Pine Rivers Shire Council

Planning Scheme Policy

PSP21 Development Contributions for Trunk Infrastructure – Administration Policy
Planning Scheme Policy for Pine Rivers Shire

PSP21 Development Contributions for Trunk Infrastructure – Administration

ADOPTION
Pine Rivers Shire Council adopted this planning scheme policy on 19 June 2006.

COMMENCEMENT
This planning scheme policy took effect from 15 December 2006.

Amendment 2/2008
ADOPTION OF AMENDMENT
Moreton Bay Regional Council adopted this amendment to the planning scheme policy on 19 August 2008.

COMMENCEMENT OF AMENDMENT
This amendment to the planning scheme policy took effect from 1 September 2008.

I, John Rauber, Chief Executive Officer, of the Moreton Bay Regional Council, hereby certify that this document is a true copy of the original.

John Rauber
Chief Executive Officer

PSP 21 – DEVELOPMENT CONTRIBUTIONS FOR TRUNK INFRASTRUCTURE – ADMINISTRATION POLICY

Head of Power

This document is a Planning Scheme Policy for the purposes of the Integrated Planning Act 1997 (the Act) and is made in compliance with the process prescribed in Schedule 3 of the Act.

Objective

The objective of this policy is to set out and clarify the administrative provisions for the Development Contributions Policies PSP 22-27 and the formulation of Infrastructure Agreements in accordance with the provisions of the Integrated Planning Act 1997, as amended.

Definitions/Application

Application

This policy is to be read in conjunction with the Development Contributions Policies, which set out the detailed provisions for the determination of Infrastructure Contributions for development. It applies to all assessable development which will utilise any of the following Infrastructure Networks:

- Water Supply Trunk Infrastructure;
- Sewerage Trunk Infrastructure;
- Stormwater Quality and Quantity Trunk Infrastructure;
- Council Trunk Road Infrastructure;
- Open Space Trunk Infrastructure; and
- Bikeways Trunk Infrastructure.

Definitions

Schedule A “Definitions” provides the meaning for a number of critical terms used in this policy and in the other Development Contributions Policies PSP 22-27. For the meaning of terms not included in Schedule A refer to Schedule 10 of the Integrated Planning Act and Part 7 of the PineRiversPlan.

Policy Statement

1 Scope

This planning scheme policy sets out:

- the overall outcomes sought for trunk infrastructure provision in the former Pine Rivers Shire
- how to determine if a proposal is Consistent or Unanticipated Development;
- the procedures for determining Infrastructure Contributions (including contributions for additional Trunk Infrastructure Costs) for various scenarios;
- times for payment of Infrastructure Contributions;
- alternatives to paying Infrastructure Contributions;
- the procedure for entering into Infrastructure Agreements;
- the procedures for determining and dealing with Infrastructure Credits;
- instances in which securities will need to be lodged with Council;
- procedures for recording Infrastructure Contributions and maintaining Contributions Registers; and
- critical trunk infrastructure related information to be provided with development applications.

This policy only deals with infrastructure provided for, or on behalf of, Council. It specifically does not deal with the policies and procedures of State Government infrastructure providers.

This policy is not to be construed, in any way, to limit the Assessment Manager’s powers in deciding a development application.
2 Trunk Infrastructure Provision

Trunk Infrastructure Provision

Under normal arrangements, Trunk Infrastructure which is consistent with the Plans for Trunk Infrastructure and within the Designated Infrastructure Services Area will be provided for in Council’s budget and constructed by the Council as programmed in the Council’s Capital Works Program.

The Plans for Trunk Infrastructure do not represent the Council’s Capital Works Program. They do, however, form a direct input into the determination of the Capital Works Program. For the purpose of clarity, the Plans for Trunk Infrastructure are not meant in any way to place a rigid obligation on the Council as to the amount and timing of the construction of Trunk Infrastructure.

Where a development is undertaken within the Designated Infrastructure Services Area, and the infrastructure required by the development is anticipated to be available within the timeframe proposed by the development proponent, the responsibility of the development proponent in regard to the provision of Trunk Infrastructure will generally be limited to the payment of Infrastructure Contributions.

The imposition of an Infrastructure Contribution condition in a development approval does not automatically entitle a development proponent to the immediate construction of any Trunk Infrastructure as may be necessary to service the development.

The provision of infrastructure not identified as Trunk Infrastructure will generally be the responsibility of the development proponent. Contributions for Trunk Infrastructure will apply to a development irrespective of the conditions imposed for the provision of Non-Trunk Infrastructure.

Where the Council agrees to the provision of Trunk Infrastructure by the development proponent in lieu of payment of Infrastructure Contributions, an Infrastructure Agreement will be required.

The items of Trunk Infrastructure used in determining Infrastructure Contribution Rates are listed out in the Plans for Trunk Infrastructure.

Alternative Infrastructure

Alternative infrastructure may be provided with Council’s agreement in lieu of that identified in the Plans for Trunk Infrastructure, provided that:-

- A written report describing the alternative infrastructure, examining the costs and benefits to the community, along with economic, social, environmental and operational considerations has been lodged with Council for consideration. Specifically, the impact of alternative infrastructure on the roll out of Council’s planned infrastructure program must be addressed.
- The development proponent can prove by appropriate studies that the alternative infrastructure can provide at least the same Desired Standard of Service as that previously planned.
- The service provided to existing and other anticipated development will not be compromised in respect of quantity, quality nor the timing of service.
- The operating, maintenance and other life cycle costs will not place an unacceptable cost burden on Council.
- The proponent meets all costs incurred by Council in assessing and testing the alternative infrastructure proposal, and the amendment of all planning documents, as well as all necessarily associated costs. These costs must be agreed and paid to Council before it undertakes the assessment of the alternative proposal.

Temporary Infrastructure

It is the Council’s intention to minimise the use of temporary works. The use of temporary infrastructure will only be permitted in exceptional circumstances, and only after Council has considered a written report examining the costs and benefits to the community, along with economic, social, environmental and operational considerations. Specifically, the impact of temporary works on the roll out of Council’s planned infrastructure program must be assessed.

Where the Council determines that no viable arrangement for providing trunk infrastructure to service the development currently exists, it may permit the development proponent to construct temporary external Non-Trunk Infrastructure to connect the development to existing Trunk Infrastructure of sufficient capacity at the development proponent’s cost.

The construction of temporary works in such instances would ordinarily be required by the Council as a condition of development approval.
All costs associated with the construction, maintenance and subsequent removal, where required, of the temporary works are to be borne by the development proponent, and the development proponent will not be eligible for Infrastructure Credits for these temporary works.

The Council may require the lodgement of a specified security to cover the payment of operation and maintenance costs of the temporary infrastructure, as well as the subsequent removal of that infrastructure.
3 Assumptions in the Plans for Trunk Infrastructure

A number of critical issues have been examined and used by Council in the development of the Plans for Trunk Infrastructure. The primary issues that have shaped those Plans are:-

- the Designated Infrastructure Service Area (DISA); and
- the Planning Assumptions.

3.1 The Designated Infrastructure Service Area (DISA)

The DISA generally defines, by plan, those areas within the Shire where Council is supportive of urban development. It indicates where provision of development infrastructure is anticipated in order to enable development of land for purposes consistent with the projections and assumptions about future development under the PineRiversPlan.

The DISA corresponds to the existing urban area and that part of the future urban area which Council anticipates will accommodate 10 years growth for residential, retail, commercial, industrial as well as associated community and government purposes.

The DISA concept is used to enable Council to better integrate infrastructure provision, to minimise cost and Council debt and to optimise the levels of service sought by the community. The DISA includes areas currently, or intended to be, serviced by the water supply network, but may also include areas not intended to be serviced by the sewerage network.

