uses.
   
   d. Development has access to infrastructure and essential services and convenient access to major transport routes.
   
   e. Development is designed to incorporate sustainable practices where possible, including water sensitive design and energy efficient building design.
   
   f. The scale, character and built form of development and the resulting streetscape contribute to a high standard of visual and physical amenity and incorporates crime prevention through environmental design (CPTED) principles.
   
   g. Non-industrial uses occurring in the precinct:
      
      i. Do not compromise or constrain the operation or viability of existing or future industrial activities;
      
      ii. Are subordinate in function and scale to all centres with in the region;
      
      iii. Do not undermine the viability of existing or future centres or neighbourhood hubs;
      
      iv. Are consolidated to minimize adverse impacts on the efficient functioning of industrial activities;
      
      v. Provide a convenience service or support roll to industries and employees within the precinct only.
   
   h. Low impact industry\(^{(42)}\), Service industry\(^{(73)}\) and Warehouse\(^{(88)}\) activities:
      
      i. provide a supporting function to industries in the precinct, or are of a scale and intensity where the off-site impacts of the activity are similar to that of Medium impact industry\(^{(47)}\);
      
      ii. are not detrimentally affected by the operations of existing or future industrial activities in the precinct;
      
      iii. do not compromise the operations of existing or future industrial activities in the precinct.
   
   i. High impact industry\(^{(34)}\) activities only establish in the precinct where:

Note - An Economic Impact Assessment may be required to demonstrate compliance with part of the outcome/s above. Refer to Planning scheme policy - Economic impact assessment for information required.
i. there is a minimum separation distance of 500m from an existing or approved sensitive land use or sensitive zone;

ii. it can be demonstrated that the use will operate without adverse impacts on the surrounding area.

j. Special industry\(^{(79)}\) does not establish within the precinct.

k. Stand alone Offices do not establish within the precinct;

l. Sensitive land uses, including all forms of residential development, do not occur within the precinct.

m. General works associated with the development achieves the following:

i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);

ii. the development manages stormwater to:
   A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
   B. prevent stormwater contamination and the release of pollutants;
   C. maintain or improve the structure and condition of drainage lines and riparian areas;
   D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;

iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

n. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, dust, electromagnetic interference, odour, particles or smoke.

o. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

p. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

q. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
   A. the provision of replacement, restoration, rehabilitation planting and landscaping;
   B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
   C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;
vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;

B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;

C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;

D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

r. Development in the General industry precinct includes one or more of the following:

- Agricultural supplies store\(^{(2)}\)
- Animal husbandry\(^{(4)}\)
- Bulk landscape supplies\(^{(9)}\)
- Caretaker’s accommodation\(^{(10)}\)
- Emergency services\(^{(25)}\)
- Food and drink outlet\(^{(28)}\)
  (where does not exceed 100m\(^2\) GFA)
- Medium impact industry\(^{(47)}\)
- Research and technology industry\(^{(64)}\)
- Sales office\(^{(72)}\)
- Warehouse\(^{(88)}\)

s. Development in the General industry precinct does not include any of the following:

- Air services\(^{(3)}\)
- Animal keeping\(^{(5)}\)
- Bar\(^{(7)}\)
- Brothel\(^{(8)}\)
- Cemetery\(^{(12)}\)
- Community care centre\(^{(15)}\)
- Community residence\(^{(16)}\)
- Community use\(^{(17)}\)
- Cropping\(^{(19)}\)
- Detention facility\(^{(20)}\)
- Dual occupancy\(^{(21)}\)
- Dwelling house\(^{(22)}\)
- Garden centre\(^{(31)}\)
- Hardware and trade supplies\(^{(32)}\)
- Hospital\(^{(36)}\)
- Hotel\(^{(37)}\)
- Indoor sport and recreation\(^{(38)}\)
- Intensive animal industry\(^{(39)}\)
- Intensive horticulture\(^{(40)}\)
- Landing\(^{(41)}\)
- Major sport, recreation and entertainment facility\(^{(44)}\)
- Market\(^{(46)}\)
- Permanent plantation\(^{(59)}\)
- Place of worship\(^{(66)}\)
- Relocatable home park\(^{(62)}\)
- Residential care facility\(^{(65)}\)
- Resort complex\(^{(66)}\)
- Retirement facility\(^{(67)}\)
- Roadside stall\(^{(68)}\)
- Rooming accommodation\(^{(69)}\)
- Rural industry\(^{(70)}\)
- Rural workers’ accommodation\(^{(71)}\)
- Short-term accommodation\(^{(77)}\)
t. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.3.2 Criteria for assessable development

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part D, Table 6.2.7.3.1 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

Part D—Criteria for assessable development - General industry precinct

Table 6.2.7.3.1 Assessable development - General industry precinct

<table>
<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Site cover</strong></td>
<td></td>
</tr>
</tbody>
</table>

**PO1**

Site cover is limited to a proportion of a site that ensures:

a. A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;

b. Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;

No example provided.
c. setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;

d. Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.

<table>
<thead>
<tr>
<th>Building height</th>
</tr>
</thead>
<tbody>
<tr>
<td>PO2</td>
</tr>
<tr>
<td>The height of buildings is in keeping with the predominant industrial character of the precinct and does not cause adverse amenity impacts on surrounding sensitive land uses and zones.</td>
</tr>
</tbody>

<tr>
<td>c. minimise the impact of industrial development on adjoining lots not zoned for industrial purposes.</td>
<td></td>
</tr>
</tbody>
</table>

### Fencing

**PO8**

The provision of fencing on street frontages does not dominate the streetscape or create safety issues.

Note - The following example illustrates an acceptable design response to this outcome.

**E8**

Where fencing is provided on the street frontage, fence sections between columns or posts have a minimum transparency of 70% spread evenly across its total surface area.

### Public access

**PO9**

The use has a safe, clearly identifiable public access separated from service and parking areas.

Note - The following diagram illustrates an acceptable design response to this outcome.

**E9.1**

Pedestrian linkages are provided from the street and customer car parking areas directly to the main entrance of the building.

**E9.2**
The public access is separated from industrial service areas.

Movement network

PO
Development maintains, contributes to or provides for interconnected street, pedestrian and cyclist networks.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

E
Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

E
For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above example.

Car parking

PO10
Car parking is provided on-site to meet the anticipated demands of employees and visitors and avoid adverse impacts on the external road network.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

PO11
The design of car parking areas:

a. does not impact on the safety of the external road network;

E10
Car parking is provided in accordance with Schedule 7 - Car parking.

E11
All car parking areas are designed and constructed in accordance with Australian Standard AS 2890.1 Parking facilities Part 1: Off-street car parking.
b. ensures the safety of pedestrians at all times;
c. ensures the safe movement of vehicles within the site.

**Bicycle parking and end of trip facilities**

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

**PO12**

a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

   i. adequate bicycle parking and storage facilities; and
   
   ii. adequate provision for securing belongings; and

   iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.

b. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

   i. the projected population growth and forward planning for road upgrading and development of cycle paths; or
   
   ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or

   iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

**E12.1**

Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

**E12.2**

Bicycle parking is:

a. provided in accordance with Austroads (2008), *Guide to Traffic Management - Part 11: Parking*;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

**E12.3**
trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the examples under this heading meet the current performance requirement prescribed in the Queensland Development Code.

For non-residential uses, storage lockers:

a. are provided at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E12.4

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/ Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>

<td>2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
<tr>
<td></td>
<td>Male</td>
<td>1</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>1 urinal and 1 closet pan, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).
d. are provided with:
   i. a mirror located above each wash basin;
   ii. a hook and bench seating within each shower compartment;
   iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

<table>

</table>

**E16**
Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.

Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day

### Noise

**PO17**

Noise generating uses do not adversely affect existing or potential noise sensitive uses.

**Note** - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

**Note** - A noise impact assessment may be required to demonstrate compliance with this outcome. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

### PO18

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- **a.** contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- **b.** maintaining the amenity of the streetscape.

**Note** - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

**Note** - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

**E18.1**

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

**E18.2**

Noise attenuation structures (e.g. walls, barriers or fences):

- **a.** are not visible from an adjoining road or public area unless:
  - i. adjoining a motorway or rail line; or
  - ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- **b.** do not remove existing or prevent future active transport routes or connections to the street network;
- **c.** are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

**Note** - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

**Note** - Refer to Overlay map – Active transport for future active transport routes.
### Hazardous Chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Terms used in this section are defined in State 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

<table>
<thead>
<tr>
<th>E19.1</th>
<th>Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Dangerous Dose</strong></td>
<td></td>
</tr>
<tr>
<td>a.</td>
<td>For any hazard scenario involving the release of gases or vapours:</td>
</tr>
<tr>
<td>i.</td>
<td>AEGL2 (60 minutes) or if not available ERPG2;</td>
</tr>
<tr>
<td>ii.</td>
<td>An oxygen content in air &lt;19.5% or &gt;23.5% at normal atmospheric pressure.</td>
</tr>
<tr>
<td>b.</td>
<td>For any hazard scenario involving fire or explosion:</td>
</tr>
<tr>
<td>i.</td>
<td>7kPa overpressure;</td>
</tr>
<tr>
<td>ii.</td>
<td>4.7kW/m² heat radiation.</td>
</tr>
</tbody>
</table>

If criteria E20.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10⁻⁶/year.

<table>
<thead>
<tr>
<th>E19.2</th>
<th>Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Dangerous Dose</strong></td>
<td></td>
</tr>
<tr>
<td>a.</td>
<td>For any hazard scenario involving the release of gases or vapours:</td>
</tr>
<tr>
<td>i.</td>
<td>AEGL2 (60 minutes) or if not available ERPG2;</td>
</tr>
<tr>
<td>ii.</td>
<td>An oxygen content in air &lt;19.5% or &gt;23.5% at normal atmospheric pressure.</td>
</tr>
<tr>
<td>b.</td>
<td>For any hazard scenario involving fire or explosion:</td>
</tr>
</tbody>
</table>
### E20

If criteria E20.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of $5 \times 10^{-6}$/year.

#### E19.3

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

**Dangerous Dose**

- **a.** For any hazard scenario involving the release of gases or vapours:
  - i. AEGL2 (60 minutes) or if not available ERPG2;
  - ii. An oxygen content in air $<19.5\%$ or $>23.5\%$ at normal atmospheric pressure.

- **b.** For any hazard scenario involving fire or explosion:
  - i. 14 kPa overpressure;
  - ii. 12.6 kW/m² heat radiation.

If criteria E20.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of $50 \times 10^{-6}$/year.

---

### PO20

Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

### E20

Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.

### PO21

Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

### E21

Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.
Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government “flood hazard area” are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively:

- bulk tanks are anchored so they cannot float if submerged or inundated by water; and
- tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

**E22.2**

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

### Emissions into Brisbane operational airspace

**PO23**

Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport’s operational airspace.

Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport’s operational airspace.

**E23.1**

Development does not emit a gaseous plume into the airport’s operational airspace at a velocity exceeding 4.3m per second.

**E23.2**

Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

### Clearing of habitat trees where not located within the Environmental areas overlay map

**PO24**

- Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

- Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.

- Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

No example provided.

</table>
E32.2

Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. AS/NZS 2890.1 Parking Facilities Part 1: – Off street car parking;

b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

E32.3

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

Access driveways, manoeuvring areas and loading facilities are constructed with reinforced concrete road pavements. Concrete is to be designed in accordance with rigid road pavement design principles.

Note - Pavements are to be designed by an RPEQ.

E

Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO

Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor’s Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

E

Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.
### Street design and layout

<table>
<thead>
<tr>
<th>PO</th>
<th>No example provided</th>
</tr>
</thead>
</table>

Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:

- **a.** access to premises by providing convenient vehicular movement for residents between their homes and the major road network;
- **b.** safe and convenient pedestrian and cycle movement;
- **c.** adequate on street parking;
- **d.** stormwater drainage paths and treatment facilities;
- **e.** efficient public transport routes;
- **f.** utility services location;
- **g.** emergency access and waste collection;
- **h.** setting and approach (streetscape, landscaping and street furniture) for adjoining residences;
- **i.** expected traffic speeds and volumes; and
- **j.** wildlife movement.

Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.

Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.
PO

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- ensure the orderly and efficient continuation of the active transport network;
- ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with a. of this performance outcome, site frontages works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or

ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.

Note - An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;

E

No example provided.

New intersections onto existing roads are designed to accommodate traffic volumes and traffic movements taken from a date 10 years from the date of completion of the last stage of the development. Detailed design is to be in accordance with Planning scheme policy - Integrated design.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.

E

Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

Note - Existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.

E

The active transport network is extended in accordance with Planning scheme policy - Integrated design.
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m² Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m² GFA;
- Warehouses and Industry greater than 6000m² GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissect or significantly impact on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

**PO**

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

**E**

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**E**

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. where the through road provides an access function;
   i. intersecting road located on the same side = 60 metres;
   ii. intersecting road located on opposite side (Left Right Stagger) = 60 metres;
   iii. intersecting road located on opposite side (Right Left Stagger) = 40 metres.

b. Where the through road provides a collector or sub-arterial function:
i. intersecting road located on the same side = 100 metres;  
ii. intersecting road located on opposite side (Left Right Stagger) = 100 metres;  
iii. intersecting road located on opposite side (Right Left Stagger) = 60 metres.  

Where the through road provides an arterial function:  
i. intersecting road located on the same side = 300 metres;  
ii. intersecting road located on opposite side (Left Right Stagger) = 300 metres;  
iii. intersecting road located on opposite side (Right Left Stagger) = 300 metres;  

Walkable block perimeter does not exceed 1000 metres.  

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (ie. left in/left out only) at intersections with sub-arterial roads or arterial roads.  

Note - The road network is mapped on Overlay map - Road hierarchy. 

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO. Intersection spacing will be determined based on the deceleration and queue storage distances required for the intersection after considering vehicle speed and present/forecast turning and through volumes.

PO  

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.  

Note - Frontage roads include streets where no direct lot access is provided.  

Note - The road network is mapped on Overlay map - Road hierarchy. 

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

E  

Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following: 

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only; OR</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width</td>
</tr>
</tbody>
</table>
### Frontage Road

**Note - Roads are considered to be constructed in accordance with Council's standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.**

<table>
<thead>
<tr>
<th>Frontage road sealed but not constructed* to Planning scheme policy - Integrated design standard;</th>
<th>Frontage road partially constructed* to Planning scheme policy - Integrated design standard;</th>

<td>• 6m for minor roads;</td>
<td>• 6m for minor roads;</td>
</tr>
<tr>
<td>• 7m for major roads;</td>
<td>• 7m for major roads;</td>
</tr>
</tbody>
</table>

**Note - Major roads are sub-arterial roads and arterial roads. Minor roads are roads that are not major roads.**

**Note - Construction includes all associated works (services, street lighting and linemarking).**

**Note - Alignment within road reserves is to be agreed with Council.**

**Note - “Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.”**

### Stormwater

**PO**

Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient.

**E**

The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design.

**E**

Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM.

**E**

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM.
<table>
<thead>
<tr>
<th>PO</th>
<th>E</th>
</tr>
</thead>
<tbody>
<tr>
<td>Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment.</td>
<td>The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site.</td>
</tr>
<tr>
<td>The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots.</td>
<td></td>
</tr>
<tr>
<td>Overland flow paths from roads and public open space areas do not pass through private lots. Drainage pathways are provided to accommodate overland flows from roads and public open space areas.</td>
<td></td>
</tr>
<tr>
<td>The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel. Note - Refer to QUDM for recommended average flow velocities.</td>

<tr>
<td>Levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.</td>
<td></td>
</tr>
</tbody>
</table>

| **PO35** | **No example provided.**  
Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.  
Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome. |

| **PO36** | **No example provided.**  
Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 2 of the SPP.  
Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.  
**Where development:**  
a. is for an urban purpose that involves a land area 2500m² or greater in size; and  
b. results in 6 or more dwellings; or  
c. results in an impervious area greater than 25% of the net developable area;  
stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.  
Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning Scheme Policy - Stormwater Management. Stormwater quality infrastructure is to be design in accordance with Planning scheme policy - Integrated Design (Appendix C). |

| **PO37** | **E  
No example provided.**  
Easements for drainage purposes are provided over: |
Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land (including inter-allotment drainage) is protected by easements in favour of Council. Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225m diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</td>
</tr>
</tbody>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning Scheme Policy - Integrated Design (Appendix C) for easement requirements over open channels.

PO

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

No example provided.

Site works and construction management

PO38

The site and any existing structures are maintained in a tidy and safe condition.

No example provided.

PO39

All works on-site are managed to:

a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;

b. minimise as far as possible, impacts on the natural environment;

E39.1

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash removal devices designed in accordance with the Urban Stormwater Quality Planning Guidelines, State Planning Policy, Schedule 10 - Stormwater management design objectives, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
<p>| | |</p>
<table>
<thead>
<tr>

</tr>
<tr>
<td>g.</td>
<td>ponding or concentration of stormwater does not occur in adjoining properties.</td>
</tr>
</tbody>
</table>

**E39.2**

Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

**E39.3**

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

**E39.4**

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree:

Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.
<table>
<thead>
<tr>
<th>Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.</th>

<td></td>
</tr>
</tbody>
</table>
### PO42

All disturbed areas are **to be progressively stabilised during construction and the entire site rehabilitated and substantially stabilised** at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

### E42

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. **grassed** stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

### PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).

### E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

### PO43

The clearing of vegetation on-site:

a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and

b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;

c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

### E43.1

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

### E43.2

Disposal of materials is managed in one or more of the following ways:
**PO**

**All development works are carried out at times which minimise noise impacts to residents:**

- a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;
- b. no work is to be carried out on Sundays or public holidays.

*Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.*

**PO44**

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

*No example provided.*

**Earthworks**

**PO45**

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- a. the natural topographical features of the site;
- b. short and long-term slope stability;
- c. soft or compressible foundation soils;
- d. reactive soils;
- e. low density or potentially collapsing soils;

**E45.1**

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**E45.2**

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

**E45.3**

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.
<p>| | |</p>

<tbody>
<tr>
<td><strong>E45.4</strong></td>
<td>All filling or excavation is contained on-site and is free draining.</td>
</tr>
</tbody>
</table>

E45.5
All fill placed on-site is:

- limited to that area required for the necessary for the approved use;
- clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.

E45.6
The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**PO46**
Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

**E46**
Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

*Figure* - Embankment

**PO47**
Filling or excavation is undertaken in a manner that:

**E47.1**
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>

</tr>
<tr>
<td></td>
<td>Note - Public sector entity is defined in Schedule 2 of the Act, Sustainable Planning Act 2009.</td>
</tr>
</tbody>
</table>

**E47.2**

Filling or excavation that would result in any of the following is not carried out on-site:

a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Schedule 2 of the Act, Sustainable Planning Act 2009.

**PO48**

Filling or excavation does not result in land instability.

Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

No example provided.

**PO49**

Development Filling or excavation does not result in:

a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;

b. increased flood inundation outside the site;

c. any reduction in the flood storage capacity in the floodway;

d. any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

No example provided.

**PO**

Filling and excavation undertaken on the development site are shaped in a manner which does not:
<table>

|                                | d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal; terraced, landscaped and drained as shown below. |

|                                | **Figure—Cut** |

Filling or excavation on the development site is undertaken in a manner which does not create or accentuate problems associated with stormwater flows and drainage systems on land adjoining the site.

- prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
- redirect stormwater surface flow away from existing flow paths; or
- divert stormwater surface flow onto adjacent land, (other than a road), in a manner which:
  - concentrates the flow; or
  - increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
  - causes actionable nuisance to any person; property or premises.
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;
c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;
d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:
i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or
ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements;

E

Retaining walls are designed and certified by a RPEQ so that:
a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;
b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;
c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO51

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E51.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:

i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;

ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;

iii. for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of...
the outdoor sales\textsuperscript{(54)}, outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

**E51.2**

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

**E51.3**

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

**PO52**

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

**E52**

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

i. the overall layout of the development (to scale);

ii. internal road names (where used);

iii. all communal facilities (where provided);

iv. the reception area and on-site manager’s office (where provided);

v. external hydrants and hydrant booster points;

vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

<td>No example provided.</td>
</tr>
</tbody>
</table>
### PO57

Low impact industry\(^{\text{(42)}}\) or Service industry\(^{\text{(73)}}\) activities:

- are only located on the periphery of the precinct;
- are only located on Collector, Sub-arterial or Arterial roads;
- do not constrain the function or viability of existing and future industrial uses in the precinct;
- do not generate excessive non-industrial traffic.

Note - Refer to Overlay map - Road hierarchy for road classifications.

### PO58

High impact industry\(^{\text{(34)}}\) activities:

- are located at least 500m from a sensitive land use or sensitive zone;
- do not compromise the function or viability of existing and future industrial uses in the precinct;
- do not adversely impact on the amenity, health or safety of adjoining industrial workers or sensitive land uses.

### PO59

Non-industrial components of buildings (including offices and retail areas) are to be located at the road frontage to assist in activating the frontage and designed as high quality architectural features incorporating entry area elements such as forecourts, awnings and the architectural treatment of roof lines and fascias.

### Home based business\(^{\text{(35)}}\)

### PO60

Home based business(s)\(^{\text{(35)}}\):

- is subordinate in size and function to the primary use on the site being residential;
- are of a scale and intensity that does not result in adverse visual or nuisance impacts on the residents in adjoining or nearby dwellings;
- results in a vehicular and pedestrian traffic generation consistent with that reasonably expected in the surrounding area;
<p>| | |</p>

<td>provides a minimum 16m² of private open space directly accessible from a habitable room;</td>
</tr>
<tr>
<td>d.</td>
<td>provides car parking in accordance with Schedule 7 - Car parking.</td>
</tr>
</tbody>
</table>

**Sales office** (72)

**PO63**

Sales office (72) remain temporary in duration and demonstrates a relationship to the land or buildings being displayed or sold.

**E63**

A Sales office (72) is located on the site for no longer than 2 years.

**Other Non-industrial uses**

**PO64**

With the exception of Caretaker's accommodation (10), residential and other sensitive land uses do not establish within the precinct.

**PO65**

No example provided.
Non-industrial uses:

a. are consolidated with existing non-industrial uses in the precinct;

b. do not compromise the viability, role or function of the region's centres network;

c. are not subject to adverse amenity impacts, or risk to health from industrial activities;

d. do not constrain the function or viability of existing or future industrial activities in the surrounding area;

e. are not located on Collector or Local roads.

Note - The submission of a Hazard and Nuisance Mitigation Plan may be required to justify compliance with this outcome.

Note - Refer to Overlay map - Road hierarchy for road classifications.

d. located behind the main building line;  
e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;  
f. camouflaged through the use of colours and materials which blend into the landscape;  
g. treated to eliminate glare and reflectivity;  
h. landscaped;  
i. otherwise consistent with the amenity and character of the zone and surrounding area.

E73.2
In all other areas towers do not exceed 35m in height.

E73.3
Towers, equipment shelters and associated structures are of a design, colour and material to:

a. reduce recognition in the landscape;  
b. reduce glare and reflectivity.

E73.4
All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

E73.5
The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

E73.6
A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

PO74
Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

E74
An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

PO75
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

E75
All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.
Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

PO76

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;

b. protects the environmental and ecological values and health of receiving waters;

c. protects buildings and infrastructure from the effects of acid sulfate soils.

E76

Development does not involve:

a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or

b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;

b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

b. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.
### Vegetation clearing, ecological value and connectivity

**PO77**  
Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- **a.** the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- **b.** on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

**PO78**  
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- **a.** retaining habitat trees;
- **b.** providing contiguous patches of habitat;
- **c.** provide replacement and rehabilitation planting to improve connectivity;
- **d.** avoiding the creation of fragmented and isolated patches of habitat;
- **e.** providing wildlife movement infrastructure.

Editor’s note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.
## Vegetation clearing and habitat protection

### PO79

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No example provided.

### PO80

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

- a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
- b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
- c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

No example provided.

### PO81

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

- a. providing contiguous patches of habitat;
- b. avoiding the creation of fragmented and isolated patches of habitat;
- c. providing wildlife movement infrastructure;
- d. providing replacement and rehabilitation planting to improve connectivity.

No example provided.

## Vegetation clearing and soil resource stability

### PO82

Development does not:

- a. result in soil erosion or land degradation;
- b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

No example provided.

## Vegetation clearing and water quality

### PO83

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

No example provided.
- ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
- avoiding or minimising changes to landforms to maintain hydrological water flows;
- adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry\(^4\) and animal keeping\(^5\) activities.

**PO84**

Development minimises adverse impacts of stormwater run-off on water quality by:

- minimising flow velocity to reduce erosion;
- minimising hard surface areas;
- maximising the use of permeable surfaces;
- incorporating sediment retention devices;
- minimising channelled flow.

**Vegetation clearing and access, edge effects and urban heat island effects**

**PO85**

Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

**PO86**

Development minimises potential adverse ‘edge effects’ on ecological values by:

- providing dense planting buffers of native vegetation between a development and environmental areas;
- retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- restoring, rehabilitating and increasing the size of existing patches of native vegetation;
- ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

**PO87**

No example provided.
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

a. pervious surfaces;
b. providing deeply planted vegetation buffers and green linkage opportunities;
c. landscaping with local native plant species to achieve well-shaded urban places;
d. increasing the service extent of the urban forest canopy.

**Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets**

**PO88**

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

**Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following assessment criteria apply)**

Note - To demonstrate achievement of the performance outcomes, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing noise impact assessment report is provided in Planning scheme policy – Noise.

**PO89**

Development does not increase the number of people living in the Extractive Resources separation area.

**E89**

One dwelling house\(^{(22)}\) permitted per lot within separation area.

**PO90**

Development:

a. does not introduce or increase uses that are sensitive to the impacts of an Extractive industry\(^{(27)}\);
b. is compatible with the operation of an Extractive industry\(^{(27)}\);
c. does not comprise or undermine the function and integrity of the separation area in providing a buffer between key extractive and processing activities and sensitive, incompatible uses outside the separation area.

**E90**

Development within the separation area does not include the following activities:

a. Caretaker's accommodation\(^{(10)}\);
b. Community residence\(^{(16)}\);
c. Dual occupancy\(^{(21)}\);
d. Dwelling unit\(^{(23)}\);
e. Hospital\(^{(36)}\);
f. Rooming accommodation\(^{(69)}\);
g. Multiple dwelling\(^{(48)}\);
h. Non-resident workforce accommodation\(^{(52)}\);
i. Relocatable home park\(^{(62)}\);
j. Residential care facility\(^{(65)}\);
k. Resort complex\(^{(66)}\);
l. Retirement facility\(^{(67)}\);
m. Rural workers’ accommodation\(^{(71)}\).
Habitable rooms achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

Development provides open space areas for passive recreation in a manner where impacts from key extractive/processing activities, particularly noise, is minimised.

Development does not create a new vehicle access point onto an Extractive resources transport route.

Development does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route;
to achieve a high degree of safety, having good visibility;
c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

### Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a heritage impact assessment report prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree Assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

</table>
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

**PO98**
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree’s health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree’s state of health is required to demonstrate achievement of this performance outcome.

**E98**
Development does:

a. not result in the removal of a significant tree;

b. not occur within 20m of a protected tree;

c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees.

---

### Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

**PO99**
Odour sensitive development is separated from Wastewater treatment plants so they are not adversely affected by odour emission or other air pollutant impacts.

**E99**
The following uses are not located within a wastewater treatment site buffer:

a. Caretaker’s accommodation\(^{(10)}\);

b. Community residence\(^{(16)}\);

c. Dual occupancy\(^{(21)}\);

d. Dwelling house\(^{(22)}\);

e. Dwelling unit\(^{(23)}\);

f. Hospital\(^{(36)}\);

g. Rooming accommodation\(^{(69)}\);

h. Multiple dwelling\(^{(49)}\);

i. Non-resident workforce accommodation\(^{(52)}\);

### Additional criteria for development for a Park\(^{(57)}\)

**PO112**

Development for a Park\(^{(57)}\) ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

a. public benefit and enjoyment is maximised;

b. impacts on the asset life and integrity of park structures is minimised;

c. maintenance and replacement costs are minimised.

**PO113**

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

a. impact on fauna habitats;

b. impact on wildlife corridors and connectivity;

c. impact on stream integrity;

d. impact of opportunities for revegetation and rehabilitation planting;

e. edge effects.

**E112**

Development for a Park\(^{(57)}\) ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

**E113**

Development does not occur within:

a. 50m from top of bank for W1 waterway and drainage line

b. 30m from top of bank for W2 waterway and drainage line

c. 20m from top of bank for W3 waterway and drainage line

d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
6.2.7.4 Restricted industry precinct

6.2.7.4.1 Purpose - Restricted industry precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Restricted industry precinct:
   a. A range of industrial activities are established in the precinct which are of a scale and intensity where the potential of adverse impacts on sensitive receptors requires a location significantly separated from incompatible activities.
   b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.
   c. Industrial development is located, designed and managed to:
      i. maintain the health and safety of people;
      ii. avoid significant adverse effects on the natural environment;
      iii. minimise the possibly of adverse impacts on surrounding non-industrial uses.
   d. Development has access to infrastructure and essential services and convenient access to major transport networks.
   e. Development is designed to incorporate sustainable practices where possible, including water sensitive design and energy efficient building design.
   f. Development achieves a high standard of industrial design and incorporates crime prevention through environmental design (CPTED) principles.
   g. High impact industry activities do not result in detriment or danger to other development in the locality.
   h. Development that is able to be accommodated in other locations does not establish in this precinct and reduce the limited supply of land available in this precinct.
   i. Special industry does not establish within the precinct.
   j. Extensions to existing Special industry do not increase the scale and intensity of the use.
   k. With the exception of Caretaker’s accommodation, sensitive land uses, including all forms of residential development, do not occur within the precinct.
   l. General works associated with the development achieves the following:
      i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
      ii. the development manages stormwater to:
         A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
         B. prevent stormwater contamination and the release of pollutants;
         C. maintain or improve the structure and condition of drainage lines and riparian areas;
         D. avoid off-site adverse impacts from stormwater.
      iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
      iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
      v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
m. Development does not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

n. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

o. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

p. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
   i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
   ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
   iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
   iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
      A. the provision of replacement, restoration, rehabilitation planting and landscaping;
      B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
      C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
   v. protecting native species and protecting and enhancing species habitat;
   vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
   vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
   viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
   ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
   x. where located in an overland flow path:
      A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
      B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
      C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
      D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

q. Development in the Restricted industry precinct includes one or more of the following:

<table>
<thead>
<tr>
<th>Research and technology industry&lt;sup&gt;(64)&lt;/sup&gt;</th>

r. Development in the Restricted industry precinct does not include any of the following:
- Adult store<sup>(1)</sup>
- Agricultural supplies store<sup>(2)</sup>
- Air services<sup>(3)</sup>
- Animal keeping<sup>(5)</sup>
- Aquaculture<sup>(6)</sup>
- Bar<sup>(7)</sup>
- Brothel<sup>(8)</sup>
- Bulk landscape supplies<sup>(9)</sup>
- Cemetery<sup>(12)</sup>
- Child care centre<sup>(13)</sup>
- Club<sup>(14)</sup>
- Community care centre<sup>(15)</sup>
- Community residence<sup>(16)</sup>
- Community use<sup>(17)</sup>
- Cropping<sup>(19)</sup>
- Detention facility<sup>(20)</sup>
- Dual occupancy<sup>(21)</sup>
- Dwelling house<sup>(22)</sup>
- Dwelling unit<sup>(23)</sup>
- Educational establishment<sup>(24)</sup>
- Environment facility<sup>(26)</sup>
- Extractive industry<sup>(27)</sup>
- Food and drink outlet<sup>(28)</sup>
- Function facility<sup>(29)</sup>
- Funeral parlour<sup>(30)</sup>
- Garden centre<sup>(31)</sup>
- Hardware and trade supplies<sup>(32)</sup>
- Health care services<sup>(33)</sup>
- Home based business<sup>(35)</sup>
- Hospital<sup>(36)</sup>
- Hotel<sup>(37)</sup>
- Indoor sport and recreation<sup>(36)</sup>
- Intensive animal industry<sup>(39)</sup>
- Intensive horticulture<sup>(40)</sup>
- Landing<sup>(41)</sup>
- Low impact industry<sup>(42)</sup>
- Major electricity infrastructure<sup>(43)</sup>
- Major sport, recreation and entertainment facility<sup>(44)</sup>
- Market<sup>(46)</sup>
- Motor sport facility<sup>(48)</sup>
- Multiple dwelling<sup>(49)</sup>
- Nature-based tourism<sup>(50)</sup>
- Nightclub entertainment facility<sup>(51)</sup>
- Non-resident workforce accommodation<sup>(52)</sup>
- Office<sup>(53)</sup>
- Outdoor sales<sup>(54)</sup>
- Outdoor sport and recreation<sup>(55)</sup>
- Parking station<sup>(58)</sup>
- Permanent plantation<sup>(59)</sup>
- Place of worship<sup>(60)</sup>
- Relocatable home park<sup>(62)</sup>
- Renewable energy facility<sup>(63)</sup>
- Residential care facility<sup>(65)</sup>
- Resort complex<sup>(66)</sup>
- Retirement facility<sup>(67)</sup>
- Roadside stall<sup>(68)</sup>
- Rooming accommodation<sup>(69)</sup>
- Rural industry<sup>(70)</sup>
- Rural workers’ accommodation<sup>(71)</sup>
- Sales office<sup>(72)</sup>
- Shop<sup>(75)</sup>
- Short-term accommodation<sup>(77)</sup>
- Showroom<sup>(78)</sup>
- Special industry<sup>(79)</sup>
- Theatre<sup>(82)</sup>
- Tourist attraction<sup>(83)</sup>
- Tourist park<sup>(84)</sup>
- Veterinary services<sup>(87)</sup>
- Warehouse<sup>(88)</sup>
- Wholesale nursery<sup>(89)</sup>
- Winery<sup>(90)</sup>

s. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

### 6.2.7.4.2 Criteria for assessable development
Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part E, Table 6.2.7.4.1 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

**Part E—Criteria for assessable development - Restricted industry precinct**

**Table 6.2.7.4.1 Assessable development - Restricted industry precinct**

<thead>
<tr>
<th>Performance outcomes</th>
<th>Examples that achieve aspects of the Performance Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General criteria</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Site cover</strong></td>
<td></td>
</tr>
<tr>
<td>PO1</td>
<td>Site cover is limited to a proportion of a site that ensures:</td>
</tr>
<tr>
<td></td>
<td>a. A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;</td>
</tr>
<tr>
<td></td>
<td>b. Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;</td>
</tr>
<tr>
<td></td>
<td>c. setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;</td>
</tr>
<tr>
<td></td>
<td>d. Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.</td>
</tr>
<tr>
<td></td>
<td>No example provided.</td>
</tr>
<tr>
<td><strong>Building height</strong></td>
<td></td>
</tr>
<tr>
<td>PO2</td>
<td>The height of buildings is in keeping with the predominant industrial character of the precinct and does not cause adverse amenity impacts on surrounding sensitive land uses and zones.</td>
</tr>
<tr>
<td></td>
<td>E2 Building height does not exceed the maximum height identified on Overlay map - Building heights.</td>
</tr>
<tr>
<td><strong>Setbacks</strong></td>
<td></td>
</tr>
<tr>
<td>PO3</td>
<td>Street boundary setbacks:</td>
</tr>
<tr>
<td></td>
<td>a. minimise building bulk and visual dominance from the street;</td>
</tr>
<tr>
<td></td>
<td>b. provide areas for landscaping at the front of the site;</td>
</tr>
<tr>
<td></td>
<td>E3 Buildings maintain a minimum setback of:</td>
</tr>
<tr>
<td></td>
<td>a. 6m to the primary frontage (other than the Bruce Highway);</td>
</tr>
<tr>
<td></td>
<td>b. 3m to the secondary frontage;</td>
</tr>
</tbody>
</table>
c. allow for customer parking to be located at the front of the building;
d. Provide opportunities for dense landscaping to screen at maturity any visibility of development of a site from the Bruce Highway.

c. 5m to land not included in the Industry zone;
d. 10m to a boundary adjoining the Bruce Highway.