The DISA includes some areas where Infrastructure Agreements are in place. The future growth within those areas will be in accordance with the terms and conditions of the infrastructure agreements, and this has been taken into account in the assessment of future infrastructure and revenue projections for Council.

All areas identified for urban development in the PineRiversPlan and located within the DISA are within the Urban Footprint of the SEQ Regional Plan.

Council's adopted DISA for the Pine Rivers Shire is shown on the map in Schedule C.

3.2 Planning Assumptions - General

As part of the preparation of its draft Local Growth Management Strategy (LGMS) during 2006 – 2007, the Pine Rivers Shire Council (PRSC) produced forecasts of population and employment for the period 2006 to 2026. This work has been undertaken internally by Council and has had regard to forecasts of population and employment prepared, respectively, by the Planning Information and Forecasting Unit within the Department of Local Government and Planning (PIFU), and by the National Institute of Employment and Industry Research (NIEIR).

The Planning Assumptions detail the type, scale and timing of future development anticipated for the Pine Rivers Shire under the current version of the PineRiversPlan to 2026.

The Planning Assumptions are made in quantitative terms and address the various components for each form of development infrastructure. They include, but are not confined to, assumptions in respect of:

- Population growth;
- Lot or dwelling yield;
- Employment growth and
- Demand generation.

The Planning Assumptions were prepared in a form that allows consistent planning of infrastructure required to service a development site or service catchment to the level prescribed by the Desired Standards of Service.

The Planning Horizon varies slightly for the different networks, due to the different nature of the networks (closed and open) and the methodologies employed in planning the network. The Planning Horizons applied in this context are as follows:

- Water Supply, Sewerage and Stormwater Planning Horizon – the period to full development of the Shire assuming densities consistent with the PineRiversPlan and the Dakabin, Mango Hill and Griffin Local Area Plans; and
- Transport and Open Space Planning Horizon – the period from 2006-2026.
It should be noted that different types of infrastructure by their very nature have different service catchments. To accommodate this variance, the anticipated growth in Population, Employment and Infrastructure Demand was distributed to allotment level, allowing the growth assumptions to be aggregated in any way required, i.e. to the different Service Catchments specific to the Infrastructure Networks, thereby enabling a consistent set of assumptions to be used for all Infrastructure Network Plans.

### 3.4 Employment Estimates

#### Council’s Employment Forecasts

Council has developed employment scenarios by industry type and location which were input into infrastructure modelling. Council estimates of employment from its GIS analysis for 2006 and future years are higher than the NIER forecast and may be higher again once master planning for the investigation areas nominated in the draft LGMS has been completed. The major changes are anticipated in the SLA’s of Mango Hill, North Lakes, Strathpine and Brendale and in the industry categories of Manufacturing, Wholesale Trade, Retail Trade, Finance, Property and Business services, Public Administration and Defence, and Community Services.

</table>
A conversion factor was then applied to the employment forecasts to calculate floor space and the results are shown in Table 3.4B. Council’s estimates of employment were prepared for all two digit Australian and New Zealand Standard Industrial Classification (ANZSIC) industry employment by place of work for each SLA. These forecasts were summed for each Employment Category and then the conversion rate applied. Employment totals and floor space totals were summed for each Employment Type to produce Table 3.4A.

4 Determination of Infrastructure Contributions for Assessable Development

Infrastructure Contributions are determined in accordance with the principles outlined in this policy and those Development Contributions Policies PSP 22-27 applicable to the Trunk Infrastructure Networks which serve the development.

4.1 Application

This policy applies to all development on land within the Shire which has been made assessable by the PineRiversPlan and for which trunk infrastructure service capacity has been allocated.

Infrastructure Contributions calculated using the Development Contributions Policies will be imposed as conditions of development approval for such development.

4.2 Assessment of Development Applications against Assumptions

All assessable development will be assessed with reference to the DISA. Development applications over land that is located outside or partially outside of the DISA, if approved, must meet any additional costs borne by Council in servicing the proposed development, and, before approval, an Infrastructure Agreement would normally be required.

Applications will be assessed against the Assumptions on which planning of the Trunk Infrastructure networks was based.

A proposal is considered consistent with the planning assumptions if it meets the following criteria:-

(1) The proposal falls within the DISA; and

(2) The proposal is for, or is normally associated with, a land use which is indicated as a 'consistent' use in the zone assessment tables for the locality applicable to the land and which meets all of the applicable development requirements prescribed for that land use in the PineRiversPlan;

(3) If the proposal relates to Residential Development:-
   The actual density of development is within 5% of the assumed density per hectare of “Developable Area” is shown on the maps in Schedule D – ‘Residential Density Assumptions’.

(4) If the proposal relates to Non-Residential Development:-
   Determine the “Developable Area” and apply the Assumed Floor Space Area Ratio for the applicable Zone found in Table 3.4C. Applications for commercial/indust rial development are considered consistent with assumptions if they fall within the Assumed Floor Space Area per hectare “Developable Area” or within 5% of this figure.

   AND

   For Water Supply Trunk Infrastructure: The consumption proposed for non-residential uses does not exceed the assumptions for Water Supply as shown in PSP22, Table 3.3A.

   AND

   For Sewerage Trunk Infrastructure: The load proposed for non-residential uses does not exceed the assumptions for Sewerage as shown in PSP23, Table 3.3A; and

(5) All of the Trunk Infrastructure needed to service the development is anticipated to be available within the timeframe in which it is required by the development.

Consistent Applications

A development proposal, which was found to be consistent with the planning assumptions, will be subject to Type 1 Assessment only for the calculation of applicable infrastructure contributions.

It is recognised that not all development within the DISA will occur at exactly the demand or density assumed. Council accepts that a demand or density of up to 5% above the assumed levels set out in the assumptions tables is not likely to significantly affect the design or timing of provision of the infrastructure within the period between reviews of the complete suite of infrastructure policies. Hence, where a development within the DISA conforms with all planning assumptions except demand or density, but the development is no more than 5% above of those demand and density assumptions, then Infrastructure Contributions will be calculated using a Type 1 Assessment only.
Unanticipated Development

Council may be prepared to support a development application for Unanticipated Development, if the approval would not result in an inefficient or deficient infrastructure network and is not likely to create an adverse cost impact for the Council. The entrepreneurial risk associated with such development is not to be transferred to Council under any circumstance.

In those instances where Council is prepared to approve unanticipated development, it would normally require the development proponent to enter into an Infrastructure Agreement in accordance with Section 5 of this document prior to issuing an approval.

For the determination of Infrastructure Contributions for such applications, Council will undertake both Type 1 Assessment and Type 2 ATIC (Additional Trunk Infrastructure Cost) Assessment.

4.3 Type 1 Assessment

The base level Infrastructure Contributions are calculated using a Type 1 assessment and the Calculation Formula set out in Section 6.

Since Council’s Infrastructure Contribution Regime is based on the assumptions set out in Section 3 above, development proponents should note that development proposals which under-develop the site will be charged for the Trunk Infrastructure demand assumed for the networks.

Notwithstanding the above, Council recognises that the assumptions have been derived using an averaging process, and as such may not be achievable for every development proposal given the constraints of planning scheme requirements for site specific issues. If the applicant can demonstrate to Council’s satisfaction that the level of assumptions for the site cannot be achieved, Council will take this into account when determining the amount of any infrastructure contributions to be imposed.

Determining the Quantum of Contribution:-

The demand factor tables for each network as shown in PSP22-27 are used to determine the demand for both the proposal and the overall development. If the proposal is for a land use not listed in those tables, the applicant is required to demonstrate which land use the proposal most closely aligns with.

Applications will be assessed against the Planning Assumptions. The assumed demand for the site is calculated as set out in Section 4.2. However, in doing so, Council will have regard to any site specific limitations to achieving this demand in determining the extent of development possible on the site.