**PO4**
Side and rear boundary setbacks maintain views, privacy, access to natural light and the visual amenity of adjoining sensitive land uses.

**E4**
Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m.

*Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.*

**Building appearance and design**

**PO5**
Where fronting an arterial or sub-arterial road, or visible from a Park[67] or centre zoned lot, buildings provide a high level of architectural design which adds visual interest to the streetscape and reduces the perceived bulk of the building, by incorporating:

a. a range of building materials, colours and features;
b. facade articulation along street frontages;
c. design features to promote customer entry points;
d. materials that are not highly reflective.

**No example provided.**

**Staff recreation area**

**PO6**
Staff are provided with adequate and amenable break/dining facilities to suit the nature of the activities on-site.

**E6**
Where the nature of the activities on-site do not allow staff to eat in their work environment, the development provides an on-site recreation area for staff that:

a. Includes adequate seating, tables and rubbish bins for the number of staff on-site;
b. is adequately protected from the weather;
c. is safely accessible to all staff;
d. is separate and private from public areas;
e. is located away from a noisy or odorous activity.

**Landscaping**

**PO7**

**E7**
Landscaping is provided on-site to:

a. visually soften the built form, areas of hardstand, storage areas and mechanical plant associated with the on-site processes;
b. complement the existing or desired streetscape;
c. minimise the impact of industrial development on adjoining lots not zoned for industrial purposes.

<table>
<thead>
<tr>
<th>Fencing</th>
</tr>
</thead>
<tbody>
<tr>
<td>PO8</td>
</tr>
<tr>
<td>The provision of fencing on street frontages does not dominate the streetscape or create safety issues.</td>
</tr>
<tr>
<td>Note - The following example illustrates an acceptable design response to this outcome.</td>
</tr>
</tbody>
</table>

| E8 |
| Where fencing is provided on the street frontage, fence sections between columns or posts have a minimum transparency of 70% spread evenly across its total surface area. |

<table>
<thead>
<tr>
<th>Public access</th>
</tr>
</thead>
<tbody>
<tr>
<td>PO9</td>
</tr>
<tr>
<td>The use has a safe, clearly identifiable public access separated from service and parking areas.</td>
</tr>
<tr>
<td>Note - The following diagram illustrates an acceptable design response to this outcome.</td>
</tr>
</tbody>
</table>

| E9.1          |
| Pedestrian linkages are provided from the street and customer car parking areas directly to the main entrance of the building. |

| E9.2          |
The public access is separated from industrial service areas.

### Movement network

**PO**

Development maintains, contributes to or provides for interconnected street, pedestrian and cyclist networks.

*Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.*

**E**

Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.

*Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.*

**E**

For areas not shown on a movement figure located in Appendix A of Planning scheme policy - Neighbourhood design, no example provided.

*Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above example.*

### Car parking

**PO10**

Car parking is provided on-site to meet the anticipated demands of employees and visitors and avoid adverse impacts on the external road network.

*Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.*

**E10**

Car parking is provided in accordance with Schedule 7 - Car parking.

**PO11**

The design of car parking areas:

a. does not impact on the safety of the external road network;

**E11**

All car parking areas are designed and constructed in accordance with AS 2890.1 *Parking facilities Part 1: Off-street car parking.*
b. ensures the safety of pedestrians at all times;
c. ensures the safe movement of vehicles within the site.

### Bicycle parking and end of trip facilities

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

**PO12**

a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

i. adequate bicycle parking and storage facilities; and

ii. adequate provision for securing belongings; and

iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.

b. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

i. the projected population growth and forward planning for road upgrading and development of cycle paths; or

ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or

iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of

### E12.1

Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

### E12.2

Bicycle parking is:

a. provided in accordance with Austroads (2008), *Guide to Traffic Management - Part 11: Parking*;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

### E12.3
trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the examples under this heading meet the current performance requirement prescribed in the Queensland Development Code.

For non-residential uses, storage lockers:

a. are provided at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

**E12.4**

For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;

b. are fitted with a lockable door or otherwise screened from public view;

c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/ Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-5 Male and female</td>
<td>1 unisex change room</td>
<td>1</td>
<td>1 closet pan</td>
<td>1</td>

<td>1 closet pan</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>Female</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Male</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>1 urinal and 1 closet pan, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).
are provided with:

i. a mirror located above each wash basin;

ii. a hook and bench seating within each shower compartment;

iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

</tbody>
</table>
Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day.

### Noise

**PO17**

Noise generating uses do not adversely affect existing or potential noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this outcome. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

**PO18**

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);

b. maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

**E18.1**

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

**E18.2**

Noise attenuation structures (e.g. walls, barriers or fences):

a. are not visible from an adjoining road or public area unless:

   i. adjoining a motorway or rail line; or

   ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.

b. do not remove existing or prevent future active transport routes or connections to the street network;

c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.
Hazardous Chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Terms used in this section are defined in State 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

<table>

</tbody>
</table>

If criteria E20.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazardous scenario shall not exceed an individual fatality risk level of 0.5 x 10⁻⁶/year.

E19.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

a. For any hazard scenario involving the release of gases or vapours:

   i. AEGL2 (60 minutes) or if not available ERPG2;
   
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
**E19.3**

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

**Dangerous Dose**

a. For any hazard scenario involving the release of gases or vapours:
   i. AEGL2 (60 minutes) or if not available ERPG2;
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
   i. 14kPa overpressure;
   ii. 12.6kW/m² heat radiation.

If criteria E20.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10⁻⁶/year.

</tbody>
</table>

<table>
<thead>
<tr>
<th>PO22</th>
<th>E22.1</th>
</tr>
</thead>
</table>
Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government “flood hazard area” are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively:

a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and

b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

E22.2

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

Emissions into Brisbane operational airspace

PO23

Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport’s operational airspace.

Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport’s operational airspace.

E23.1

Development does not emit a gaseous plume into the airport’s operational airspace at a velocity exceeding 4.3m per second.

E23.2

Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

Clearing of habitat trees where not located within the Environmental areas overlay map

PO24

a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.

c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

No example provided.
Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

| **E32.2** | |

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.
Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking;

b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8; Service vehicle requirements), pavement widths and construction.

E32.3

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

E

Access driveways, manoeuvring areas and loading facilities are constructed with reinforced concrete road pavements. Concrete is to be designed in accordance with rigid road pavement design principles.

Note - Pavements are to be designed by an RPEQ.

E

Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO

Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor's Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

E

Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.
<table>

**Street layout and design**

**PO**

**Streets are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. The street design and construction accommodates the following functions:**

- a. access to premises by providing convenient vehicular movement for residents between their homes and the major road network;
- b. safe and convenient pedestrian and cycle movement;
- c. adequate on street parking;
- d. stormwater drainage paths and treatment facilities;
- e. efficient public transport routes;
- f. utility services location;
- g. emergency access and waste collection;
- h. setting and approach (streetscape, landscaping and street furniture) for adjoining residences;
- i. expected traffic speeds and volumes; and
- j. wildlife movement.

**Note - Preliminary road design (including all services, street lighting, stormwater infrastructure, access locations, street trees and pedestrian network) may be required to demonstrate compliance with this PO.**

**Note - Refer to Planning scheme policy - Environmental areas and corridors for examples of when and where wildlife movement infrastructure is required.**
**PO33**

**Upgrade works (whether trunk or non-trunk) are provided where necessary to:**

a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;

b. ensure the orderly and efficient continuation of the active transport network;

c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy—Integrated design.

*Note—An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy—Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy—Integrated transport assessment.*

*Note—The road network is mapped on Overlay map—Road hierarchy.*

*Note—The primary and secondary active transport network is mapped on Overlay map—Active transport.*

*Note—To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:*

i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or–

ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy—Integrated Design can be achieved in the existing reserve.

*Note—Refer to Planning scheme policy—Integrated design for road network and active transport network design standards.*

**The existing road network (whether trunk or non-trunk) is upgraded where necessary to cater for the impact from the development.**

*Note—An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy—Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:*

- Development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;

- Forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;

- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;

---

**E**

**No example provided:**

New intersections onto existing roads are designed to accommodate traffic volumes and traffic movements taken from a date 10 years from the date of completion of the last stage of the development. Detailed design is to be in accordance with Planning scheme policy—Integrated design.

*Note—All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.*

*Note—Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.*

**E**

**Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy—Operational works inspection, maintenance and bonding procedures.**

*Note—All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.*

*Note—Existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.*

**E**

**The active transport network is extended in accordance with Planning scheme policy—Integrated design:**
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m² Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;
- Showroom, Shop or Shopping centre greater than 1,000m² GFA;
- Warehouses and Industry greater than 6000m² GFA;
- On-site carpark greater than 100 spaces;
- Development has a trip generation rate of 100 vehicles or more within the peak hour;
- Development which dissect or significantly impact on an environmental area or an environmental corridor.

The ITA is to review the development’s impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment’s impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

**PO**

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

**E**

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**E**

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. where the through road provides an access function;
   i. intersecting road located on the same side = 60 metres;
   ii. intersecting road located on opposite side (Left Right Stagger) = 60 metres;
   iii. intersecting road located on opposite side (Right Left Stagger) = 40 metres.

b. Where the through road provides a collector or sub-arterial function:
i. intersecting road located on the same side = 100 metres;

ii. intersecting road located on opposite side (Left Right Stagger) = 100 metres;

iii. intersecting road located on opposite side (Right Left Stagger) = 60 metres.

c. Where the through road provides an arterial function:

i. intersecting road located on the same side = 300 metres;

ii. intersecting road located on opposite side (Left Right Stagger) = 300 metres;

iii. intersecting road located on opposite side (Right Left Stagger) = 300 metres;

d. Walkable block perimeter does not exceed 1000 metres.

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (ie. left in/left out only) at intersections with sub-arterial roads or arterial roads.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO. Intersection spacing will be determined based on the deceleration and queue storage distances required for the intersection after considering vehicle speed and present/forecast turning and through volumes.

PO

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m.

Note - Frontage roads include streets where no direct lot access is provided.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

E

Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only;</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width</td>
</tr>
</tbody>
</table>
**Frontage road sealed but not constructed**

- Planning scheme policy - Integrated design standard;

**OR**

- Frontage road partially constructed* to Planning scheme policy - Integrated design standard.

Note - Roads are considered to be constructed in accordance with Council’s standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - Roads are sub-arterial roads and arterial roads. Minor roads are roads that are not major roads.

Note - Construction includes all associated works (services, street lighting and linemarking).

Note - Alignment within road reserves is to be agreed with Council.

Note - “Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

---

**Stormwater**

**PO**

Minor stormwater drainage systems (internal and external) have the capacity to convey stormwater flows from frequent storm events for the fully developed upstream catchment whilst ensuring pedestrian and vehicular traffic movements are safe and convenient.

**E**

The capacity of all minor drainage systems are designed in accordance with Planning scheme policy - Integrated design.

**E**

Stormwater pipe network capacity is to be calculated in accordance with the Hydraulic Grade Line method as detailed in Australian Rainfall and Runoff or QUDM.

**E**

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the relevant level as identified in QUDM.
<table>
<thead>

</tbody>
</table>
Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land (including inter-allotment drainage) is protected by easements in favour of Council. Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225m diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</td>
</tr>
</tbody>
</table>

*Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.*

*Note - Refer to Planning Scheme Policy - Integrated Design (Appendix C) for easement requirements over open channels.*

**PO**

Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

**Site works and construction management**

**PO38**

The site and any existing structures are maintained in a tidy and safe condition.

**PO39**

All works on-site are managed to:

a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;

b. minimise as far as possible, impacts on the natural environment;

**E39.1**

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash removal devices designed in accordance with the Urban Stormwater Quality Planning Guidelines, State Planning Policy, Schedule 10 - Stormwater management design objectives, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
6 Zones

c. ensure stormwater discharge is managed in a manner that does not cause actionable nuisance or annoyance to any person or premises;
d. avoid adverse impacts on street trees and their critical root zone.

b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion of any kind;
c. stormwater discharge rates do not exceed pre-existing conditions;
d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and
e. the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins;
f. minimum design storm for all temporary diversion drains and sedimentation basins in accordance with Schedule 10 - Stormwater management design objectives;
g. ponding or concentration of stormwater does not occur in adjoining properties.

E39.2
Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

E39.3
The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

E39.4
Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree:

Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

**PO41**

All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

**E41.1**

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**E41.2**

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

**E41.3**

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

**E**

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

**E**

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.
### PO42

All disturbed areas are **to be progressively stabilised during construction and the entire site** rehabilitated and substantially stabilised at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

### E42

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. **grassed** stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

### PO

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ECP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).

### E

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

### PO43

The clearing of vegetation on-site:

a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and

b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;

c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

### E43

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

### E43.2

Disposal of materials is managed in one or more of the following ways:
a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

**PO**

All development works are carried out at times which minimise noise impacts to residents.

**E**

All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;

b. no work is to be carried out on Sundays or public holidays.

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

**PO44**

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

No example provided.

**Earthworks**

**PO45**

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

a. the natural topographical features of the site;

b. short and long-term slope stability;

c. soft or compressible foundation soils;

d. reactive soils;

e. low density or potentially collapsing soils;

**E45.1**

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

**E45.2**

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

**E45.3**
f. existing fill and soil contamination that may exist on-site;
g. the stability and maintenance of steep rock slopes and batters;
h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note - Filling or excavation works are to be completed within six months of the commencement date.

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

E45.4
All filling or excavation is contained on-site and is free draining.

E45.5
All fill placed on-site is:
a. limited to that area required for the necessary for the approved use;
b. clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill).

E45.6
The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

PO46
Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

E46
Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Figure - Embankment

PO47
Filling or excavation is undertaken in a manner that:

E47.1
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

### Retaining walls and structures

**PO50**

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

**Note** - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.

**E50**

**Earth-retaining structures:**

<p>| | |</p>

</tr>
</tbody>
</table>

**Figure—Cut**
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;
c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

PO
All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

E
Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;
c. where the adjoining land use rights or zoning allows for industrial uses a minimum live load of 25kPA must be allowed in the design of the retaining structure for these adjoining premises.

Note - Retaining walls will only be approved following submission of a full detailed design certified by a RPEQ.

Fire Services

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park \(^{(84)}\) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales \(^{(54)}\), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO51

Development incorporates a fire fighting system that:

a. satisfies the reasonable needs of the fire fighting entity for the area;

b. is appropriate for the size, shape and topography of the development and its surrounds;

c. is compatible with the operational equipment available to the fire fighting entity for the area;

d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

e. considers the fire hazard inherent in the surrounds to the development site;

f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

E51.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks \(^{(84)}\) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g), and (h) and as well as Appendix B of AS 2419.1 (2005);

c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:

i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;

ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;

iii. for outdoor sales \(^{(54)}\), processing or storage facilities, hydrant coverage is required across the entire area of
E51.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;
b. an unobstructed height of no less than 4.8m;
c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

E51.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

PO52

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

E52

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or
b. a sign identifying the following is provided at the vehicular entry point to the site:
   i. the overall layout of the development (to scale);
   ii. internal road names (where used);
   iii. all communal facilities (where provided);
   iv. the reception area and on-site manager’s office (where provided);
   v. external hydrants and hydrant booster points;
   vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:
PO53
Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

E53
For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

### Use specific criteria

#### Industrial Land Uses

**PO54**
Ancillary office, administration functions, retail sales, showroom and customer service components do not compromise the primary use of the site or other industrial activities in the precinct, or affect the viability, role or function of the region's centres network.

**E54**
The combined area of ancillary non-industrial activities, including but not limited to administration and retail functions, does not exceed 10% of the GFA or 200m², whichever is the lesser.

**PO55**
High impact industry uses maintain a minimum separation of at least 500m from a sensitive land use.

Note - Separation distance is to be measured in a straight line, in accordance with the State policy.

**PO56**
Special industry uses do not establish within the restricted industry precinct.

No example provided.

**PO57**
Uses that can be readily accommodated within other zones or precincts do not compromise the availability of land within the restricted industry precinct.

No example provided.
Note - Low impact industry (42), Medium impact industry (47), Service industry (73), and Warehouse (86) land uses are considered to be able to be readily accommodated within other precincts of the Industry Zone.

### Caretaker's accommodation (10)

**PO58**

Development of Caretaker's accommodation (10):

a. does not compromise the productivity of the use occurring on-site and in the surrounding area;

b. is domestic in scale;

c. provides adequate car parking provisions exclusive on the primary use of the site;

d. is safe for the residents;

e. has regard to the open space and recreation needs of the residents.

**E58**

Caretaker's accommodation (10):

a. has a maximum GFA is 80m²;

b. does not gain access from a separate driveway to that of the industrial use;

c. provides a minimum 16m² of private open space directly accessible from a habitable room;

d. provides car parking in accordance with Schedule 7 - Car parking.

### Sales office (72)

**PO59**

Sales office (72) remain temporary in duration and demonstrates a relationship to the land or buildings being displayed or sold.

**E59**

A Sales office (72) is located on the site for no longer than 2 years.

### Major electricity infrastructure (43), Substation (80) and Utility installation (86)

**PO60**

The development does not have an adverse impact on the visual amenity of a locality and is:

a. high quality design and construction;

b. visually integrated with the surrounding area;

c. not visually dominant or intrusive;

d. located behind the main building line;

e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;

f. camouflaged through the use of colours and materials which blend into the landscape;

g. treated to eliminate glare and reflectivity;

h. landscaped;

i. otherwise consistent with the amenity and character of the zone and surrounding area.

**E60.1**

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

a. are enclosed within buildings or structures;

b. are located behind the main building line;

c. have a similar height, bulk and scale to the surrounding fabric;

d. have horizontal and vertical articulation applied to all exterior walls.

**E60.2**

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

**PO61**

Infrastructure does not have an impact on pedestrian health and safety.

**E61**

Access control arrangements:
<table>
<thead>
<tr>
<th><strong>PO62</strong></th>
<th><strong>E62</strong></th>
</tr>
</thead>
</table>
| All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:  
  a. generates no audible sound at the site boundaries where in a residential setting; or  
  b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. | All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. |

**Telecommunications facility** (81)

Editor’s note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3kHz to 300GHz.

<table>
<thead>
<tr>

<th><strong>E63</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Telecommunications facilities (81) are co-located with existing telecommunications facilities (81), Utility installation (86), Major electricity infrastructure (43), or Substation (80), if there is already a facility in the same coverage area.</td>
<td>New telecommunications facilities (81) are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.</td>
</tr>
</tbody>
</table>

**E63.1**

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

<table>
<thead>
<tr>
<th><strong>PO64</strong></th>
<th><strong>E64</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>A new Telecommunications facility (81) is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.</td>
<td>A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>PO65</strong></th>
<th><strong>E65</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Telecommunications facilities (81) do not conflict with lawful existing land uses both on and adjoining the site.</td>
<td>The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>PO66</strong></th>
<th><strong>E66.1</strong></th>
</tr>
</thead>
</table>
The Telecommunications facility\(^{(81)}\) does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- c. not visually dominant or intrusive;
- d. located behind the main building line;
- e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- f. camouflaged through the use of colours and materials which blend into the landscape;
- g. treated to eliminate glare and reflectivity;
- h. landscaped;
- i. otherwise consistent with the amenity and character of the zone and surrounding area.

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

**E66.2**

In all other areas towers do not exceed 35m in height.

**E66.3**

Towers, equipment shelters and associated structures are of a design, colour and material to:

- a. reduce recognition in the landscape;
- b. reduce glare and reflectivity.

**E66.4**

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

**E66.5**

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

**E66.6**

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

**PO67**

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

**E67**

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site’s context.

**PO68**

**E68**
### All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

### Values and constraints criteria

**Note** - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

**Note** - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

#### PO69

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
- protects the environmental and ecological values and health of receiving waters;
- protects buildings and infrastructure from the effects of acid sulfate soils.

#### E69

Development does not involve:

- excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below than 5m Australian Height datum AHD; or
- filling of land of more than 500m$^3$ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

### Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

**Note** - The following are excluded from the native clearing provisions of this planning scheme:

- Clearing of native vegetation located within an approved development footprint;
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Grazing of native pasture by stock;

i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

Vegetation clearing, ecological value and connectivity

PO70
Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;

b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor’s note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No example provided.

PO71
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

a. retaining habitat trees;

b. providing contiguous patches of habitat;

No example provided.
c. provide replacement and rehabilitation planting to improve connectivity;
d. avoiding the creation of fragmented and isolated patches of habitat;
e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

**Vegetation clearing and habitat protection**

**PO72**
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.  
No example provided.

**PO73**
Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

**PO74**
Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

a. providing contiguous patches of habitat;
b. avoiding the creation of fragmented and isolated patches of habitat;
c. providing wildlife movement infrastructure;
d. providing replacement and rehabilitation planting to improve connectivity.

**Vegetation clearing and soil resource stability**

**PO75**
Development does not:  
No example provided.
a. result in soil erosion or land degradation;  
b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

### Vegetation clearing and water quality

**PO76**  
Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:  

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;</td>
<td>No example provided.</td>
</tr>
<tr>
<td>b. avoiding or minimising changes to landforms to maintain hydrological water flows;</td>
<td></td>
</tr>
<tr>
<td>c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry(^4) and animal keeping(^6) activities.</td>
<td></td>
</tr>
</tbody>
</table>

**PO77**  
Development minimises adverse impacts of stormwater run-off on water quality by:  

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a. minimising flow velocity to reduce erosion;</td>
<td>No example provided.</td>
</tr>
<tr>
<td>b. minimising hard surface areas;</td>
<td></td>
</tr>
<tr>
<td>c. maximising the use of permeable surfaces;</td>
<td></td>
</tr>
<tr>
<td>d. incorporating sediment retention devices;</td>
<td></td>
</tr>
<tr>
<td>e. minimising channelled flow.</td>
<td></td>
</tr>
</tbody>
</table>

### Vegetation clearing and access, edge effects and urban heat island effects

**PO78**  
Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.  

**PO79**  
Development minimises potential adverse ‘edge effects’ on ecological values by:  

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a. providing dense planting buffers of native vegetation between a development and environmental areas;</td>
<td>No example provided.</td>
</tr>
<tr>
<td>b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;</td>
<td></td>
</tr>
<tr>
<td>c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;</td>
<td></td>
</tr>
<tr>
<td>d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;</td>
<td></td>
</tr>
<tr>
<td>e. landscaping with native plants of local origin.</td>
<td></td>
</tr>
</tbody>
</table>
Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

<table>
<thead>
<tr>
<th>PO80</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:</td>
</tr>
<tr>
<td>a. pervious surfaces;</td>
</tr>
<tr>
<td>b. providing deeply planted vegetation buffers and green linkage opportunities;</td>
</tr>
<tr>
<td>c. landscaping with local native plant species to achieve well-shaded urban places;</td>
</tr>
<tr>
<td>d. increasing the service extent of the urban forest canopy.</td>
</tr>
</tbody>
</table>

**Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets**

<table>
<thead>
<tr>
<th>PO81</th>
</tr>
</thead>
<tbody>
<tr>
<td>Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.</td>
</tr>
</tbody>
</table>

Editor's note - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

**Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)**

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

<table>
<thead>
<tr>
<th>PO82</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development will:</td>
</tr>
<tr>
<td>a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>E82</th>
</tr>
</thead>
<tbody>
<tr>
<td>Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.</td>
</tr>
</tbody>
</table>
b. protect the fabric and setting of the heritage site, object or building;
c. be consistent with the form, scale and style of the heritage site, object or building;
d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
f. retain public access where this is currently provided.

**PO83**

Demolition and removal is only considered where:

a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
c. limited demolition is performed in the course of repairs, maintenance or restoration; or
d. demolition is performed following a catastrophic event which substantially destroys the building or object.

**PO84**

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

**PO85**

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

**Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)**
<table>
<thead>
<tr>
<th>PO86</th>
<th>Development:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>minimises the risk to persons from overland flow;</td>
</tr>
<tr>
<td>b.</td>
<td>does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.</td>
</tr>
</tbody>
</table>

No example provided.

<table>
<thead>

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDE.
b. impacts on the asset life and integrity of park structures is minimised;
c. maintenance and replacement costs are minimised.

### Riparian and wetland setbacks

<table>
<thead>

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
6 Zones

6.2.7.5 Marine industry precinct

6.2.7.5.1 Purpose - Marine industry precinct

1. The purpose of the code will be achieved through the following overall outcomes for the Marine Industry Precinct:
   a. Development in the precinct supports the continued viability of waterfront-based industry in the region, through the co-location of Port services, Marine industry and related activities which support industry and its supply chain.
   b. Development in the precinct avoids land-use activities which:
      i. compromise or sterilise existing or future waterfront based industrial activities in the precinct;
      ii. undermine the investment made in waterfront and marine infrastructure, including marinas and access roads;
      iii. occupy large land areas and do not require waterfront access.
   c. Development for non-industrial uses including Caretaker's accommodation, Food and drink outlets and community activities may be established in the precinct where they require access to a navigable waterway or provide support or complementary services to maritime activities.
   d. The scale, character and built form of development has a high standard of commercial and industrial design which reflects the maritime character of the precinct and incorporates crime prevention through environmental design (CPTED) principles.
   e. Development is located, designed and managed to maintain the health and safety of people, avoid significant adverse effects on the natural environment and minimise the possibility of adverse impacts on nearby non-industrial uses.
   f. Development has access to infrastructure and essential services and convenient access to major transport routes.
   g. Sensitive land uses in the precinct do not compromise existing or future industrial activities.
   h. Special industry does not establish within the precinct.
   i. Service industry, Warehouse, Low impact industry and Medium impact industry uses only occur in the precinct where:
      i. there is a direct nexus with maritime activities occurring in the precinct;
      ii. involving manufacturing, repair, processing, storage or maintenance activities associated with watercraft or seafood;
      iii. appropriate separation distances are maintained to sensitive land uses.
   j. Built form including height of buildings used for the storage or repair of medium to large scale vessels contribute to a high standard of amenity and are sensitively located to minimise any adverse impacts on adjoining properties.
   k. Development incorporates best practice responses to the environmental constraints and values of it's location adjacent to coastal areas and waterways.
   l. Development does not compromise the safe and efficient operation of adjacent waterways.
   m. Development in the Scarborough Harbour:
      i. incorporates a range of waterfront industrial and related commercial activities which support the continued growth of the harbour;
ii. may include activities which do not require waterfront access or have a nexus with Marine industry\(^{(45)}\), only where these activities enhance the competitive advantage of the Marine industry\(^{(45)}\) cluster and ensure the area is an attractive place to work and do business;

iii. may only incorporate sensitive land uses where these uses are appropriately separated from existing and future industrial activities and do not compromise the long-term development of the harbour.

n. General works associated with the development achieves the following:

i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);

ii. the development manages stormwater to:

A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
B. prevent stormwater contamination and the release of pollutants;
C. maintain or improve the structure and condition of drainage lines and riparian areas;
D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;

iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

o. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.

p. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

q. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

r. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;
B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
x. ensuring effective and efficient disaster management response and recovery capabilities;
xii. where located in an overland flow path:
  A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
  B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
  C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
  D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

s. Development in the Marine industry precinct includes one or more of the following:

- Aquaculture (6) - if in a building
- Caretaker's accommodation (10)
- Emergency services (25)
- Environment facility (26)
- Food and drink outlet (28) - if a maximum GFA of 100m²
- Landing (41)
- Marine industry (45)
- Port services (61)
- Sales office (72)

t. Development in the Marine industry precinct does not include any of the following:

- Adult store (1)
- Agricultural supplies store (2)
- Air services (3) - if not in Scarborough Harbour
- Animal husbandry (4)
- Animal keeping (5)
- Bar (7)
- Brothel (8)
- Cemetery (12)
- Child care centre (13)
- Club (14) - if not in Scarborough Harbour
- Community care centre (15)
- Community residence (16)
- Community use (17)
- Extractive industry (27)
- Function facility (29)
- Funeral parlour (30)
- Garden centre (31)
- Health care services (33)
- Hospital (36)
- Hotel (37)
- Indoor sport and recreation (38)
- Intensive animal industry (39)
- Intensive horticulture (40)
- Major electricity infrastructure (43)
- Major sport, recreation and entertainment facility (44)
- Parking station (58)
- Permanent plantation (59)
- Place of worship (60)
- Relocatable home park (62)
- Renewable energy facility (63)
- Residential care facility (65)
- Resort complex (66)
- Retirement facility (67)
- Roadside stall (68)
- Rooming accommodation (69)
- Rural industry (70)
- Rural workers' accommodation (71)
- Shopping centre
Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.5.2 Criteria for assessable development

Where development is categorised as assessable development - code assessment in the Table of Assessment, and located in a precinct, the assessment benchmarks are the criteria set out in Part F, Table 6.2.7.5.1 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

Part F—Criteria for assessable development - Marine industry precinct

<td>No example provided.</td>
</tr>
</tbody>
</table>
Watercraft traffic generated by the development remains within the capacity of the adjacent waterways and navigational facilities.

<table>
<thead>
<tr>
<th>Site cover</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO4</strong> Site cover is limited to a proportion of a site that ensures:</td>
</tr>
<tr>
<td>a. A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;</td>
</tr>
<tr>
<td>b. Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;</td>
</tr>
<tr>
<td>c. Setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;</td>
</tr>
<tr>
<td>d. Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Building height</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO5</strong> The height of buildings is in keeping with the predominant marine industrial character of the precinct and does not cause adverse amenity impacts on sensitive land uses and zones.</td>
</tr>
<tr>
<td><strong>E5</strong> Building height does not exceed the maximum height identified on Overlay map - Building heights.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Setbacks</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PO6</strong> Street boundary setbacks:</td>
</tr>
<tr>
<td>a. Minimise building bulk and visual dominance from the street;</td>
</tr>
<tr>
<td>b. Provide areas for landscaping at the front of the site;</td>
</tr>
<tr>
<td>c. Allow for customer parking to be located at the front of the building.</td>
</tr>
<tr>
<td><strong>E6</strong> Buildings maintain a minimum setback of:</td>
</tr>
<tr>
<td>a. 6m to the street frontage (other than the Bruce Highway);</td>
</tr>
<tr>
<td>b. 3m to the secondary street frontage;</td>
</tr>
<tr>
<td>c. 10m to a boundary adjoining the Bruce Highway.</td>
</tr>
</tbody>
</table>

<p>| <strong>PO7</strong> Building setbacks allow access to the waterway and do not compromise future marine industries and port services from accessing the waters edge. |
| <strong>E7</strong> Buildings are setback 4m from the waters edge, measured from the top edge of bank. |</p>
<table>
<thead>
<tr>
<th>PO8</th>
<th>E8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Side and rear boundary setbacks maintain views, privacy, access to natural light and the visual amenity of adjoining sensitive land uses.</td>
<td>Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m.</td>
</tr>
</tbody>
</table>

Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.

<table>
<thead>
<tr>
<th>Building appearance and design</th>
</tr>
</thead>
<tbody>
<tr>
<td>PO9</td>
</tr>
<tr>
<td>Buildings on highly visible sites incorporate a high standard of industrial design and construction, which adds visual interest to the streetscape and reduces the perceived bulk of the building from the street.</td>
</tr>
</tbody>

<tr>
<td>Development maintains, contributes to or provides for interconnected street, pedestrian and cyclist networks.</td>
<td>Development provides and maintains the connections shown on the movement figures located in Appendix A of Planning scheme policy - Neighbourhood design.</td>
</tr>
</tbody>
</table>
### Car parking

**PO14**

Car parking is provided on-site to meet the anticipated demand for employees and visitors and avoid adverse impacts on the external road network.

Note - Refer to Planning scheme policy - Neighbourhood design for guidance on achieving the above outcome.

**E14**

Car parking is provided in accordance with Schedule 7 - Car parking.

### PO15

The design of car parking areas:

a. does not impact on the safety of the external road network;

b. ensures the safety of pedestrians at all times;

c. ensures the safe movement of vehicles within the site.

### Bicycle parking and end of trip facilities

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

**PO16**

a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:

   i. adequate bicycle parking and storage facilities; and

**E16.1**

Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is a
ii. adequate provision for securing belongings; and

iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.

b. Notwithstanding a, there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:

i. the projected population growth and forward planning for road upgrading and development of cycle paths; or

ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or

iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council’s assessment in its building work concurrency agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the examples under this heading meet the current performance requirement prescribed in the Queensland Development Code.

combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E16.2

Bicycle parking is:

a. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;

b. protected from the weather by its location or a dedicated roof structure;

c. located within the building or in a dedicated, secure structure for residents and staff;

d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

E16.3

For non-residential uses, storage lockers:

a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);

b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
For non-residential uses, changing rooms:

a. are provided at a rate of 1 per 10 bicycle parking spaces;
b. are fitted with a lockable door or otherwise screened from public view;
c. are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

<table>
<thead>
<tr>
<th>Bicycle spaces provided</th>
<th>Male/ Female</th>
<th>Change rooms required</th>
<th>Showers required</th>
<th>Sanitary compartments required</th>
<th>Washbasins required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-5</td>
<td>Male and female</td>
<td>1 unisex change room</td>
<td>1</td>
<td>1 closet pan</td>
<td>1</td>
</tr>
<tr>
<td>6-19</td>
<td>Female</td>
<td>1</td>
<td>1</td>
<td>1 closet pan</td>
<td>1</td>
</tr>
<tr>
<td>20 or more</td>
<td>Male</td>
<td>1</td>
<td>1</td>

</tr>
<tr>
<td></td>
<td>Female</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>2</td>
<td>2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
<tr>
<td></td>
<td>Male</td>
<td>2, plus 1 for every 20 bicycle spaces provided thereafter</td>
<td>1</td>
<td>1 urinal and 1 closet pan, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter</td>
<td>1, plus 1 for every 60 bicycle parking spaces provided thereafter</td>
</tr>
</tbody>
</table>

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

d. are provided with:

i. a mirror located above each wash basin;
ii. a hook and bench seating within each shower compartment;
iii. a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The examples for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This example is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
### Loading and servicing

**PO17**

Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads.

*Note - If landscaping is proposed for screening purposes, refer to Planning scheme policy - Integrated design for determining acceptable levels.*

### Waste

**PO18**

Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy—Waste: are designed, located and managed to prevent amenity impacts on the locality.

No example provided: E18

Development is designed to meet the criteria in the Planning scheme policy - Waste and is demonstrated in a waste management program.

### Environmental impacts

**PO19**

Where a use is not an environmentally relevant activity under the Environmental Protection Act, the release of any containment that may cause environmental harm is mitigated to an acceptable level.

**E19**

Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.