If the demand determined for the proposal is higher than that assumed for the site, the amount of the required contribution will be determined using the proposed level of demand.

If the demand calculated for the actual proposal is less than the assumed demand or that possible for the site, the amount of the required contribution will be determined using the assumed demand.

Payment of Contributions:-

Nothing in these policies precludes the development proponent from entering into an infrastructure agreement with Council to address staged payment of contributions for what is clearly staged development of land.

Unless otherwise determined in an Infrastructure Agreement, Infrastructure contributions are payable at the Infrastructure Contribution Rate applicable at the time that the contribution is paid.

4.4 Type 2 Additional Trunk Infrastructure Cost (ATIC) Assessment

General Requirements

Unanticipated Development as described in Section 4.2 of this document will generally attract a contribution for Additional Trunk Infrastructure Cost (ATIC), assuming Council decides to approve the development. In any case, Council will require that the development proponent enter into an Infrastructure Agreement with Council prior to the issue of a development approval.

Applications for development proposals that vary from the planning assumptions are required to contain detailed infrastructure reports that enable the impact of the development on the Trunk Infrastructure networks, and in particular the effect on the capacity and timing of infrastructure provision stated in the Plans for Trunk Infrastructure, to be determined.
Assuming that Council is prepared to issue a development approval for the proposal, it will undertake Type 1 assessment and also determine whether or not the requirement for payment of an ATIC is warranted in the context. These may be included as conditions of subsequent development approval or be addressed through some similar mechanism in the Infrastructure Agreement.

Any development approval requiring the payment of an ATIC will normally include conditions requiring the construction of any Trunk Infrastructure needed to ensure the proposed development does not adversely impact upon, or compromise, the ability of Council to provide a service (at the Desired Standard of Service) to both existing development and other development provided for in the Plans for Trunk Infrastructure, which has not yet been established.

**Calculation of ATIC**

For unanticipated development **within the DISA** requiring the provision of new or upgraded Trunk Infrastructure, the scope of a contribution for ATIC may include, but not be limited to:-

- The additional financing costs for the Trunk Infrastructure as brought forward in time;
- The establishment cost of the additional Trunk Infrastructure required to service the development; and
- The cost of amending the Plans for Trunk Infrastructure.

For unanticipated development **Outside or Partially Outside of the DISA** requiring the provision of new or upgraded Trunk Infrastructure, the scope of a contribution for ATIC may include but not be limited to:-

- The full establishment cost of the Trunk Infrastructure;
- The establishment, operating and maintenance costs for any temporary infrastructure required as part of the development for a period of up to 5 years;
- The decommissioning, removal and rehabilitation costs of any temporary infrastructure;
- The maintenance and operating cost of the items of new or upgraded Trunk Infrastructure for up to 5 years; and
- The cost of amending the Plans for Trunk Infrastructure.

The Council may also require the development proponent to enter into an Advance Funding Infrastructure Agreement in accordance with Section 5 of this document to cover such costs.

**4.5 Infrastructure Specific Information to be supplied with Development Applications**

This Subsection details the extent of Infrastructure specific information which must be provided as part of any Development Application to allow the assessment of the proposal against the Planning Assumptions for Trunk Infrastructure, and the calculation of, Trunk Infrastructure Contributions.

Development applications must include sufficient information to allow determination of the scope and extent of new infrastructure required to service the development. Such information is to include a detailed program of development showing the timing and sequencing of development activities. Council will use that information to determine the new Trunk Infrastructure, if any, required to service the development, the appropriate timing for the provision of the Trunk Infrastructure and the manner in which it is to be funded.

Information that needs to be provided with the development application includes (but is not limited to):-

- Whether the land is within, or outside of the DISA;
- A comparison of the proposed development against the planning assumptions, i.e. the density and development demands proposed under the development application;
- The Trunk Infrastructure requirements to service the development to the Desired Standards of Service identified in PSP22-27;
- Documented details of consultation already undertaken with Infrastructure Providers (including State and other), if undertaken;
- Complete details of any probable variation from the extent, scale, form or timing of infrastructure detailed within the Plans for Trunk Infrastructure that is likely to arise as a result of the establishment of the development;
- An accurate schedule of development implementation in regard to the provision of trunk infrastructure;
- Complete details of any existing demand generated on the site;
- Complete details of any Infrastructure Credits applicable;
• Complete details of any proposed Non-Trunk Infrastructure external to the development site; and
• Identification of those Trunk Infrastructure Items “Critical” to the commencement of the use and those that could be “Deferred”.

4.6 Time for Payment of Infrastructure Contributions including Contributions for ATIC

The times for payment of base level Infrastructure Contributions and any contributions for ATIC under this policy are the same as those times established for payment of Infrastructure Contribution and Additional Trunk Infrastructure Costs under Chapter 5 of the Integrated Planning Act 1997 as in force on 25 March 2005.

4.6.1 Time for Payment of Base Level Infrastructure Contributions

Unless some different time for payment is prescribed in either a condition of development approval or an Infrastructure Agreement, the time for payment of Base Level Infrastructure Contributions under this policy is:—

(a) If the contribution applies to Reconfiguring a Lot – before Council approves the plan of subdivision; or
(b) If the contribution applies to a Material Change of Use involving assessable building work – before the Certificate of Classification or other clearance certificate for the building work is issued; and
(c) If the contribution applies to a Material Change of Use (not followed by an application for Reconfiguring a Lot or involving assessable for building work) – before the change of use happens.

4.6.2 Time for Payment of Contributions for Additional Trunk Infrastructure Cost (ATIC)

The time for payment of an Additional Trunk Infrastructure Cost is as stated in either a condition of development approval or an Infrastructure Agreement.
5 Agreements about, and alternatives to, paying Trunk Infrastructure Contributions

Any Infrastructure Agreement must be in writing, be prepared at no cost to the Council and be in a form acceptable to Council.

5.1 Situations where Infrastructure Agreements are used

An Infrastructure Agreement (IA) must be entered into in the following situations:

(a) where Council agrees to the development proponent supplying all or part of the necessary infrastructure instead of making a monetary contribution; or

(b) where Council is prepared to support a development application for unanticipated development to which an ATIC applies; and

(c) where otherwise required by Council.

5.2 Infrastructure Agreement Content

Any Infrastructure Agreement must be in writing and be prepared either by the Council at the development proponent’s cost, or by the development proponent using documents that are in a form acceptable to Council.

Every Infrastructure Agreement must adequately address those matters prescribed in Chapter 5, Part 2 of the Integrated Planning Act 1997, and unless otherwise agreed by Council, must:-

(a) bind successors in title in with the manner prescribed in Section 5.2.5 of IPA;

(b) identify the applicable Networks of Trunk Infrastructure to which it applies;

(c) state the planning assumptions used to determine the necessary infrastructure works;

(d) contain a plan identifying the area to be serviced by the Trunk Infrastructure;

(e) details the anticipated staging of the development;

(f) state the calculated equivalent demand imposed by the development on each network;

(g) list the Trunk Infrastructure to be contributed for each component or hierarchy of the network;

(h) prescribe the Trunk Infrastructure to be provided, including a detailed description, design criteria and construction details, and the works program for its provision;

(i) prescribe the responsible entity for the funding, design and construction of the Trunk Infrastructure including land acquisition;

(j) prescribe the date for receipt of any contributions;

(k) state the nature of any security to be lodged and the details of the subsequent use or release of such security;

(l) provide details in relation to maintenance of the infrastructure, including responsibilities for general maintenance activities, anticipated maintenance costs and responsibility for maintaining infrastructure performance (rectification of defects);

(m) state the Infrastructure Credits to be accrued by, and attributed to, the development as well as the extent of any that are in excess of the Infrastructure Contributions applicable to the development;