**PO20**

Development does not adversely impact surrounding ecological system features, including:

- Water quality;
- Air quality;
- Soil quality;
- Disturbance to marine habitat.

**E20.1**

The development does not discharge pollutants into adjacent waterways.

**E20.2**

The development does not cause an environmental nuisance or harm to marine habitat.

**E20.3**

Where involving a marina, the development is capable of providing sewer facilities for the disposal of sewage, liquid waste and contaminated bilge water.

### Lighting

**PO21**

Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.

**E21**

Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.
**Noise**

**E23.1**

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

**E23.2**

Noise attenuation structures (e.g. walls, barriers or fences):

a. are not visible from an adjoining road or public area unless:
   i. adjoining a motorway or rail line; or
   ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.

b. do not remove existing or prevent future active transport routes or connections to the street network;

c. are located, constructed and landscaped in accordance with Planning scheme policy – Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

**Emissions into Brisbane operational airspace**

**E24.1**

- Note - “Curfewed hours” are taken to be those hours between 10pm and 7am on the following day
**Emissions**

Development does not emit a gaseous plume into the airport’s operational airspace at a velocity exceeding 4.3m per second.

**Note** - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport’s operational airspace.

---

**Hazardous Chemicals**

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with ‘State Planning Policy Guideline - Guidance on development involving hazardous chemicals’.

Terms used in this section are defined in State ‘State Planning Policy Guideline - Guidance on development involving hazardous chemicals’.

---

**PO25**

Offsite risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

---

**E24.2**

Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

---

**PO25**

Offsite risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

---

**E25.1**

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

**Dangerous Dose**

a. For any hazard scenario involving the release of gases or vapours:
   i. AEGL2 (60 minutes) or if not available ERPG2;
   ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

b. For any hazard scenario involving fire or explosion:
   i. 7kPa overpressure;
   ii. 4.7kW/m² heat radiation.

If criteria E21.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10^-6/year.

---

**E25.2**

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

**Dangerous Dose**
For any hazard scenario involving the release of gases or vapours:

i. AEGL2 (60 minutes) or if not available ERPG2;

ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

For any hazard scenario involving fire or explosion:

i. 7kPa overpressure;

ii. 4.7kW/m² heat radiation.

If criteria E21.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10⁻⁶/year.

**E25.3**

Offsite impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

**Dangerous Dose**

For any hazard scenario involving the release of gases or vapours:

i. AEGL2 (60 minutes) or if not available ERPG2;

ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

For any hazard scenario involving fire or explosion:

i. 14kPa overpressure;

ii. 12.6kW/m² heat radiation.

If criteria E21.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10⁻⁶/year.

**PO26**

Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

**E26**

Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.

**PO27**

**E27**
Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.

**PO28**

Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government “flood hazard area” are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

**E28.1**

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively:

a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and

b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

**E28.2**

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area’s flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

**Clearing of habitat trees where not located within the Environmental areas overlay map**

**PO29**

a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.

c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

**No example provided.**

**PO36**

The layout of the development does not compromise:

a. the development of the road network in the area;
b. the function or safety of the road network;
c. the capacity of the road network.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

---

**E36.1**

The development provides for the extension of the road network in the area in accordance with Council’s road network planning.

---

**E36.2**

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council’s road planning.

---

**E36.3**

The *net* development layout allows forward vehicular access to and from the site.

---

**PO37**

Safe access is provided for all vehicles required to access the site.

---

**E37.1**

Site access and driveways are designed and constructed in accordance with:

a. *where for a Council-controlled road and associated with a Dwelling house:*
   - Planning scheme policy - Integrated design;

b. *Where for a Council-controlled road and not associated with a Dwelling house:*
   - **AS/NZS2890.1** section 3: Parking facilities Part 1: Off street car parking;
   - **AS 2890.2** - Parking facilities Part 2: Off-street commercial vehicle facilities;
   - Planning scheme policy - Integrated design;
   - Schedule 8 - Service vehicle requirements;

c. *Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.*

---

**E37.2**

Internal driveways, car parks and access ways are designed and constructed with a sealed pavement and in accordance with:

a. **AS/NZS 2890.1** Parking Facilities *Part 1: Off street car parking*;
b. AS 2890.2 Parking Facilities Part 2: Off street commercial vehicle facilities; and

c. the relevant standards in Planning scheme policy - Integrated design; and

d. Schedule 8 - Service vehicle requirements.

Note - This includes queue lengths (refer to Schedule 8 - Service vehicle requirements), pavement widths and construction.

E37.3

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

E

Access driveways, manoeuvring areas and loading facilities are constructed with reinforced concrete road pavements. Concrete is to be designed in accordance with rigid road pavement design principles.

Note - Pavements are to be designed by an RPEQ.

E

Landscaping (including shade trees) is provided within car parks in accordance with Planning scheme policy - Integrated design.

PO

Sealed and flood free road access during the minor storm event is available to the site from the nearest arterial or sub-arterial road.

Editor's Note - Where associated with a State-controlled road, further requirements may apply, and approvals may be required from the Department of Transport and Main Roads.

E

Roads or streets giving access to the development from the nearest arterial or sub-arterial road are flood free during the minor storm event and are sealed.

Note - The road network is mapped on Overlay Map - Road Hierarchy.

PO

Roads which provide access to the site from an arterial or sub-arterial road remain trafficable during major storm events without flooding or impacting upon residential properties or other premises.

E

Access roads to the development have sufficient longitudinal and cross drainage to remain safely trafficable during major storm (1% AEP) events.

Note - The road network is mapped on Overlay map - Road hierarchy.
<table>
<thead>
<tr>
<th>Note - Refer to QUDM for requirements regarding trafficability.</th>

<tr>
<th>PO</th>
</tr>
</thead>
<tbody>
<tr>
<td>No example provided.</td>
</tr>
</tbody>
</table>

Upgrade works (whether trunk or non-trunk) are provided where necessary to:
### a. Ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network.

### b. Ensure the orderly and efficient continuation of the active transport network.

### c. Ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

**Note:** An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome. Refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

**Note:** The road network is mapped on Overlay map - Road hierarchy.

**Note:** The primary and secondary active transport network is mapped on Overlay map - Active transport.

**Note:** To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

- Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage wherever required;
- Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road or shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve;

**Note:** Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

### The existing road network (whether trunk or non-trunk) is upgraded as necessary to cater for the impact from the development.

**Note:** An applicant will be required to submit an Integrated Transport Assessment (ITA), prepared in accordance with Planning scheme policy - Integrated transport assessment to demonstrate compliance with this PO, when any of the following occurs:

- Development is within 200m of a transport sensitive location such as a school, shopping centre, bus or train station or a large generator of pedestrian or vehicular traffic;
- Forecast traffic to/from the development exceeds 5% of the two way flow on the adjoining road or intersection in the morning or afternoon transport peak within 10 years of the development completion;
- Development access onto a sub arterial, or arterial road or within 100m of a signalised intersection;
- Residential development greater than 50 lots or dwellings;
- Offices greater than 4,000m2 Gross Floor Area (GFA);
- Retail activities including Hardware and trade supplies;

### New intersections onto existing roads are designed to accommodate traffic volumes and traffic movements taken from a date 10 years from the date of completion of the last stage of the development. Detailed design is to be in accordance with Planning scheme policy - Integrated design.

**Note:** All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

**Note:** Existing on-street parking is to be retained at new road intersections and along road frontages wherever practicable.

### E

**E**

Existing intersections external to the site are upgraded as necessary to accommodate increased traffic from the development. Design is in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**Note:** All turns vehicular access to existing lots is to be retained at new road intersections wherever practicable.

**Note:** Existing on-street parking is to be retained at upgraded road intersections and along road frontages wherever practicable.

### The active transport network is extended in accordance with Planning scheme policy - Integrated design.
Showroom, Shop or Shopping centre greater than 1,000m² GFA;

- Warehouses and Industry greater than 6000m² GFA;

- On-site carpark greater than 100 spaces;

- Development has a trip generation rate of 100 vehicles or more within the peak hour;

- Development which dissects or significantly impacts on an environmental area or an environmental corridor.

The ITA is to review the development's impact upon the external road network for the period of 10 years from completion of the development. The ITA is to provide sufficient information for determining the impact and the type and extent of any ameliorative works required to cater for the additional traffic. The ITA must include a future structural road layout of adjoining properties that will form part of this catchment and road connecting to these properties. The ITA is to assess the ultimate developed catchment's impacts and necessary ameliorative works, and the works or contribution required by the applicant as identified in the study.

Note: The road network is mapped on Overlay map - Road hierarchy.

Note: The primary and secondary active transport network is mapped on Overlay map - Active transport.

PO

Intersections along all streets and roads are located and designed to provide safe and convenient movements for all users.

E

Intersections are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

E

Intersection spacing (centreline – centreline) along a through road conforms with the following:

a. where the through road provides an access function;
   i. intersecting road located on the same side = 60 metres;
   ii. intersecting road located on opposite side (Left Right Stagger) = 60 metres;
   iii. intersecting road located on opposite side (Right Left Stagger) = 40 metres.

b. Where the through road provides a collector or sub-arterial function:
   i. intersecting road located on the same side = 100 metres.
ii. intersecting road located on opposite side (Left Right Stagger) = 100 metres;

iii. intersecting road located on opposite side (Right Left Stagger) = 60 metres.

c. Where the through road provides an arterial function:

i. intersecting road located on the same side = 300 metres;

ii. intersecting road located on opposite side (Left Right Stagger) = 300 metres;

iii. intersecting road located on opposite side (Right Left Stagger) = 300 metres;

d. Walkable block perimeter does not exceed 1000 metres.

Note - Based on the absolute minimum intersection spacing identified above, all turns access may not be permitted (i.e. left in/ left out only) at intersections with sub-arterial roads or arterial roads.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - An Integrated Transport Assessment (ITA) including preliminary intersection designs, prepared in accordance with Planning scheme policy - Integrated transport assessment may be required to demonstrate compliance with this PO. Intersection spacing will be determined based on the deceleration and queue storage distances required for the intersection after considering vehicle speed and present/forecast turning and through volumes.

### PO

All Council controlled frontage roads are designed and constructed in accordance with Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. All new works are extended to join any existing works within 20m:

- Note - Frontage roads include streets where no direct lot access is provided.

- Note - The road network is mapped on Overlay map - Road hierarchy.

- Note - The Primary and Secondary active transport network is mapped on Overlay map - Active transport.

### E

Design and construct all Council controlled frontage roads in accordance with Planning scheme policy - Integrated design, Planning scheme policy - Operational works inspection, maintenance and bonding procedures and the following:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Minimum construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frontage road unconstructed or gravel road only; OR Frontage road sealed but not constructed* to Planning scheme policy - Integrated design standard;</td>
<td>Construct the verge adjoining the development and the carriageway (including development side kerb and channel) to a minimum sealed width containing near side parking lane (if required), cycle lane (if required), 2 travel lanes plus 1.5m wide (full depth pavement).</td>
</tr>
</tbody>
</table>
### Stormwater

<table>

<tr>
<td><strong>PO</strong></td>
<td><strong>E</strong></td>
</tr>
<tr>
<td>The internal drainage system safely and adequately conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment through the site.</td>
<td><strong>Note</strong> - Roads are considered to be constructed in accordance with Council’s standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. <strong>OR</strong> Frontage road partially constructed* to Planning scheme policy - Integrated design standard. gravel shoulder and table drainage to the opposite side. The minimum total travel lane width is:  - 6m for minor roads;  - 7m for major roads;</td>
</tr>
<tr>
<td><strong>Major stormwater drainage system(s) have the capacity to safely convey stormwater flows for the 1% AEP event for the fully developed upstream catchment:</strong></td>
<td><strong>E</strong> The external (downstream) drainage system safely conveys the stormwater flows for the 1% AEP event for the fully developed upstream catchment without allowing the flows to encroach upon private lots.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
</tbody>
</table>
| **PO** Provide measures to properly manage surface flows for the 1% AEP event (for the fully developed catchment) draining to and through the land to ensure no actionable nuisance is created to any person or premises as a result of the development. The development must not result in ponding on adjacent land, redirection of surface flows to other premises or blockage of a surface flow relief path for flows exceeding the design flows for any underground system within the development. | **E** The flow velocity in all unlined or soft faced open drains is kept within acceptable limits for the type of material or lining and condition of the channel.  
Note - Refer to QUDM for recommended average flow velocities.  |
| **PO39** Stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises.  
Note - Refer to Planning scheme policy - Integrated design for details.  
Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.  
Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure. | **No example provided.** |
### PO40

Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

### PO41

Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 2 of the SPP.

Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

Where development:

- **a.** is for an urban purpose that involves a land area 2500m² or greater in size; and
- **b.** results in 6 or more dwellings; or
- **c.** results in an impervious area greater than 25% of the net developable area;

Stormwater quality management systems are designed, constructed, established and maintained to minimise the environmental impact of stormwater on surface, groundwater and receiving water environments and meet the design objectives outlined in Schedule 10 - Stormwater management design objectives.

Note - A site based stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Integrated Design (Appendix C).

### PO42

Easements for drainage purposes are provided over:

- **a.** stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;
- **b.** overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

### E

No example provided.

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land (including inter-allotment drainage) is protected by easements in favour of Council. Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum easement width (excluding access requirements)</th>
</tr>
</thead>
</table>
### Stormwater Drainage Easement Dimensions

Stormwater drainage pipes and structures through or within private land (including inter-allotment drainage) are protected by easements in favour of Council with sufficient area for practical access for maintenance purposes.

Note - In order to achieve a lawful point of discharge, stormwater easements may also be required over temporary drainage channels/infrastructure where stormwater discharges to a balance lot prior to entering Council's stormwater drainage system.

<table>
<thead>
<tr>
<th>Easement Type</th>
<th>Width</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater pipe up to 825mm diameter with sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the stormwater pipe (each side).</td>
</tr>
</tbody>
</table>

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

Note - Refer to Planning Scheme Policy - Integrated Design (Appendix C) for easement requirements over open channels.

### Stormwater Management Facilities

- Stormwater management facilities (excluding outlets) are located outside of riparian areas and prevent increased channel bed and bank erosion.

Note - Additional easement width may be required in certain circumstances in order to facilitate maintenance access to the stormwater system.

### Site Works and Construction Management

**PO43**

The site and any existing structures are maintained in a tidy and safe condition.

**PO44**

All works on-site are managed to:

- minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- minimise as far as possible, impacts on the natural environment;
- ensure stormwater discharge is managed in a manner that does not cause actionable nuisance or annoyance to any person or premises;
- avoid adverse impacts on street trees and their critical root zone.

**E44.1**

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps removal devices designed in accordance with the Urban Stormwater Quality Planning Guidelines, State Planning Policy, Schedule 10 - Stormwater management design objectives, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
- stormwater discharged to adjoining and downstream properties does not cause scour and or erosion of any kind;
- stormwater discharge rates do not exceed pre-existing conditions;
d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and

e. the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins.

f. minimum design storm for all temporary diversion drains and sedimentation basins in accordance with Schedule 10 - Stormwater management design objectives;

g. ponding or concentration of stormwater does not occur in adjoining properties.

E41.2
Stormwater runoff, erosion and sediment controls are constructed in accordance with Planning scheme policy - Integrated design (Appendix C) prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

E41.3
The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

E41.4
Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree:

Existing street trees are protected and not damaged during works.

Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on development sites are adopted and implemented.

PO45
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

E45
No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

PO46

E46.1
All development works on-site and including the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

Note: Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.

Note - A Traffic Management Plan may be required to demonstrate compliance with this PO. A Traffic Management Plan is to be prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

Note - A haulage route must be identified and approved by Council where imported or exported material is transported to the site via a road of Local Collector standard or less, and:

a. the aggregate volume of imported or exported material is greater than 1000m³; or

b. the aggregate volume of imported or exported material is greater than 200m³ per day; or

c. the proposed haulage route involves a vulnerable land use or shopping centre.

Note - A dilapidation report (including photographs) may be required for the haulage route to demonstrate compliance with this PO.

Editor's note - Where associated with a State-controlled road, further requirements may apply, and approval may be required from the Department of Transport and Main Roads.

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

E46.2

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

E46.3

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

E

Construction traffic to and from the development site uses the highest classification streets or roads where a choice of access routes is available. Haul routes for the transport of imported or spoil material and gravel pavement material along Council roads below sub-arterial standard must be approved routes.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Note - A dilapidation report may be required to demonstrate compliance with this E.

E

Where works are carried out in existing roads, the works must be undertaken so that the existing roads are maintained in a safe and useable condition. Practical access for residents, visitors and services (including postal deliveries and refuse collection) is retained to existing lots during the construction period and after completion of the works.

Note - A traffic control plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) will be required for any works that will affect access, traffic movements or traffic safety in existing roads.
**Access to the development site** is obtained via an existing lawful access point.

**PO47**

All disturbed areas are **to be progressively stabilised during construction and the entire site** rehabilitated and substantially stabilised at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

**E47**

At completion of construction all disturbed areas of the site are to be:

a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;

b. grassed stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

**PO**

Earthworks are undertaken to ensure that soil disturbances are staged into manageable areas.

Note - A site specific Erosion and Sediment Control Plan (ESCP) will be required to demonstrate compliance with this PO. An ESCP is to be prepared in accordance with Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design (Appendix C).

**E**

Soil disturbances are staged into manageable areas of not greater than 3.5 ha.

**PO48**

The clearing of vegetation on-site:

a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and

b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;

c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

**E48.1**

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

**E48.2**

Disposal of materials is managed in one or more of the following ways:

a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or

b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.
| All development works are carried out at times which minimise noise impacts to residents; | All development works are carried out within the following times:

a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;
b. no work is to be carried out on Sundays or public holidays.