(n) detail any estimated refunds to be paid from other users who will benefit from the Trunk Infrastructure the subject of the Infrastructure Agreement;

(o) either:

(i) indicate whether or not the Council will permit the early accrual of Infrastructure Credits where a development proponent does not have any Infrastructure Credits but has substantially completed infrastructure works; and

(ii) the process of dedicating land for infrastructure purposes which upon completion/registration will entitle the development proponent to accrue Infrastructure Credit;

(p) provide details of any approved temporary works and the entity responsible for meeting the costs associated with the operation and maintenance of these items for a period of five years;

(q) make provision for modification to the agreement, at Council’s discretion, where issues of timing, other development or another Infrastructure Agreement entered into by Council warrants such modification; and

(r) include any other details considered appropriate by the Council.
5.3 **Infrastructure Agreements for Advance Funding Arrangements**

Where Trunk Infrastructure is programmed in Council’s Capital Works Program, but current funding from Infrastructure Contributions is insufficient for the purpose at the programmed date, or the construction of the Trunk Infrastructure needs to be brought forward, the Council at its sole discretion may require the development proponent to enter into an Infrastructure Agreement to provide advance funding for the infrastructure.

Such an Infrastructure Agreement is referred to for the purposes of this Planning Scheme Policy as an ‘Advance Funding Infrastructure Agreement’.

Unless otherwise agreed between the parties to the agreement, funding arrangements will involve the full reimbursement by the Council for the amount of advance funding for the purposes of constructing an Item of Trunk Infrastructure.

5.4 **Infrastructure Agreements for Trunk Infrastructure Construction for Consistent Development**

Under the Council’s preferred arrangements, within the DISA, programmed Trunk Infrastructure will be constructed or acquired by the Council, and monetary contributions will be taken for consistent development.

However, the Council at its sole discretion may enter into an agreement with the development proponent for that entity to construct or dedicate Trunk Infrastructure. The works constructed must be consistent with the Plans for Trunk Infrastructure.

The development proponent will be reimbursed for the provision of the Trunk Infrastructure through an Infrastructure Credit in accordance with Section 5.6 of this policy.

5.5 **Infrastructure Agreements for Unanticipated Development**

5.5.1 **General Matters**

Where the Council supports a development proposal that is either inconsistent with the Planning assumptions or outside of the DISA, it may refuse the application or make any approval conditional upon the development proponent and Council entering into an Infrastructure Agreement.

One of the primary purposes of the Infrastructure Agreement is to ensure the appropriate and timely provision of infrastructure to the development without compromising the Desired Standard of Service to existing and planned development allowed for in the Planning assumptions. The nature, extent, sequencing and timing of infrastructure works to meet these requirements is to be determined in detailed infrastructure reports provided by the development proponent.

In addition to those content issues outlined in Section 5.2 of this policy, the Infrastructure Agreement must include specific provisions aimed at ensuring that:-

(a) existing and planned users within the DISA are not disadvantaged as a result of servicing the unanticipated development.

(b) the strategy adopted for provision of infrastructure will result in no financial disadvantage to Council;

(c) Council is indemnified against the risk associated with the expenditure that may be incurred by Council and any economic risk posed by the development.

(d) the proposed infrastructure will be compatible with, and will form part of, the Council’s scheme for the area.

(e) the development proponent takes responsibility for the design and establishment of those parts of the systems required to service the development in accordance with relevant Council standards and a strategy approved from time to time by Council.

(f) the contributions for ATIC required under any condition of development approval are paid to Council.

5.5.2 **Accelerated Trunk Infrastructure required for Out of Sequence Development**

Where the relevant Trunk Infrastructure required to service the development is programmed in the Council’s Capital Works Program but the development necessitates that its construction be brought forward, any development approval that may be issued will be conditional upon the development proponent entering into an Infrastructure Agreement for construction of the Trunk Infrastructure at the development proponent’s cost.
The development proponent will be eligible for Infrastructure Credits determined in accordance with Section 5.6 of this policy.

The Council may impose the requirement for a contribution for ATIC to cover the cost impact of the “bring forward” of construction as a condition of development approval.

The Trunk Infrastructure to be provided may be required to also meet the demands of other anticipated development in the vicinity. In such instances, the development proponent will be required to fund all Trunk Infrastructure necessary to service that defined area or planned population of proposed and future development.

The Infrastructure Agreement may contain provision for refunding payments from future users of the infrastructure at the time the contributions are collected from those future users or at the time that the Item of Trunk Infrastructure subject of the Infrastructure Agreement was scheduled for construction in the Council’s Capital Works Program, whichever is the later. Unless the payments made by future users are reduced contributions under Section 11 of this policy, the refunds, as determined by Council, will be generally:-

(a) limited to the monetary equivalent of the excess Infrastructure Credits accrued by the development proponent for the provision of the Trunk Infrastructure at the time the excess Credits are accrued, and

(b) indexed to values current at the time the refund is issued by applying the Consumer Price Index (All Groups) for the City of Brisbane as published by the Australian Bureau of Statistics.

Where the payments made by future users are reduced contributions, the monetary value of any refund made to the developer who provided the new infrastructure will be calculated using the methodology prescribed in Section 5.6.4 of this policy.

5.5.3 Trunk Infrastructure outside the DISA

Where construction of Trunk Infrastructure outside of, or to service development outside of the DISA, the development proponent will be required to enter into an Infrastructure Agreement confirming construction of the Trunk Infrastructure at the development proponent’s cost.

Such an agreement would be required in instances where:-

(a) planned Trunk Infrastructure outside of the DISA is established prior to infrastructure needed within the DISA being available simply to meet the needs of a proposed development; or

(b) the Trunk Infrastructure is required to ensure that the capacity to develop inside the DISA is not compromised by the development outside of the DISA; and

(c) the Trunk Infrastructure is otherwise required to service development outside of the DISA.

The Trunk Infrastructure to be provided under the agreement must provide the capacity to service the development plus that specified within the Plans For Trunk Infrastructure including “spare capacity” for other users within the general proximity of the site, i.e. capacity that may be required to service areas additional to the site covered by the development application to meet the demands of future anticipated development in that general vicinity. The development proponent is to fund all Trunk Infrastructure necessary to service that defined area or planned population of proposed and future anticipated development.

The development proponent may be eligible for Infrastructure Credits determined in accordance with Section 5.6 of this policy.

The Infrastructure Agreement may contain provision for refunding payments from future users of the infrastructure at the time the contributions are collected from those future users or at the time that the Item of Trunk Infrastructure subject of the Infrastructure Agreement was scheduled for construction in the Council’s Capital Works Program, whichever is the later. The refunds, to be determined by Council, will be generally:-

(a) limited to the monetary equivalent of the excess Infrastructure Credits accrued by the development proponent for the provision of the Trunk Infrastructure at the time the excess Credits are accrued, and

(b) indexed to values current at the time the refund is issued by applying the Consumer Price Index (All Groups) for the City of Brisbane as published by the Australian Bureau of Statistics.

Where the payments made by future users are reduced contributions, the monetary value of any refund made to the developer who provided the new infrastructure will be calculated using the methodology prescribed in Section 5.6.4 of this policy.
5.5.4 Land Transfers

Under Council's regime for infrastructure contributions, land acquisition costs have been included in the establishment cost of Trunk Infrastructure, and the responsibility of the development proponent will be generally limited to payment of Infrastructure Contributions determined in accordance with the Development Contributions Policies.

However, land to service development either inside or outside of the DISA would normally be required in instances where:-

(a) Trunk Infrastructure including land is planned on the site of a development application and Council agrees to land being provided in lieu of a monetary contribution; or

(b) Council specifically requires the transfer of part of that site to form part of the Trunk Infrastructure network.