Note - Work outside the above hours may be approved (in writing) where it can be demonstrated that the work will not cause significant inconvenience or disruption to the public, or the work is unlikely to cause annoyance or inconvenience to occupants of adjacent properties.

| PO49 | No example provided. |

**PO49**

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

---

## Earthworks

**PO50**

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- the natural topographical features of the site;
- short and long-term slope stability;
- soft or compressible foundation soils;
- reactive soils;
- low density or potentially collapsing soils;
- existing fill and soil contamination that may exist on-site;
- the stability and maintenance of steep rock slopes and batters;
- excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

**Note** - Filling or excavation works are to be completed within six months of the commencement date.

<p>| E50.1 | All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary. |
| E50.2 | Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters. |
| E50.3 | Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ. |
| E50.4 | All filling or excavation is contained on-site and is free draining. |
| E50.5 | All fill placed on-site is: |</p>
<table>
<thead>
<tr>
<th><strong>PO51</strong></th>
<th><strong>E51</strong></th>
</tr>
</thead>
</table>
| Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area. | Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.  

**Figure - Embankment** |

<table>
<thead>
<tr>
<th><strong>PO52</strong></th>
<th><strong>E52.1</strong></th>
<th><strong>E52.2</strong></th>

</table>
Retaining walls and structures

**PO55**

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

*Note - Refer to Planning scheme policy - Residential design for guidance on how to achieve compliance with this performance outcome.*

| ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or |
| iii. causes actionable nuisance to any person, property or premises. |

| E55.1 | Earth retaining structures:-- |
| a. are not constructed of boulder rocks or timber; |
| b. where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary: |

*Figure - Retaining on boundary*

| c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary; |
| d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical; 1.5m horizontal; terraced, landscaped and drained as shown below: |

*Figure - Cut*
Filling or excavation does not:

a. involve a change in level of more than 1.0m relative to natural ground level;

OR

result in a batter greater than 1V to 6H;

b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;
c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;

d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:

i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or

ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H.

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT

Figure - Filling or Excavation

PO

All earth retaining structures are to be certified as being designed and constructed in accordance with relevant Australian Standards and Building Code requirements.

E

Retaining walls are designed and certified by a RPEQ so that:

a. the minimum design life (the period assumed in design for which a structure or structural element is required to perform its intended purpose without replacement or major structural repairs) for the earth retaining structure is that specified in Australian Standard AS 4678 Earth-retaining structures;

b. earth retaining structures within the land and around areas of cut on or near the boundaries of the site must be designed to allow for live and dead loads associated with the land/premise’s current occupancy and use;
Table 6.2.7.5.2

**Fire Services**

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   iii. material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
   iv. material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

---

**PO56**

Development incorporates a fire fighting system that:

- satisfies the reasonable needs of the fire fighting entity for the area;
- is appropriate for the size, shape and topography of the development and its surrounds;
- is compatible with the operational equipment available to the fire fighting entity for the area;
- considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
- considers the fire hazard inherent in the surrounds to the development site;
- is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

---

**E56.1**

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations*.

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

- in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
- in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
  i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;

iii. for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

**E56.2**

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

a. an unobstructed width of no less than 3.5m;

b. an unobstructed height of no less than 4.8m;

c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;

d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

**E56.3**

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment*.

**PO57**

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

**E57**

For development that contains on-site fire hydrants external to buildings:

a. those external hydrants can be seen from the vehicular entry point to the site; or

b. a sign identifying the following is provided at the vehicular entry point to the site:

i. the overall layout of the development (to scale);

ii. internal road names (where used);

iii. all communal facilities (where provided);

iv. the reception area and on-site manager’s office (where provided);

v. external hydrants and hydrant booster points;

vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.
<table>

<tr>
<th>PO58</th>
<th>E58</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.</td>
<td>For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note <em>Fire hydrant indication system</em> produced by the Queensland Department of Transport and Main Roads.</td>
</tr>
</tbody>
</table>

Note - The sign prescribed above, and the graphics used are to be:

a. in a form;
b. of a size;
c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

### Use specific criteria

#### Industrial land uses

<table>
<thead>
<tr>
<th>PO59</th>
<th>E59</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ancillary office, administration functions, retail sales and customer service components do not compromise the primary use of the site or marine activities in the precinct.</td>
<td></td>
</tr>
</tbody>
</table>

The combined area of ancillary non-industrial activities, including but not limited to administration and retail functions, does not exceed 10% of the GFA or 200m², whichever is the lesser.

<table>
<thead>
<tr>
<th>PO60</th>
<th>No example provided.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buildings directly adjoining non-industrial zoned land:</td>
<td></td>
</tr>
</tbody>
</table>

a. are compatible with the character of the adjoining areas;
b. minimise overlooking and overshadowing;
c. maintain privacy;
d. do not cause significant loss of amenity to neighbouring residents by way of noise, vibration, odour, lighting, traffic generation and hours of operation.

<table>
<thead>
<tr>
<th>PO61</th>
<th>No example provided.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medium impact industry[^47] uses only establish in the precinct where:</td>
<td></td>
</tr>
</tbody>
</table>
### PO62

Non-industrial components of buildings (including offices and retail areas) are designed as high quality architectural features and incorporate entry area elements such as forecourts, awnings and the architectural treatment of roof lines and fascias.

<table>

</tr>
<tr>
<td><strong>PO65</strong></td>
</tr>
</tbody>
</table>

### PO63

Non-industrial components of buildings (including offices and retail areas) are to be located at the road frontage to assist in activating the frontage and designed as high quality architectural features incorporating entry area elements such as forecourts, awnings and the architectural treatment of roof lines and fascias.

No example provided.

### PO64

With the exception of Caretaker's accommodation⁽¹⁾, residential and other sensitive land uses do not establish within the precinct.

No example provided.

### PO65

Non-industrial uses:

- a. are consolidated with existing non-industrial uses in the precinct;
- b. do not compromise the viability, role or function of the region's centres network;
- c. are not subject to adverse amenity impacts or risk to health from industrial activities;
- d. do not constrain the function of viability of existing of future industrial activities in the surrounding area.

Note - The submission of a Hazard and Nuisance Mitigation Plan may be required to justify compliance with this outcome.
Note - An Economic Impact Assessment may be required to demonstrate compliance with part of the outcome/s above. Refer to Planning scheme policy - Economic impact assessment for information required.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
| **a.** generates no audible sound at the site boundaries where in a residential setting; or  
**b.** meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. |
|---|

**Telecommunications facility**

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3KHz to 300GHz.

**PO74**

Telecommunications facilities are co-located with existing telecommunications facilities, Utility installation, Major electricity infrastructure or Substation if there is already a facility in the same coverage area.

**E74.1**

New telecommunication facilities are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

**E74.2**

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

**PO75**

A new Telecommunications facility is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

**E75**

A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

**PO76**

Telecommunications facilities do not conflict with lawful existing land uses both on and adjoining the site.

**E76**

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

**PO77**

The Telecommunications facility does not have an adverse impact on the visual amenity of a locality and is:

- **a.** high quality design and construction;
- **b.** visually integrated with the surrounding area;
- **c.** not visually dominant or intrusive;
- **d.** located behind the main building line;
- **e.** below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- **f.** camouflaged through the use of colours and materials which blend into the landscape;
- **g.** treated to eliminate glare and reflectivity;

**E77.1**

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

**E77.2**

In all other areas towers do not exceed 35m in height.

**E77.3**

Towers, equipment shelters and associated structures are of a design, colour and material to:
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>h. landscaped;</td>
<td>a. reduce recognition in the landscape;</td>
</tr>
<tr>
<td>i. otherwise consistent with the amenity and character of the zone and surrounding area.</td>
<td>b. reduce glare and reflectivity.</td>
</tr>
</tbody>
</table>

**E77.4**
All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.
Where there is no established building line the facility is located at the rear of the site.

**E77.5**
The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

**E77.6**
A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

\*Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.\*

\*Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.\*

**PO78**
Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

**E78**
An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.

**PO79**
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

**E79**
All equipment comprising the Telecommunications facility which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

### Values and constraints criteria

*Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.*
### Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

<table>
<thead>
<tr>
<th><strong>PO80</strong></th>
<th><strong>E80</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:</td>
<td>Development does not involve:</td>
</tr>
<tr>
<td>a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;</td>
<td>a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or</td>
</tr>
<tr>
<td>b. protects the environmental and ecological values and health of receiving waters;</td>
<td>b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.</td>
</tr>
<tr>
<td>c. protects buildings and infrastructure from the effects of acid sulfate soils.</td>
<td></td>
</tr>
</tbody>
</table>

### Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are excluded from the native clearing provisions of this planning scheme:

| a. Clearing of native vegetation located within an approved development footprint; |
| b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency; |
| c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure; |
| d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence; |
| e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes; |
| f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council; |
| g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens; |
| h. Grazing of native pasture by stock; |
| i. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development. |

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.
Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

### Vegetation clearing, ecological value and connectivity

**PO81**

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- **a.** the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- **b.** on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No example provided.

**PO82**

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- **a.** retaining habitat trees;
- **b.** providing contiguous patches of habitat;
- **c.** provide replacement and rehabilitation planting to improve connectivity;
- **d.** avoiding the creation of fragmented and isolated patches of habitat;
- **e.** providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, ‘stepping stone’ vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

No example provided.

### Vegetation clearing and habitat protection

**PO83**

No example provided.
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

**PO84**

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

- a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;
- b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
- c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

No example provided.

**PO85**

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

- a. providing contiguous patches of habitat;
- b. avoiding the creation of fragmented and isolated patches of habitat;
- c. providing wildlife movement infrastructure;
- d. providing replacement and rehabilitation planting to improve connectivity.

No example provided.

**Vegetation clearing and soil resource stability**

**PO86**

Development does not:

- a. result in soil erosion or land degradation;
- b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

No example provided.

**Vegetation clearing and water quality**

**PO87**

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

- a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
- b. avoiding or minimising changes to landforms to maintain hydrological water flows;
- c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being

No example provided.
used for animal husbandry\(^{(4)}\) and animal keeping\(^{(5)}\) activities.

</tbody>
</table>

Editor’s note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

<table>
<thead>
<tr>
<th><strong>PO91</strong></th>
<th>Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>pervious surfaces;</td>
</tr>
<tr>
<td>b.</td>
<td>providing deeply planted vegetation buffers and green linkage opportunities;</td>
</tr>
</tbody>
</table>
c. landscaping with local native plant species to achieve well-shaded urban places;
d. increasing the service extent of the urban forest canopy.

**Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets**

**PO92**

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, the environmental offset provisions in schedule 11 of the Regulation, in combination with the requirements of the Environmental Offset Act 2014, apply.

**Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)**

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

**PO93**

Development will:

a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
b. protect the fabric and setting of the heritage site, object or building;
c. be consistent with the form, scale and style of the heritage site, object or building;
d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
f. retain public access where this is currently provided.

**E93**

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

**PO94**

Demolition and removal is only considered where:

**No example provided.**
| a. | a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or |
| b. | demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or |
| c. | limited demolition is performed in the course of repairs, maintenance or restoration; or |
| d. | demolition is performed following a catastrophic event which substantially destroys the building or object. |

**PO95**
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

**PO96**
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality. Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

**Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)**

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

**PO97**
Development:

| a. | minimises the risk to persons from overland flow; |
| b. | does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. |

**PO98**
Development:

<p>| a. | not result in the removal of a significant tree; |
| b. | not occur within 20m of a protected tree; |
| c. | involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees. |</p>
<table>
<thead>
<tr>
<th>Rule</th>
<th>Description</th>
</tr>
</thead>
</table>
| a.  | maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;  
    b.  | does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.  
Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.  
Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow. |

PO99  
Development does not:  
| a.  | directly, indirectly or cumulatively cause any increase in overland flow velocity or level;  
    b.  | increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.  
Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring. |

PO100  
Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.  

E100  
Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.  
Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.  

PO101  
Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.  

E101  
Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.  

PO102  
Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.  

E102.1  
Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:  
| a.  | Urban area – Level III;  
    b.  | Rural area – N/A; |
### Riparian and wetland setbacks

**PO105**

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- **a.** impact on fauna habitats;
- **b.** impact on wildlife corridors and connectivity;
- **c.** impact on faunahabitats;
- **d.** impact on wildlife corridors and connectivity;
- **e.** impact on faunahabitats;
- **f.** impact on wildlife corridors and connectivity;
- **g.** impact on faunahabitats;
- **h.** impact on wildlife corridors and connectivity;
- **i.** impact on faunahabitats;
- **j.** impact on wildlife corridors and connectivity;
- **k.** impact on faunahabitats;
- **l.** impact on wildlife corridors and connectivity;
- **m.** impact on faunahabitats;
- **n.** impact on wildlife corridors and connectivity;
- **o.** impact on faunahabitats;
- **p.** impact on wildlife corridors and connectivity;
- **q.** impact on faunahabitats;
- **r.** impact on wildlife corridors and connectivity;
- **s.** impact on faunahabitats;
- **t.** impact on wildlife corridors and connectivity;
- **u.** impact on faunahabitats;
- **v.** impact on wildlife corridors and connectivity;
- **w.** impact on faunahabitats;
- **x.** impact on wildlife corridors and connectivity;
- **y.** impact on faunahabitats;
- **z.** impact on wildlife corridors and connectivity;

**E105**

Development does not occur within:

- **a.** 50m from top of bank for W1 waterway and drainage line;
- **b.** 30m from top of bank for W2 waterway and drainage line;
<p>| | |</p>
<table>

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
6.2.8 Limited development zone code

6.2.8.1 Application - Limited development zone

This code applies to undertaking development in the Limited development zone, if:

1. the development has been categorised as either accepted development subject to requirements or assessable development - code assessment, and this code is identified as applicable to that development in the assessment benchmarks for assessable development and requirements for accepted development column of a table of assessment (Part 5);

2. the development has been categorised as assessable development - impact assessment (Part 5).

When using this code, reference should be made to section 5.3.2 Determining the category of development and category of assessment and, where applicable, section 5.3.3 Determining and applying the requirements for accepted development and the assessment benchmarks for assessable development located in Part 5.

6.2.8.2 Purpose - Limited development zone

1. The purpose of the Limited development zone code is to:
   a. Identify land known to be affected by extremely unacceptable intolerable flood and/or storm tide risks which pose severe restrictions on the ability of land to be developed for urban purposes.
   b. Limit any further urban development and promote transition of existing uses away from the areas of extremely unacceptable intolerable risk.

2. The Limited development zone seeks to implement the policy direction set in part 3, Strategic Framework.

3. The purpose of the code will be achieved through the following overall outcomes:
   a. Development is compatible with the nature of the constraints present on the land.
   b. Development is limited to avoid the extremely unacceptable intolerable risk of the flood hazard for both an existing lawful use and new development.
   c. Supports, and does not unduly burden the disaster management response and recovery capacity and capabilities during and after significant flood events.
   d. Provides for efficient evacuation of on site persons and facilitates direct and simple access for evacuation personnel and resources during flood events, while ensuring development does not hinder or place additional complexities upon evacuation activities for a surrounding property.
   e. Avoids isolation of persons for flood events up to and including the Defined Flood Event.
   f. Provides for siting, built form, layout, and access (including evacuation access) which responds to the risk of the flood hazard and minimises risk to personal safety in all flood hazard events up to and including the Defined Flood Event.
   g. Is resilient to flood events by ensuring the siting and design of development accounts for the potential risks to property associated with flood hazards.
   h. Directly, indirectly and cumulatively avoids an increase in the severity of flood hazards and potential for damage on the premises or to a surrounding property or elsewhere in the floodplain.
   i. Involving essential community infrastructure remains functional during and immediately after a flood event up to and including the Defined Flood Event.
   j. Avoids the accidental release of hazardous materials as a result of a flood event.
k. Maintains natural processes and the protective function of landforms and vegetation.

l. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;

B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;

C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;

vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;

vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;

ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

x. ensuring effective and efficient disaster management response and recovery capabilities;

xi. where located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;

B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;

C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;

D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

m. Development in the Limited development zone includes the following:

- Outdoor sport and recreation\(^{(55)}\)
- Cropping\(^{(19)}\) - where involving forestry for wood production
- Park\(^{(57)}\)
- Permanent Plantation\(^{(59)}\)

n. Development in the Limited development zone does not include one or more of the following:
### 6 Zones

- Adult store\(^{(1)}\)
- Agricultural supplies store\(^{(2)}\)
- Air services\(^{(3)}\)
- Animal keeping\(^{(5)}\)
- Bar\(^{(7)}\)
- Brothel\(^{(8)}\)
- Bulk landscape supplies\(^{(9)}\)
- Car wash\(^{(11)}\)
- Caretaker’s accommodation\(^{(10)}\)
- Cemetery\(^{(12)}\)
- Child care centre\(^{(13)}\)
- Club\(^{(14)}\)
- Community care centre\(^{(15)}\)
- Community residence\(^{(16)}\)
- Community use\(^{(17)}\)
- Crematorium\(^{(18)}\)
- Detention facility\(^{(20)}\)
- Dual occupancy\(^{(21)}\)
- Dwelling house\(^{(22)}\)
- Dwelling unit\(^{(23)}\)
- Educational establishment\(^{(24)}\)
- Emergency services\(^{(25)}\)
- Food and drink outlet\(^{(28)}\)
- Function facility\(^{(29)}\)
- Funeral parlour\(^{(30)}\)
- Garden centre\(^{(31)}\)
- Hardware and trade supplies\(^{(32)}\)
- Health care services\(^{(33)}\)
- High impact industry\(^{(34)}\)
- Home based business\(^{(35)}\)
- Hospital\(^{(36)}\)
- Indoor sport and recreation\(^{(38)}\)
- Intensive animal industry\(^{(39)}\)
- Intensive horticulture\(^{(40)}\)
- Low impact industry\(^{(42)}\)
- Major electricity infrastructure\(^{(43)}\)
- Major sport, recreation and entertainment facility\(^{(44)}\)
- Medium impact industry\(^{(47)}\)
- Motor sport facility\(^{(48)}\)
- Multiple dwelling\(^{(49)}\)
- Nightclub entertainment facility\(^{(51)}\)
- Non-resident workforce accommodation\(^{(52)}\)
- Office\(^{(53)}\)
- Outdoor sales\(^{(54)}\)
- Parking station\(^{(58)}\)
- Place of worship\(^{(60)}\)
- Relocatable home park\(^{(62)}\)
- Renewable energy facility\(^{(63)}\)
- Research and technology industry\(^{(64)}\)
- Residential care facility\(^{(65)}\)
- Resort complex\(^{(66)}\)
- Retirement facility\(^{(67)}\)
- Rooming accommodation\(^{(69)}\)
- Rural industry\(^{(70)}\)
- Rural workers’ accommodation\(^{(71)}\)
- Sales office\(^{(72)}\)
- Service industry\(^{(73)}\)
- Service station\(^{(74)}\)
- Shop\(^{(75)}\)
- Shopping centre\(^{(76)}\)
- Short-term accommodation\(^{(77)}\)
- Showroom\(^{(78)}\)
- Special industry\(^{(79)}\)
- Substation\(^{(80)}\)
- Telecommunications facility\(^{(81)}\)
- Theatre\(^{(82)}\)
- Tourist attraction\(^{(83)}\)
- Tourist park\(^{(84)}\)
- Transport depot\(^{(85)}\)
- Veterinary services\(^{(87)}\)
- Warehouse\(^{(88)}\)
- Wholesale nursery\(^{(89)}\)
- Winery\(^{(90)}\)

---

6.2.8.3 Criteria for assessable development

---

Development not included in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.
Where development is categorised as assessable development - code assessment in the Table of Assessment, the assessment benchmarks are the criteria set out in Part A, Table 6.2.8.1 as well as the purpose statement and overall outcomes of this code.