The need for land transfers will be determined as part of the development assessment process.

Where transfer of land for Open Space is either accepted or specifically required by Council, the development proponent may be eligible for Infrastructure Credits determined in accordance with Section 5.6 of this policy. In instances where the development proponent is likely to be eligible for Infrastructure Credits, the development proponent will need to enter into an Infrastructure Agreement confirming the precise extent of any credit and the method to be used for redeeming such credits.

Land transfers must be in fee simple and at no cost to the Council, unless otherwise agreed between the parties to the required Infrastructure Agreement.

5.6 Infrastructure Credits

Infrastructure Credits are applicable where the Council:

(a) agrees to the construction of Trunk Infrastructure by the development proponent;

(b) determines that an allowance will be made for the development proponent to offset the costs of the Trunk Infrastructure against the Infrastructure Contributions payable; and

(c) accept or specifically require the transfer of land for Open Space.

These offsets are referred to in this policy as Infrastructure Credits.

Infrastructure Credits are to be expressed in Equivalent Demand Units for each network and not in monetary terms.

Infrastructure Credits do not include offsets to Infrastructure Contributions for existing entitlements on the land, or any previous payments made under this or a former charging regime. Those items are covered in Section 6.3 of this policy.

5.6.1 Credits Calculation

Infrastructure Credits are calculated by:-

1. Determining the cost of the works or dedications (net of GST) to be constructed or dedicated by reference to the Plans for Trunk Infrastructure and the cost schedule for each Item of Trunk Infrastructure comprising the works (\( V \)), including any land contained therein;

2. Escalating the cost of the works to current day value using the same method as outlined in Section 6.4 of this policy;

3. Determining the service catchment for the Infrastructure Network Component under which the asset is classified and establishing the Infrastructure Contribution Rate for that Infrastructure Network; and

4. Dividing the escalated cost of the works determined from (1) and (2) above by the Infrastructure Contribution Rate for the applicable Component of the Infrastructure Network escalated to current day value (for this calculation, the Infrastructure Contribution Rate is the rate prescribed for the specific service catchment of the Infrastructure Network in which the Item of Trunk Infrastructure is located).

Infrastructure Credits = \( \frac{V \text{ escalated to current day value}}{\text{Infrastructure Contribution Rate for the Infrastructure Network Service Catchment in which the asset belongs escalated to current day value}} \).
Credits ‘accrue’ to the development proponent either:

(i) following final inspection and acceptance by the Council of the works “On Maintenance”; or

(ii) following the lodgement with Council of a security to cover the satisfactory completion of the works in accordance with Section 5.7 of this policy.

5.6.2 Deduction of Credits

The Infrastructure Credit for constructed infrastructure, expressed as Equivalent Demand Units, will be deducted from the total demand calculated for each of the applicable networks pursuant to this and the other Development Contributions Policies. The Infrastructure Credit will only be applicable to that development and be both determined as part of the approval process and confirmed in the required Infrastructure Agreement.

The relevant Infrastructure Contributions payable will be deducted progressively from the Infrastructure Credit as they become due for each stage until the credit is reduced to zero. Once the Infrastructure Credit is reduced to zero, the development proponent must pay Infrastructure Contributions for any remaining balance of the development demand in accordance with this policy.

Where an Infrastructure Credit is allowed, it will be determined and applied to the infrastructure network component to which the credited component belongs (no cross-subsidisation of networks and network components will be permitted).

For the purpose of clarity, development proponents are advised that higher level Infrastructure Contributions (i.e. River Level for Stormwater, Regional Infrastructure for Water and Sewerage, Regional Parks and District Sports Facilities) must, unless otherwise permitted by Council, take the form of a monetary contribution and not be offset against a Credit obtained solely for the provision of lower level Infrastructure.

5.6.3 Excess Credits

The Trunk Infrastructure constructed or provided by the development proponent may need to be designed to service areas other than, and additional to, the site of the development application. In such cases, the calculated amount of Infrastructure Credits may exceed the level of the Infrastructure Contributions otherwise anticipated for the development.

Unless otherwise permitted by Council, such excess Infrastructure Credits will not be transferable:

(a) to other Trunk Infrastructure Networks;

(b) to a different development;

BUT

(c) may be transferred between different stages of an approved staged development of the land; and

(d) may be applied to a subsequent intensification of use or higher density development at the site.

Under no circumstances will Infrastructure Credits be cash redeemable upon demand.

5.6.4 Refunding Excess Credits

In some cases, Council may allow the refunding of an excess credit from contributions levied against future users of the constructed/dedicated infrastructure. However, arrangements for these refunds will need to be specifically addressed in an Infrastructure Agreement, and be stated as either:

(1) refunds from Infrastructure Contributions made for future development on identified properties; or

(2) refunds from Infrastructure Contributions made for future development collected in a specific service catchment and expressed as a percentage of Contributions;

The Infrastructure Agreement would ordinarily contain a specified time for refunding excess credits from contributions levied on future users of the constructed/dedicated infrastructure. Unless otherwise stated in the agreement, that the time would usually be the later of the following:

(1) as the contributions are collected from future users; or

(2) when the item of Trunk Infrastructure subject of the Infrastructure Agreement was scheduled for construction in the Council’s Capital Works Program.

The refunds will be generally limited to the monetary equivalent of the excess Infrastructure Credits accrued by the development proponent for the provision of the Trunk Infrastructure at the time the excess Credits are...
accrued, but indexed to values current at the time the refund is issued by applying the Consumer Price Index (All Groups) for the City of Brisbane as published by the Australian Bureau of Statistics.

5.7 Lodgement of Securities

Where security is required to ensure the due and punctual performance of obligations or payment of a monetary contribution, the security is to be provided at no cost to Council and is to comply with Council’s policy on Securities. Under that policy, Council is prepared to accept security provided by financial institutions which are corporations authorised under the Banking Act 1959 as well as building societies and credit unions regulated by the Australian Prudential Regulation Authority (APRA) in terms of the Banking Act 1959. (A list of those institutions is displayed on APRA’s website www.apra.gov.au under the List of Authorised Deposit-Taking Institutions.)

The security will be released by Council when the obligation in respect of which the security has been given is satisfied or is no longer required by the Council. Further, the Council may, in its absolute discretion, when requested, release part of a security to the extent that it is no longer reasonably required.
6 Calculation of Infrastructure Contributions

Infrastructure Contributions are determined in accordance with the Calculation Formula in Section 6.1 below and the data obtained from Planning Scheme Policies 22-27;

6.1 Calculation Formula

The amount of each required Infrastructure Contribution is determined using the following equation:-

\[
\text{Infrastructure Contribution} = (A - B - C) \times D \times E \quad \text{where} \quad A = (P \times F)
\]

This equation considers and utilises a number of logical assessment steps relating to the existing development site and the proposed use including:-

1. The size/scale of the proposal – Demand Parameter (P);
2. The Demand Assumption (Demand Factor) relevant to the type of development (F) as listed in the demand factor tables in PSPs 22-27, Schedules A for each network;
3. Total Demand of Proposal expressed in Demand Units (A);
4. Any existing demand for the site (B) expressed in Demand Units; and
5. Any Infrastructure Credits (C) expressed in Demand Units.

The net demand is determined by deducting an allowance for any existing lawfully established uses on the land (B) and any Infrastructure Credits applying to the development site (C) from the total demand determined for the development (A). The actual amount of any required infrastructure charge is then determined by applying the following to the net demand:-

- The appropriate Infrastructure Contribution Rate (D) for the Network, Network Component Level, Service Catchment and Landuse as listed in the Infrastructure Contribution Rates tables for each network Planning Scheme Policies PSP22 - 27; and
- The current Escalation Factor (E) calculated in accordance with Section 6.4 of this Planning Scheme Policy.