Where development is categorised as assessable development - impact assessment, the assessment benchmarks become the whole of the planning scheme.

**Part A - Criteria for assessable development - Limited development zone**

Editor's note - Notes may be included within a performance outcome or examples that achieve aspects of the performance outcome highlighting other legislation to be complied with. For example, an Australian standard to support an example or local laws, or providing guidance on interpretation of a performance outcome.
6.2.9 Recreation and open space zone code

6.2.9.1 Application - Recreation and open space zone

This code applies to undertaking development in the Recreation and open space zone, if:

1. the development has been categorised as either accepted development subject to requirements or assessable development - code assessment, and this code is identified as applicable to that development in the assessment benchmarks for assessable development and requirements for accepted development column of a table of assessment (Part 5);

2. the development has been categorised as assessable development - impact assessment (Part 5).

When using this code, reference should be made to section 5.3.2 Determining the category of development and category of assessment and, where applicable, section 5.3.3 Determining and applying the requirements for accepted development and the assessment benchmarks for assessable development located in Part 5.

For accepted development subject to requirements or assessable development under this Code:

1. Part A of the code applies to accepted development subject to requirements
2. Part B of the code applies to assessable development.

6.2.9.2 Purpose - Recreation and open space zone

1. The purpose of the Recreation and open space zone is to provide for a range of sporting, recreation, leisure, cultural and educational activities. It may provide for local, district and regional scale parks that serve the recreation needs of residents and visitors and may include areas for conservation. Areas such as parks, playing fields and playgrounds are generally accessible to the public; however, access may be limited in certain areas and at certain times. Where required to meet community needs, development may include built structures, such as shelters, amenity facilities, picnic tables, clubhouses, gymnasiaums, public swimming pools and tennis courts, and other infrastructure to support the activities, provide safe access and support the management of these essential built structures. Commercial activities are provided for under limited circumstances. The Recreation and open space zone and associated precinct seeks to implement the policy direction set in Part 3, Strategic Framework.

2. The Recreation and open space zone includes one precinct, being the Sports and recreation precinct. The purpose for the Sports and recreation precinct is to recognise existing sport and recreation facilities, on both public and private land, and facilitate their ongoing development and use for the benefit and enjoyment of the community. Therefore, in addition to the general Recreation and open space zone purpose statement, overall outcomes and assessment criteria, there are specific precinct based purpose statements, overall outcomes and assessment criteria. These provide specific guidance and direction regarding the land use outcomes sought in the precinct that are in addition to the Recreation and open space zone. Where there is a conflict, the precinct specific overall outcomes and development tables take precedence and the Recreation and open space zone outcomes and development tables do not apply.

3. The purpose of the Recreation and open space zone will be achieved through the following overall outcomes:

   a. A range of formal and informal, active and passive sport and recreation opportunities are provided to meet community needs. This includes, but not limited to, playing fields, club facilities, play grounds, botanic and community gardens, civic and cultural facilities, public swimming pools, outdoor courts, educational and community activities, indoor and outdoor sporting and recreation activities, recreation trails and camping areas. Ancillary structures and buildings such as shelters, amenity facilities, picnic tables and playgrounds are expected to establish as necessary.

   b. Development is an appropriate size, scale and intensity and having minimal adverse impacts on the use, enjoyment, function and operation of the Council's open space network.

   c. Commercial activities having a nexus with, and ancillary to, sport and recreation uses establish where they complement the social, leisure and recreation experience of open space users; or where on Council owned or controlled land, commercial activities occur where in accordance with a Council approved Master plan.
d. Markets or outdoor entertainment events are temporary or periodic in nature, and of a scale and intensity where any adverse impacts on the surrounds are mitigated and internalised to the site. Markets and outdoor events do not adversely impact on the safe and efficient operation of the external road network.

e. Where applicable, development is undertaken in accordance with a Council Master Plan approved under Council policy.

f. Recreation and open space areas remain well connected, diverse, functional, safe, secure and accessible to the general public and includes:

i. well designed and quality usable areas and facilities;

ii. building design adopting principles of Crime Prevention Through Environment Design (CPTED)

iii. passive and active recreation and open spaces areas and facilities;

iv. high level of connectivity of the open space and community green space areas to the active transport network; and

v. a consideration of the aims and aspirations of the Council's Green Infrastructure Network.

g. Adverse or nuisance impact on surrounding land uses are minimised through appropriate design considerations, separation, buffering, siting and operation of facilities and infrastructure.

h. General works associated with the development achieves the following:

i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);

ii. the development manages stormwater to:

A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
B. prevent stormwater contamination and the release of pollutants;
C. maintain or improve the structure and condition of drainage lines and riparian areas;
D. avoid off-site adverse impacts from stormwater.

iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;

iv. the development ensures the safety, efficiency and useability of access ways and parking areas;

v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

i. Activities associated with a use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke;

j. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

k. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.

l. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:

i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;

ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

A. the provision of replacement, restoration, rehabilitation planting and landscaping;
B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.

v. protecting native species and protecting and enhancing species habitat;
vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
x. ensuring effective and efficient disaster management response and recovery capabilities;
xii. located in an overland flow path:

A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.

m. Development in the Recreation and open space zone includes one or more of the following:

- Animal husbandry
- Animal keeping
- Bar
- Caretaker’s accommodation
- Child care centre
- Club
- Community care centre
- Community use
- Cropping
- Food and drink outlet
- Function facility
- Garden centre
- Health care services
- Indoor sport and recreation
- Intensive horticulture
- Market
- Landing
- Night club entertainment facility
- Outdoor sport and recreation
- Park
- Parking station
- Research and technology industry
- Service industry
- Shop
6 Zones

- Educational establishment\(^{(24)}\)
- Emergency services\(^{(25)}\)
- Environment facility\(^{(26)}\)
- Major sport, recreation and entertainment facility\(^{(44)}\)
- Nature-based tourism\(^{(50)}\)
- Telecommunications facility\(^{(81)}\)
- Tourist attraction\(^{(83)}\)
- Tourist park\(^{(84)}\)
- Wholesale nursery\(^{(89)}\)

Note - Generally the above uses are appropriate on Council owned or controlled land and where in accordance with an approved Council Master Plan. Refer to Part 5, Table of assessment for further information.

n. Development in the Recreation and open space zone does not include any of the following:

- Adult store\(^{(1)}\)
- Agricultural supplies store\(^{(2)}\)
- Air services\(^{(3)}\)
- Aquaculture\(^{(6)}\)
- Brothel\(^{(8)}\)
- Bulk landscape supplies\(^{(9)}\)
- Car wash\(^{(11)}\)
- Cemetery\(^{(12)}\)
- Community residence\(^{(16)}\)
- Crematorium\(^{(18)}\)
- Detention facility\(^{(20)}\)
- Dual occupancy\(^{(21)}\)
- Dwelling house\(^{(22)}\)
- Dwelling unit\(^{(23)}\)
- Extractive industry\(^{(27)}\)
- Funeral parlour\(^{(30)}\)
- Hardware and trade supplies\(^{(32)}\)
- High impact industry\(^{(34)}\)
- Home based business\(^{(35)}\)
- Hospital\(^{(36)}\)
- Hotel\(^{(37)}\)
- Intensive animal industry\(^{(39)}\)
- Low impact industry\(^{(42)}\)
- Major electricity infrastructure\(^{(43)}\)
- Marine industry\(^{(45)}\)
- Medium impact industry\(^{(47)}\)
- Multiple dwelling\(^{(49)}\)
- Non-resident workforce accommodation\(^{(52)}\)
- Office\(^{(53)}\)
- Outdoor sales\(^{(54)}\)
- Permanent plantation\(^{(59)}\)
- Place of worship\(^{(60)}\)
- Port services\(^{(61)}\)
- Relocatable home park\(^{(62)}\)
- Renewable energy facility\(^{(63)}\)
- Residential care facility\(^{(65)}\)
- Resort complex\(^{(66)}\)
- Retirement facility\(^{(67)}\)
- Roadside stall\(^{(68)}\)
- Rooming accommodation\(^{(69)}\)
- Rural industry\(^{(70)}\)
- Rural workers’ accommodation\(^{(71)}\)
- Sales office\(^{(72)}\)
- Service industry\(^{(73)}\)
- Shopping centre\(^{(76)}\)
- Short-term accommodation\(^{(77)}\)
- Showroom\(^{(78)}\)
- Special industry\(^{(79)}\)
- Theatre\(^{(82)}\)
- Transport depot\(^{(85)}\)
- Veterinary services\(^{(87)}\)
- Warehouse\(^{(88)}\)
- Winery\(^{(90)}\)

o. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.
4. The purpose of the Sports and recreation precinct will be achieved through the following additional overall outcomes:

a. Ongoing viability and relevancy of existing and new indoor and outdoor sports and recreation facilities to meet community sport and recreation needs.

b. Where applicable, development is undertaken in accordance with a Council Master Plan approved under Council policy.

c. Activities other than sports and recreation activities having a nexus with, and ancillary to, sports and recreation activities are supported where:
   i. activities do not compete with similar uses in centres;
   ii. activities do not detract from the primary sports and recreation activity occurring on a site;
   iii. activities do not have adverse impacts on the character and amenity of the surrounding receiving environment, including noise, traffic generation, lighting, rubbish and waste disposal.

d. Development adopt a high standard of design and achieve quality buildings, and structures, including adopting the principles of Crime Prevention Through Environment Design (CPTED).

e. Development is compatible with the existing and intended scale and character of the streetscape and surrounding area and does not appear visually dominant or overbearing.

f. Development adopts sensitive design and siting considerations when adjoining residential areas. Design measures such as landscaping, screening and separation are adopted to minimise the visual impact of buildings and hard surfaces and nuisance effects associated with lighting, noise, dust and rubbish disposal.

g. Development mitigates potential traffic impacts by:
   i. locating on roads of a standard and capacity to accommodate traffic demand;
   ii. providing safe and accessible vehicle access points, on-site manoeuvring and parking areas; and
   iii. providing for active transport opportunities.

h. Development on the Redcliffe Leagues Club site (Lot 10 SP 244080 at 148 Klingner Road or Lot 1 SP180303 at 160 Klingner Road, Kippa-Ring) facilitates a limited range of commercial activities that are compatible with, and ancillary to, the operation of the club and associated outdoor facilities as an integrated development. Commercial activities are limited to short term accommodation \(^{(77)}\), shops \(^{(75)}\), offices \(^{(53)}\), and health care services \(^{(53)}\).

i. Development in the Sports and recreation precinct includes one or more of the following:

<table>
<thead>
<tr>
<th>Animal husbandry (^{(4)})</th>
<th>Food and drink outlet (^{(28)})</th>
<th>Outdoor sport and recreation (^{(55)})</th>
</tr>
</thead>
<tbody>
<tr>
<td>Animal keeping (^{(5)})</td>
<td>Function facility (^{(29)})</td>
<td>Park (^{(57)})</td>
</tr>
<tr>
<td>Bar (^{(7)})</td>
<td>Garden centre (^{(31)})</td>
<td>Parking station (^{(58)})</td>
</tr>
<tr>
<td>Caretaker’s accommodation (^{(10)})</td>
<td>Health care services (^{(31)})</td>
<td>Research and technology industry (^{(64)})</td>
</tr>
<tr>
<td>Child care centre (^{(13)})</td>

<tr>
<td>Extractive industry</td>
<td>Residential care facility</td>
<td>Theatre</td>
</tr>
<tr>
<td>Funeral parlour</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
- Hardware and trade supplies
- High impact industry
- Transport depot
- Veterinary services
- Warehouse
- Winery

Note - Generally the above uses are appropriate where located on Council owned or controlled land and is in accordance with an approved Council Master Plan.

Note - Retail and Commercial Activity Group = short term accommodation, shops, offices, and health care services.

k. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the precinct and zone.

6.2.9.3 Accepted development subject to requirements

If development is to be categorised as accepted development subject to requirements it must comply with the requirements for accepted development set out in Part A, Table 6.2.9.1. Where the development does not meet a requirement for accepted development (RAD) within Part A Table 6.2.9.1, the category of development changes to assessable development under the rules outlined in section 5.3.3. (1), and assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a RAD is not met, and is therefore limited to the subject matter of the RADs that are not complied with. To remove any doubt, for those RADs that are complied with, there is no need for assessment against the corresponding PO.

<table>
<thead>

Part A — Requirements for accepted development - Recreation and open space zone

Table 6.2.9.1 Requirements for accepted development - Recreation and open space zone

Requirements for accepted development

Editor’s Note - The requirements for accepted development do not apply where development is on Council owned or controlled land and is in accordance with a Council Master Plan approved under Council Policy

<table>
<thead>
<tr>
<th>General requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Note</strong> - These provisions do not apply where development on Council owned or controlled land and is in accordance with a Council Master Plan approved under Council policy.</td>
</tr>
</tbody>
</table>

Built form outcomes for all development

<table>
<thead>
<tr>
<th>RAD1</th>
<th>Site cover does not exceed 10%, except in the Sport and recreation precinct where site cover does not exceed 40%</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD2</td>
<td>Building and structures are set back 10m from all boundaries.</td>
</tr>
<tr>
<td>RAD3</td>
<td>Building height does not exceed the maximum height identified on Overlay map - Building heights.</td>
</tr>
</tbody>
</table>

Building on sloping land between 10% and 15%

<table>
<thead>
<tr>
<th>RAD4</th>
<th>Building and site design on slopes between 10% and 15%:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>a. use split-level, multiple-slab, pier or pole construction;</td>
</tr>
<tr>
<td></td>
<td>b. avoid single-plane slabs and benching; and</td>
</tr>
<tr>
<td></td>
<td>c. ensure the height of any cut or fill, whether retained or not, does not exceed 900mm.</td>
</tr>
</tbody>
</table>

| Note - This provision does not apply to outbuildings or where a development footprint exists for a lot. |

Lighting

<table>
<thead>
<tr>
<th>RAD5</th>
<th>Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Note - &quot;Curfewed hours&quot; are taken to be those hours between 10pm and 7am on the following day.</td>
</tr>
</tbody>
</table>
### Waste

**RAD6**  Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.

### Landscaping and screening

**RAD7**  In the Sports and recreation precinct, a minimum area of 20% of the site is provided for landscaping.

**RAD8**  Outdoor storage areas are screened from adjoining sites and roads by either planting, wall(s), fence(s) or a combination to at least 1.8m in height along the length of the storage area.

### Car parking

**RAD9**  On-site car parking is provided in accordance with Schedule 7 - Car parking.

### Clearing of habitat trees where not located in the Environmental areas overlay map

**RAD10**  Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:

a. Clearing of a habitat tree located within an approved development footprint;

b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;

c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;

e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

h. Native forest practice where accepted development under Part 1, 1.7.7 Accepted development.

Editor’s note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a ‘habitat tree’. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

### Works requirements

### Utilities

**RAD11**  Where available, the development is connected to:

a. an existing reticulated electricity supply;

b. telecommunications and broadband;

---

Moreton Bay Regional Council Planning Scheme V5  Consultation Version commencing 22 July 2019  2343
c. reticulated sewerage;
d. reticulated water;
e. constructed and dedicated road;

Development is provided in an appropriate level of service and infrastructure in accordance with Planning scheme policy - Integrated design (Appendix A).