</tr>
</tbody>
</table>
6.2 **Determination of Total Demand of Proposal (A)**

In accordance with Section 4 of this policy.

6.3 **Determination of Existing Demand (B)**

Infrastructure Contributions are calculated by using the existing demand of on-site activities, any Infrastructure Credits applicable to the development site and the total demand to determine the net demand generated by the proposed development.

Where an existing building or work is proposed to be extended, or a new building or work is proposed to be undertaken on land occupied by an existing lawful use, Infrastructure Contributions will only apply to the proposed extension of the existing building or existing work or to the new building or work and only to the extent that there is an increase in demand.

Existing demand for each Infrastructure Network and its components in this context is determined using one of the following with (1) taking precedence over (2) and (3), and (2) taking precedence over (3):

1. any existing demand or excess credits recorded within Council's Infrastructure Charges/Contributions Register for all applications received by Council after the adoption of PSPs 21-27;

   or

2. where Infrastructure Contributions have previously been made to the Council in respect of the land, the demand on which those Infrastructure Contributions were based;

   or

3. the equivalent demand of each lawful use undertaken on the land prior to the application being made, expressed in demand units and calculated as follows:

   (a) where the mechanism for the determination of contributions is based on site area alone – the demand for the minimum equivalent site area, which would be required under the current provisions of Council's Planning Scheme for the existing lawful use on the land, if it was to be established at the time that this application was made;

   (b) for vacant residential zoned land not addressed in (a) - the demand allowed for a single detached house. However, there will be no demand allowance for Water or Sewerage Infrastructure if the lot has access but is not connected to those Infrastructure Networks and is not subject to a vacant water supply or sewerage charge; and

   (c) where an existing building or work is proposed to be changed - the demand for that part of the existing use proposed to be changed.
6.4 Escalation

The Infrastructure Contribution Rates applicable for each service catchment and each Infrastructure Network at 30 June 2006 are set out in PSPs 22-27 for each Infrastructure Network.

To enable contributions to reflect the fluctuations in the costs of construction and land acquisition for each Infrastructure Network, the Infrastructure Contribution Rates will be subject to adjustment through escalation. Unless otherwise prescribed in an infrastructure agreement or a condition of development approval, the amount of any contribution payable will be at the rate and escalation applicable, pursuant to the Planning Scheme Policies PSP22-27, at the date that payment is made.

The infrastructure contribution rates will be adjusted at quarterly intervals. Escalation of the works component of the charge will be in accordance with the "Building Price Index" for Brisbane listed in the most recent edition of Rawlinson’s "Australian Construction Handbook". Escalation of the land acquisition component of the charge will be in accordance with the Council's adopted "Land Value Index".

Land Value Index

The "Land Value Index" for the Shire is a measure of the fluctuations in the market value of vacant residential land over time and is compiled on behalf of Council by a Certified Practicing Valuer, or some other entity having equivalent qualifications, using the following industry accepted methodology:-

(a) A review of land types is undertaken;
(b) Suitable land types are identified and selected for indexation calculation;
(c) Selected data is retrieved from "RP Data" (The Real Estate Institute of Queensland's database);
(d) The selected data is "cleansed" for incorrect entries and "outliers";
(e) The "cleansed" data is loaded onto spreadsheets for analysis;
(f) The "cleansed" data is analysed to produce yearly averages; and
(g) Index increases or decreases are calculated using the data averages.

The Land Component of all Networks is escalated at the Shire Average increase in the “Land Value Index” for the Shire.

Water Supply & Sewerage

There is no Land Acquisition component cost factored into the Water Supply and Sewerage network costs.

Stormwater

The Land Acquisition component across all future Stormwater Trunk Infrastructure is deemed to be 24% and the works component deemed to be 76%.

Transport

Roads: The Land Acquisition component across all future Trunk Roads Infrastructure is deemed to be 11% and the works component deemed to be 89% of the charge payable.

Bikeways: There is no Land Acquisition component cost factored into the Bikeways network costs.

Open Space

The land acquisition component and the works component differ per Service Catchment generally as shown in the Table 6.4A, and will be applied accordingly accordingly.

6.5 Administrative Component
Council is entitled to recover costs associated with the collection, expenditure and administration of funds collected pursuant to PSPs 21-27 (such costs fall within the scope of the term “establishment cost”). A separate contribution for the administration of this infrastructure contributions regime will therefore be imposed on all development to which the PSPs apply.

The extent of contributions to cover administration costs is calculated in the following manner:-

\[
\text{Administrative Contribution} = (A - B) \times D \times E \times \%\text{Admin}
\]

Refer to Table 6.1A for definitions of A, B, D and E.

For the purposes of this provision, the \%\text{Admin} has been set at 2% plus GST.

6.6 Aggregating Contributions
For each development proposal to which this infrastructure contributions regime applies, there will be separate contributions for the different Network Component Levels, as well as the “Administrative component”. These amounts are to be aggregated to determine the overall contribution payable for any particular development proposal.

The Network Component Levels are as follows:-

<table>

</tr>
</tbody>
</table>

6.7 Capping Methodology
A capping regime applies to Infrastructure Contributions for the net demand of new “residential development”. For payments made prior to 1 July 2008, the aggregate amount payable for the base level contribution after credits have been distributed is:-

(a) $25,000 for each additional freehold lot created pursuant to a development approval for reconfiguring a lot (excluding any lot which is required to be transferred to a public sector entity for community purposes); and

(b) $20,000 for each new dwelling unit or community title lot created pursuant to a development approval for either a material change of use or reconfiguring a lot.

The aggregate amount payable on or after 1 July 2008 is the not to exceed the pre-July 2008 capped limited escalated by the greater of the following as they are released:-

(a) the quarterly movements in the “Building Price Index” for Brisbane as listed in the most recent edition of Rawlinsons “Australian Construction Handbook”; and

(b) the bi-annual movements in the “Land Value Index” for the Shire.

The adjusted amount is not to exceed the aggregate of the uncapped contributions which would otherwise be payable.
6.7.1 Exclusions from Capping Program
The capping of trunk infrastructure contributions does not apply to:-

(1) any development which is not “residential development”;
(2) payments made after 30 June 2011;
(3) additional trunk infrastructure contributions ATIC imposed on unanticipated development;
(4) the dedication of land and/or the completion of works in lieu of making a cash payment for the trunk infrastructure;
(5) instances where alternative arrangements have been made through an infrastructure agreement;
(6) non-trunk infrastructure; or
(7) trunk infrastructure for which Council has no maintenance responsibilities.

6.7.2 Allocation of Infrastructure Entitlement for Reduced Contributions
Despite the fact that the effect of the capping of contribution rates may result in a lesser amount being paid to Council during the transition period, the development proponent is to be allocated the full trunk infrastructure entitlement in demand units on payment in full of the reduced contribution applicable to the development.

6.7.3 Allocation of Reduced Contributions to Infrastructure Networks
Payments received under Council’s trunk infrastructure charging regime are to be distributed across all of the trunk infrastructure networks contributing to the calculation of the payment due. In those instances where a reduced contribution is received, the distribution across the applicable networks is to be in direct proportion to the amount that the contribution for each network contributed to the uncapped charge which would otherwise have applied to the development.

6.7.4 Dealing with Infrastructure Credits under the Capping Regime
Unless otherwise stipulated in an infrastructure agreement, an infrastructure credit accrued by whatever means in relation to a specific trunk infrastructure network is to be:-

(1) applied as a credit against any infrastructure contributions payable for that same network, but within subsequent stages or later intensification of the same development; or

(2) in those instances where (1) can not be applied or infrastructure credits still remain even after allocation to subsequent stages, refunded to the development proponent or such other entity nominated for that purpose in a valid deed of assignment.