Access

RAD

The frontage road is fully constructed to Council’s standards;

Note - Roads are considered to be constructed in accordance with Council standards when there is sufficient pavement width, geometry and depth to comply with the requirements of Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures. Testing of the existing pavement may be required to confirm whether the existing works meet the standards in Planning scheme policy - Integrated design and Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

Note - Frontage roads include streets where no direct lot access is provided;

RAD12

Any new or changes to existing site access crossovers and driveways are designed, and located and constructed in accordance with:

a. where for a Council-controlled road and associated with a Dwelling house:
   i. Planning scheme policy - Integrated design;

b. where for a Council-controlled road, and not associated with a Dwelling house:
   i. AS/NZS2890.1 section 3; or Parking facilities Part 1: Off street car parking;
   ii. AS/NZS 2890.2 - Parking facilities Part 2: Off-street commercial vehicle facilities;
   iii. Planning scheme policy - Integrated design;
   iv. Schedule 8 - Service vehicle requirements;

c. where for a State-Controlled road, the Safe Intersection Sight Distance requirements in Austroads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

RAD13

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS 2890.1 Parking Facilities Part 1: Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

RAD

Access driveways, manoeuvring areas and loading facilities are sealed and provide for service vehicles listed in Schedule 8 - Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 - Service vehicle requirements.

Stormwater
Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing actionable nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

Where development:

- is for an urban purpose that involves a land area 2500m² or greater in size; and
- that results in 6 or more dwelling; or
- that results in an impervious area greater than 25% of the net developable area,

incorporates a 'deemed to comply solution' to manage stormwater quality.

Note - The deemed to comply solution is to be designed, constructed, established and maintained in accordance with the requirements of Water by Design 'Deemed to Comply Solutions - Stormwater Quality Management for South East Queensland' and Planning scheme policy - Integrated design.

Development ensures that surface flows entering the premises from adjacent properties are not blocked, diverted or concentrated.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Development ensures that works (e.g. fences and walls) do not block, divert or concentrate the flow of stormwater to adjoining properties.

Note - A report from a suitably qualified Registered Professional Engineer Queensland may be required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Stormwater drainage infrastructure (excluding detention and bio-retention systems) through or within private land is protected by easements in favour of Council (at no cost to Council). Minimum easement widths are as follows:

<table>
<thead>
<tr>
<th>Pipe Diameter</th>
<th>Minimum Easement Width (excluding access requirements)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Pipe up to 825mm diameter</td>
<td>3.0m</td>
</tr>
<tr>
<td>Stormwater Pipe up to 825mm diameter with Sewer pipe up to 225mm diameter</td>
<td>4.0m</td>
</tr>
<tr>
<td>Stormwater pipe greater than 825mm diameter</td>
<td>Easement boundary to be 1m clear of the outside wall of the pipe and clear of all pits</td>
</tr>
</tbody>
</table>
**Site works and construction management**

<table>
<thead>
<tr>
<th>RAD15</th>
<th>The site and any existing structures are to be maintained in a tidy and safe condition.</th>
</tr>
</thead>
<tbody>
<tr>
<td>RAD16</td>
<td>Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy—Stormwater management and Planning scheme policy—Integrated design. Development does not cause erosion or allow sediment to leave the site. Note - The International Erosion Control Association (Australasia) Best Practice Erosion and Sediment Control provides guidance on strategies and techniques for managing erosion and sedimentation.</td>
</tr>
<tr>
<td>RAD</td>
<td>No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.</td>
</tr>
<tr>
<td>RAD</td>
<td>Existing street trees are protected and not damaged during works. Note - Where development occurs in the tree protection zone, measures and techniques as detailed in Australian Standard AS 4970 Protection of trees on developments sites are adopted and implemented.</td>
</tr>
<tr>
<td>RAD19</td>
<td>Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.</td>
</tr>
<tr>
<td>RAD17</td>
<td>Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.</td>
</tr>
<tr>
<td>RAD20</td>
<td>Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.</td>
</tr>
<tr>
<td>RAD18</td>
<td>All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.</td>
</tr>
<tr>
<td>RAD</td>
<td>Disposal of materials is managed in one or more of the following ways: a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.</td>
</tr>
<tr>
<td></td>
<td>Note - No burning of cleared vegetation is permitted.</td>
</tr>
</tbody>
</table>
Note - The chipped vegetation must be stored in an approved location.

### RAD

All development works are carried out within the following times:

- a. Monday to Saturday (other than public holidays) between 6:30am and 6:30pm on the same day;
- b. no work is to be carried out on Sundays or public holidays.

### Earthworks

#### RAD22

The total of all cut and fill on site does not exceed 900mm in height.

**Figure—Cut-and-Fill**

![Figure—Cut-and-Fill](image)

Note—This is site earthworks not building work.

**Filling or excavation does not:**

- a. involve a change in level of more than 1.0m relative to natural ground level

**OR**

- result in a batter greater than 1V to 6H;
- b. necessitate the construction of a freestanding retaining wall exceeding 1.0m in height relative to finished ground level;
- c. result in the top of any cut batter, or the exposed face of any freestanding retaining wall supporting that cut, being closer than 500mm to a property boundary;
- d. result in the toe of any fill batter, or exposed face of any freestanding retaining wall supporting that fill, being closer than 1.0m to a property boundary unless:
  - i. the depth of fill within the 1.0m strip does not exceed 200mm relative to natural ground level; or
  - ii. the batter slope within that 1.0m strip is no steeper than 1V to 2H;

THE NEW FIGURE BELOW IS PROPOSED AS PART OF THIS AMENDMENT
Cut and fill batters, (other than batters to dams and water impoundments), have a finished slope no steeper than the following:

a. any cut batter is no steeper than 1V in 4H;
b. any fill batter, (other than a compacted fill batter), is no steeper than 1V in 4H;
c. any compacted fill batter is no steeper than 1V in 4H.

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep slopes and batters.

Note – Inspection and certification of steep slopes and batters may be required by a suitably qualified and experienced RPEQ.

All fill and excavation is contained on-site and is free draining.

Earthworks undertaken on the development site are shaped in a manner which does not:

a. prevent stormwater surface flow which, prior to commencement of the earthworks, passed onto the development site, from entering the land; or
b. redirect stormwater surface flow away from existing flow paths; or
c. divert stormwater surface flow onto adjacent land (other than a road) in a manner which:
   i. concentrates the flow; or
   ii. increases the flow rates of stormwater over the affected section of the adjacent land above the situation which existed prior to the diversion; or
   iii. causes actionable nuisance to any person, property or premises.

All fill placed on-site is:
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>limited to that necessary for the approved use;</td>
</tr>
<tr>
<td>b.</td>
<td>clean and uncontaminated (i.e. no building waste, concrete, green waste, actual acid sulfate soils, potential acid sulfate soils or contaminated material etc.) material is used as fill.</td>
</tr>
</tbody>
</table>

**RAD21**
The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

**RAD**
No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity is defined in Schedule 2 of the Act.

**RAD23**
Filling or excavation *that would result in any of the following is not carried out on site* does not result in:

a. reduction in cover over any Council or public sector entity infrastructure to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken;

c. prevent reasonable access to Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the site for monitoring, maintenance or replacement purposes.

Note - Public sector entity is defined in Schedule 2 of the Act.

**Utilities**

**RAD11**
Where available, the development is connected to:

a. an existing reticulated electricity supply;

b. telecommunications and broadband;

c. reticulated sewerage;

d. reticulated water;

e. constructed and dedicated road.

**Access**

**RAD12**
Any new or changes to existing site access and driveways are designed and located in accordance with:

a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or

b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
### Stormwater

**RAD13** Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

### Site works and construction management

**RAD14** Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

**RAD15** The site and any existing structures are to be maintained in a tidy and safe condition.

**RAD16** Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design.

**RAD17** Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

**RAD18** All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

**RAD19** Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.

**RAD20** Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

### Earthworks

**RAD21** The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

**RAD22** The total of all cut and fill on-site does not exceed 900mm in height.
Note - This is site earthworks not building work.

**RAD23**

Filling or excavation does not result in:

a. a reduction in cover over any Council or public sector entity infrastructure to less than 600mm;

b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

Note - Public sector entity is defined in Schedule 2 of the Act.

**Table 6.2.9.2**

**Fire services**

Note - The provisions under this heading only apply if:

a. the development is for, or incorporates:
   - i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
   - ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or
   - iii. material change of use for a Tourist park[^84] with accommodation in the form of caravans or tents; or
   - iv. material change of use for outdoor sales[^54], outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:
   - i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity’s reticulated water supply; or
   - ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer’s reticulated water supply network, measured around all obstructions, either on or adjacent to the site.
Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

| RAD24 | External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations*.  

Note - For this requirement for accepted development, the following are the relevant parts of AS 2419.1 (2005):  
  a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;  
  b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);  
  c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:  
    i. - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;  
    ii. - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;  
    iii. - for outdoor sales, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales, outdoor processing and outdoor storage facilities; and  
  d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6. |

| RAD25 | A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:  
  a. an unobstructed width of no less than 3.5m;  
  b. an unobstructed height of no less than 4.8m;  
  c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;  
  d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point. |

| RAD26 | On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment*. |

| RAD27 | For development that contains on-site fire hydrants external to buildings:  
  a. those external hydrants can be seen from the vehicular entry point to the site; or  
  b. a sign identifying the following is provided at the vehicular entry point to the site:  
    i. the overall layout of the development (to scale);  
    ii. internal road names (where used);  
    iii. all communal facilities (where provided);  
    iv. the reception area and on-site manager’s office (where provided); |
v. external hydrants and hydrant booster points;
   vi. physical constraints within the internal roadway system which would restrict access by fire
   fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

a. in a form;
b. of a size;
c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

RAD28  For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

| RAD36 | Operates as follows:
   a. No more than 2 days in any week;
   b. No more than 50 individual stalls;
   c. All activities, including set-up and pack-up, occur within the hours of 7.00am and 3.00pm; |
d. No use of amplified music, public address systems and noise generating plant and equipment;
e. Waste containers are provided at a rate of 1 per food stall and 1 per 4 non-food stalls.

**Telecommunications facility**

Editor's note - In accordance with the Federal legislation Telecommunications facilities must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300GHz.

**RAD37** A minimum area of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

**RAD38** The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

**RAD39** Equipment shelters and associated structures are located:

a. directly beside the existing equipment shelter and associated structures;
b. behind the main building line;
c. further away from the frontage than the existing equipment shelter and associated structures;
d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

**RAD40** Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.

**RAD41** The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

**RAD42** A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.

**RAD43** All equipment comprising the telecommunications facility(81) which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

**Values and constraints requirements**

Note - The relevant values and constraints requirements do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

**Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following requirements apply)**

Note - Planning scheme policy - Acid sulfate soils provides guidance for requirements for accepted development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

**RAD44** Development does not involve:
a. excavation or otherwise removing of more than 100m$^3$ of soil or sediment where below 5m Australian Height Datum AHD, or

b. filling of land of more than 500m$^3$ of material with an average depth of 0.5m or greater where below the 5m AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following requirements apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

RAD45  

a. Building and structures are:
   
i. not located on a ridgeline
   
ii. not located on land with a slope greater than 15% (see Overlay map – Landslide hazard)

b. Dwellings are located on east to south facing slopes.

RAD46  

Buildings and structures have contained within the site:
a. a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
   i. to, and around, each building and other roofed structure; and
   ii. to each fire fighting water supply extraction point.

Note: The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959.

**RAD47**

The length of driveway:

a. to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
b. has a maximum gradient no greater than 12.5%;
c. have a minimum width of 3.5m;
d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services’ Fire Hydrant and Vehicle Access Guideline.

**RAD48**

a. A reticulated water supply is provided by a distributor retailer for the area or, where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures.
b. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access to within 3m of that water storage source is provided.
c. Where a tank is the nominated on-site fire fighting water storage source, it includes:
   i. a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;
   ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.

**RAD49**

Development does not involve the manufacture or storage of hazardous chemicals.

**Environmental areas (refer Overlay map - Environmental areas to determine if the following requirements apply)**

Note: The following are excluded from the native clearing provisions of this planning scheme:

a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where accepted development under Part 1.1.7.7 Accepted development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this requirement primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors’ Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council’s website for details.

Editors’ Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

### RAD50

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house(22) or extension to an existing dwelling house(22) only on lots less than 750m².

Editor’s note - See in heading above for other uses excluded from native vegetation clearing requirements.

Editor’s note - Where vegetation clearance is accepted development subject to requirements, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

i. co-locating all associated activities, infrastructure and access strips;
ii. be the least valued area of koala habitat on the site;
iii. minimise the footprint of the development envelope area;
iv. minimise edge effects to areas external to the development envelope;
v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas;
vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor’s note - Where vegetation clearing is accepted development subject to requirements, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

### RAD51

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:
6 Zones

| a. | Clearing of native vegetation located within an approved development footprint; |
| b. | Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency; |
| c. | Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure; |
| d. | Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence; |
| e. | Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes; |
| f. | Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council; |
| g. | Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens; |
| h. | Grazing of native pasture by stock; |
| i. | Native forest practice where accepted development under Part 1, 1.7.7 Accepted development. |

Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following requirements apply)

RAD52 Development does not result in more than one dwelling house per lot within separation areas.

RAD53 Development within the separation area does not include the following uses:

   a. caretaker's accommodation;
   b. community residence;
   c. dual occupancy;
   d. dwelling unit;
   e. hospital;
   f. rooming accommodation;
   g. multiple dwelling;
   h. non-resident workforce accommodation;
   i. relocatable home park;
   j. residential care facility;
   k. resort complex;
   l. retirement facility;
   m. rural workers’ accommodation;
   n. short-term accommodation;
   o. tourist park.

RAD54 All habitable rooms within the separation area are:

   a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;
   b. provided with mechanical ventilation.

RAD55 Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following requirements apply)

RAD56 The following uses are not located within the 100m wide transport route buffer:

   a. Caretaker’s accommodation, except where located in the Extractive industry zone;
   b. Community residence;
| c. | Dual occupancy |
| d. | Dwelling house |
| e. | Dwelling unit |
| f. | Hospital |
| g. | Rooming accommodation |
| h. | Multiple dwelling |
| i. | Non-resident workforce accommodation |
| j. | Relocatable home park |
| k. | Residential care facility |
| l. | Resort complex |
| m. | Retirement facility |
| n. | Rural workers’ accommodation |
| o. | Short-term accommodation |
| p. | Tourist park |

RAD57 Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resource transport route.

RAD58 A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following requirements apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

RAD59 Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

RAD60 A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

RAD61 Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

RAD62 The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

a. construction of any building;

b. laying of overhead or underground services;
c. any sealing, paving, soil compaction;
d. any alteration of more than 75mm to the ground surface level prior to work commencing.

**RAD63**
Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

### Landslide hazard (refer Overlay map - Landslide hazard to determine if the following requirements apply)

**RAD64**
Development does not:

a. involve earthworks exceeding 50m³;
b. involve cut and fill having a height greater than 600mm;
c. involve any retaining wall having a height greater than 600mm;
d. redirect or alter the existing flow of surface or groundwater.

### Buildings, excluding domestic outbuildings:

**RAD65**

a. are split-level, multiple-slab, pier or pole construction;
b. are not single plane slab on ground.

**RAD66**
Development does not involve the manufacture, handling or storage of hazardous chemicals.

### Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following requirements apply)

**RAD67**
Development does not include the following uses within a Wastewater treatment site buffer:

a. Caretaker’s accommodation;
b. Community residence;
c. Dual occupancy;
d. Dwelling house;
e. Dwelling unit;
f. Hospital;
g. Rooming accommodation;
h. Multiple dwelling;
i. Non-resident workforce accommodation;
j. Relocatable home park;
k. Residential care facility;
l. Resort complex;
m. Retirement facility;
n. Rural workers’ accommodation;
o. Short-term accommodation;
p. Tourist park.

**RAD68**
Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

**RAD69**
Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

**RAD70**
Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):

a. buildings or structures;
b. gates and fences;
<p>| RAD71 | On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected. |
| RAD72 | On-site sewerage facilities in a Water supply buffer for a dwelling house(^{(22)}) include: |
| |   a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time; |
| |   b. a reserve land application area of 100% of the effluent irrigation design area; |
| |   c. land application areas that are vegetated; |
| |   d. the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area); |
| |   e. wastewater collection and storage systems must have capacity to accommodate full load at peak times. |
| RAD73 | On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging. |
| RAD74 | Development involving Permanent plantation(^{(59)}) within a Water supply buffer maintains a minimum of 30% ground cover at all times. |
| RAD75 | Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer. |
| RAD76 | Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer. |
| RAD77 | Development does not involve the construction of any buildings or structures within the Gas pipeline buffer. |
| RAD78 | Development does not include the following uses located within a landfill site buffer: |
| |   a. caretaker’s accommodation(^{(10)}); |
| |   b. community residence(^{(16)}); |
| |   c. dual occupancy(^{(21)}); |
| |   d. dwelling house(^{(22)}); |
| |   e. dwelling unit(^{(23)}); |
| |   f. hospital(^{(36)}); |
| |   g. boarding accommodation(^{(69)}); |
| |   h. multiple dwelling(^{(49)}); |
| |   i. non-resident workforce accommodation(^{(52)}); |
| |   j. relocatable home park(^{(62)}); |
| |   k. residential care facility(^{(65)}); |
| |   l. resort complex(^{(66)}); |
| |   m. retirement facility(^{(67)}); |
| |   n. rural workers’ accommodation(^{(71)}); |
| |   o. short term accommodation(^{(77)}); |
| |   p. tourist park(^{(84)}). |
| RAD79 | All habitable rooms located within an Electricity supply substation buffer are: |
| |   a. located a minimum of 10m from an electricity supply substation(^{(80)}); and |
| |   b. acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008. |</p>

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

**Scenic amenity - Regionally significant (Hills) and Locally important (Coast) - (refer Overlay map - Scenic amenity to determine if the following requirements apply)**

| **RAD87** | Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not: |
a. located on a hill top or ridge line; and
b. all parts of the building and structure are located below the hill top or ridge line.

Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

RAD88 Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

a. go across land contours and do not cut straight up slopes;
b. follow natural contours, not resulting in batters or retaining walls being greater than 1m in height.

RAD89 Where located in the Regionally significant (Hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:
### Colours from Australian Standard AS2700s – 1996