Where applied to subsequent stages of the development, the infrastructure credit, expressed in demand units, is to be subtracted from the units of net demand associated with the infrastructure contribution which would otherwise apply for those subsequent stages before the capping methodology is applied.

In those instances where infrastructure credits are refunded, the following process is to be applied despite the fact that the effect of the capping of contributions results in a lesser amount being paid to Council:-

(a) establish the full monetary value of the excess infrastructure credits at the time that they were accrued; i.e. prior to the capping being applied; and

(b) apply an indexing factor equivalent to the movements in the Consumer Price Index (All Groups) for Brisbane between the time that the credits are accrued and the time that they are paid out.

The above methodology is to be used for dealing with the refunding of infrastructure credits during the transition period of 1 July 2008 to 30 June 2011 despite what would otherwise apply under Section 5.6.
7 Financial Management of Infrastructure Contributions

7.1 Trunk Infrastructure Expenditure
The Plans for Trunk Infrastructure and the estimated Establishment Costs for Trunk Infrastructure shown therein form the basis of the Infrastructure Contributions being levied.

For purposes of transparency, monetary Infrastructure Contributions collected by Council will be spent on the network for which they were collected.

The imposition of a condition requiring an Infrastructure Contribution does not automatically entitle a development proponent to the immediate construction of any Trunk Infrastructure as may be necessary to service the development.

The Plans for Trunk Infrastructure demonstrate the intention of infrastructure provision by Council. The Plans for Trunk Infrastructure and the estimated establishment costs for Trunk Infrastructure contained therein are accessible as part of the Development Contributions Policies PSP 22-27.

The Plans for Trunk Infrastructure do not represent the Council’s Capital Work Programs. They do, however, form a direct input into the determination of the Capital Works Programs.

For the purpose of clarity, the Plans for Trunk Infrastructure are not meant in any way to place a rigid obligation on Council as to the amount and timing of the construction of Trunk Infrastructure.

7.2 Register of Infrastructure Contributions
Council will maintain a Register of Infrastructure Contributions in respect of each parcel of land for which Infrastructure Contributions have been paid, a contribution has been imposed or an Infrastructure Agreement addressing the issue of Infrastructure Contributions has been entered into. The Register will contain a record of the contributions applicable in respect of each Infrastructure Network and include:-

(a) the real property description of the land to which the contribution applies;
(b) the schedule under which the contribution was imposed;
(c) the Infrastructure Networks and Network Components for which the contribution was imposed;
(d) the amount of the contribution levied and whether that amount was a reduced contribution under Section 6.7 of this policy;
(e) the amount of the contribution unpaid;
(f) the number of units of demand charged for;
(g) the reference number of the development approval requiring the payment of an Infrastructure Contribution and the day the approval will lapse if not acted upon;
(h) if infrastructure was to be provided instead of paying the contribution – details of any infrastructure still to be provided; and
(i) details of any accrual, offset and reduction of Infrastructure Credit.

The Infrastructure Contributions Register will be made available for inspection at the Council’s Customer Service Centre.
Schedule A: Definitions

As indicated in Chapter 1 Part 2 of this Planning Scheme, Definitions for critical terms having general application through this Scheme are contained in Chapter 7 Parts 2-4.

Terms having specific application to Planning Scheme Policies PSP21-27 have the meanings indicated below. Terms which are already defined in Schedule 10 of the Integrated Planning Act 1997 have the meaning as stated therein.

Assumed Demand – The demand for a development proposal derived from the Planning Assumptions.

Capital Works Program - Means the infrastructure provider’s schedule of works outlined over a period of time, generally coinciding with the budget cycle, which plans the implementation of Trunk and Non-trunk Infrastructure for the Local Government.

Census Collection District (CCD) - The Census Collection District (CCD) is the smallest geographic area defined in the Australian Standard Geographical Classification (ASGC). It has been designed for use in the Census of Population and Housing as the smallest unit for collection, processing and output of data (except for some Work Destination Zones – see Destination Zones).

Constrained Open Space – means land which is:
(a) below the flood level resulting from the run-off from a one in twenty year storm (for the fully developed catchment) calculated in a manner as agreed with Council’s engineer assuming a naturally shaped and forested watercourse or gully;
(b) contains a stormwater detention/retention basin and associated works and zone other than Residential “A” or “B”;
(c) is required to be provided to attenuate transportation noise under Council’s policies,
(d) is a proposed street;
(e) is required for stormwater drainage reserve, and
(f) is within an easement for stormwater drainage purposes, power lines or any other purpose, unless in Council’s opinion the area or part of the area covered by the easement is suitable for use as public garden or recreation space.

Constructed Wetland (Wetland) - A shallow lake or pond, characterised by extensive areas of emergent aquatic plants/macrophytes, designed to support a diverse range of micro-organisms and biota associated with the breakdown of organic material and the uptake of nutrients.

Credit (also Infrastructure Credit) - Means an amount (measured in demand units) credited by the Council to a development proponent which offsets capital expenditure by the development proponent on Development Trunk Infrastructure against Infrastructure Contributions payable by the development proponent in respect of a development.

Demand - The assumed planning or design load (or level of use) placed on an Infrastructure Item or Network by development (for the determination of infrastructure contributions, Demand is typically expressed in demand units).

Demand Unit – Standard units of demand on a network generated by or likely to be generated by a development. Examples for demand units used in the Planning Scheme Policies are:
- Water supply: Equivalent Person Water Supply (EPW);
- Sewerage: Equivalent Person Sewerage (EPS);
- Stormwater Quantity: Equivalent Contributing Area Quantity (ECAQTY) - Runoff Coefficient per Zone x Catchment Area;
- Stormwater Quality : Equivalent Contributing Area Quality (ECAQUAL) - Annual Pollutant Export Rate per Zone x Catchment Area;
- Trunk Roads Infrastructure: Residential and Non-Residential Demand Units (ResDU and NonResDU);
- Open Space Trunk Infrastructure: Equivalent Tenement (ET); and
- Bikeways Trunk Infrastructure: Cycle Trip End (CTE).

Detention Basin - A pond or basin designed to temporarily detain storm or flood waters, in order to attenuate peak flows to acceptable levels downstream within a constructed major drainage system or stream.
Developable Area – the area of a parcel of land minus the area subject to Q100 flooding, Steep Slope (>25% slope), Lake Buffer Zone and ‘Of concern’ and ‘Endangered’ VMA areas.

Development Proponent – the entity proposing to undertake a Development.

Development Proposal – A proposal which comprises any or all of the elements constituting Development as defined in the Integrated Planning Act 1997.

Drainage Corridor Easement (Corridor - Easement) - The area of land identified by a registered easement, specifically required for the lawful discharge of drainage from upstream urban catchments but where ownership of the land is not required to be vested in Council. The easement may contain such infrastructure works or revegetated buffers necessary to meet the desired outcomes.

Drainage Corridor Reserve (Corridor - Reserve) - The area of land acquired or transferred to Council, identified within the applicable planning as being specifically required for the lawful discharge of drainage from upstream urban catchments where ownership of the land and responsibility for maintenance of revegetated buffers and maintenance and operation of any drainage system lies with Council.

Emblishable Area – the area of a Park which will be embellished and maintained for recreational use.

Equivalent Persons (EP) - A unit of demand for different uses or services. An EP is equivalent to the service demand from an occupant of an average, occupied detached house. Demand from multi-unit or non-residential uses may also be expressed in EPs, based upon statistical data on average occupancy or other relevant data.

Equivalent Tenement (ET) - A unit of demand for different uses or services. An ET is equivalent to the service demand from an average, occupied detached house.

Existing Demand - Existing Demand is the network demand a development proponent has already paid for in the past or is entitled to by way of existing use rights on the land subject to the development proposal (for example, a development proposal for a reconfiguration of the lot is received over a land parcel on which a residential dwelling already exists and the property is already connected to water supply and sewerage - the existing demand on the property is the demand for a single detached house).

Existing Development - For the determination of Infrastructure Contributions, any approved development for which a contribution towards infrastructure has already been made or for which no opportunity to obtain a contribution is anticipated, within the planning horizon set out in the Plans for Trunk Infrastructure.

External Catchment – Concept used to allow allocation of some demand on a Trunk Infrastructure Network to users located in areas external to the Service Catchments for those networks.

Gross Pollutant Trap (GPT) - A structure designed to collect gross pollutants such as litter, debris and coarse sediments. The collection area is usually concrete-lined to allow for rubbish removal and a trash rack is normally located at the downstream end of the trap.

Infrastructure Contribution Rates – the contribution rate applicable to a unit of demand in a service catchment and for an Infrastructure Network Component.

Infrastructure Item (also Item of Trunk Infrastructure) - Any agglomeration of works or property which is represented as a single entity for the purposes of calculating Infrastructure Contributions.

Infrastructure Network - A number of Infrastructure Items combined for a single purpose or which, by their nature, logically combine to form a network (A network comprises the primary infrastructure elements of the Plans for Trunk Infrastructure for which Council is empowered to impose infrastructure contributions e.g.

- Water Supply Trunk Infrastructure;
- Sewerage Trunk Infrastructure;
- Stormwater Quality and Quantity Trunk Infrastructure;
- Council Trunk Roads Infrastructure;
- Public Parks and Local Community Facilities Trunk Infrastructure; and
- Bikeways Trunk Infrastructure).

Infrastructure Network Component – an element or section of Infrastructure within an Infrastructure Network (for example, the Water Supply Network is further broken down into Regional and Local Components).

Life Cycle Cost - for a network of development infrastructure items, is the amount of the establishment cost of the network plus the amount representing the present value of operating, renewal and maintenance costs of the network.
Major Riparian Corridor Management Area (RMCA - Major) - The area of land identified for establishment and/or protection of riparian vegetation generally located major tributaries, creeks and rivers systems conveying permanent or semi-permanent flow.

Minor Riparian Corridor Management Area (RMCA - Minor) - The area of land identified for establishment and/or protection of riparian vegetation generally located minor tributaries or flow paths ephemeral in nature and lacking permanent or semi-permanent flow and some parts of the major waterway system where development constraints exist.

Open Channel Work - Excavated or formed channel to collect and convey the design flood flow from an upstream catchment to discharge to a watercourse, wetland or detention basin. Characteristics include regular profile, full or partial lining of the channel invert and batters with concrete, rock or vegetation and downstream erosion protection works.

Pipe Drainage System (Pipe drainage) - A system of pipes, pits or chambers and inlets to collect and convey design flows from urban allotments, roadways to discharge to a watercourse, wetland or detention basin. Where the system traverses private property the installed works are protected by a registered easement in favour of Council.

Planning Horizon
- Planning Horizon – the period from 2006 – 2026.
- Water Supply and Sewerage Planning Horizon – the period to full development of the Shire assuming densities consistent with the Planning Scheme and the Dakabin, Mango Hill and Griffin Structure Plans.
- Stormwater Planning Horizon – the period to full development of the Shire assuming densities consistent with the Planning Scheme and the Dakabin, Mango Hill and Griffin Structure Plans.
- Parks Planning Horizon – the period from 2006-2026.
- Transport Planning Horizon – the period from 2006-2026.

Planning Assumptions - The statements within the Priority Infrastructure Plan that outline the basis for planning, designing and funding the networks of infrastructure that are to service development undertaken in the community.

Rehabilitation - Improving the geomorphologic and ecological conditions of a waterway to those more closely resembling natural conditions. This includes channel enhancement to minimise erosion and siltation, stream bank protection and improving the vegetation cover of the waterway channel and corridor.

Revegetation - The re-establishment of plants on an area of channel or waterway corridor that has been depleted or devoid of vegetation in order to provide protection against erosive agents and to improve the nutrient and sediment interception and filtration capacity as well as to provide improved fauna habitat. It is an integral part of erosion control and prevention. Preferred species for revegetation are those endemic to the area and those specific to creek and riverine corridors.

Road Crossing Upgrade (Crossing Upgrade) - Measures to improve the hydraulic conveyance or efficiency of a waterway or constructed channel at a road crossing. These may include the installation of additional pipes or box culverts and new or increased bridge waterway openings or spans. It also includes associated headwall, wingwalls, concrete aprons and erosion protection and may also include limited channel re-alignment upstream and downstream of the crossing. Credit will only be provided where it addresses an existing deficiency (responsibility of existing residents) or addresses an agreed “regional” deficiency (i.e. serving the future runoff intensity from the wider region and other subdivisions or future developments).

Runoff Coefficient - The ratio of the peak rate of water runoff per unit of catchment area to the average rainfall intensity during the critical rainfall event for a particular catchment (refer to Queensland Urban Drainage Manual).

Sedimentation Basin - A basin or structure designed for the temporary detention of stormwater flows to provide time for the settling of suspended sediments and other heavy pollutants prior to discharge into a watercourse, lake or other water storage. It is designed to promote low-velocity and low-turbulence flows to facilitate the settling process. It may be used as a pre-treatment upstream of other stormwater quality treatment measures such as wetlands.

Service Catchment – The area containing the demand units being serviced by a nominated infrastructure item or collection of nominated infrastructure items.
Spare Capacity - The additional service function or “capacity” of a network that is built into the initial construction so that other or additional calculated demands can be incorporated into the system without the need for constant incremental augmentation.

Statistical Local Area (SLA) - The SLA is a general purpose spatial unit. It is the base spatial unit used to collect and disseminate statistics. An SLA consists of one or more whole Census Districts.

Stream Bank Protection or Stabilisation (Bank Stabilisation) - Works implemented to protect or reinforce existing stream banks from erosion. Measures may include the installation of loose or anchored materials such as large boulders, geotextiles, gabions, mattresses, concrete or precast concrete units. It may also include the re-shaping of batters and the installation of soil stabilising plant species.

Swale - A shallow open drainage flow path, constructed to collect, convey and treat stormwater flows. Characteristics include batters designed for ease of maintenance, vegetation to retard flow velocities and retain sediment and nutrient prior to discharge to a watercourse, wetland or detention basin.

Trash Rack - A series of metal bars located across a stormwater channel or pipe to trap litter and debris. The bars may be vertical or horizontal depending upon hydraulic, cleaning and/or environmental considerations (eg fish passage). Vertical bars are normally preferred to facilitate cleaning.

Trunk Road Infrastructure – the roads identified on the Priority Infrastructure Plan maps.

Unanticipated Development – Development which is inconsistent with the Planning assumptions in the Plans for Trunk Infrastructure (PFTI) in respect of location, type, scale, size, intensity or timing, or otherwise inconsistent with the stated outcomes of the Planning Scheme.

Urban Footprint – refers to the Urban Footprint as shown in Map2 in the SEQ Regional Plan.

Weir Type Sediment and Trash Trap (Sediment Trap) - A small open structure designed to collect sediment and trash specifically designed in accordance the provisions of the PRSC Design Manual generally located at the end of pipe systems serving catchments of between two (2) hectares and 5 hectares. The device consists of a concrete apron of sediment collection area with weir boards mounted transverse to the stormwater flow to retain and slowly release runoff from minor storm events thus enabling the collection of trash, or litter and coarse sediment.

**Review Triggers**

This policy is reviewed internally for applicability, continuing effect and consistency with related documents and other legislative provisions when any of the following occurs:

1. The related documents are amended;
2. The related documents are replaced by new documents;
3. Amendments which affect the allowable scope and effect of a policy of this nature are made to the head of power; and
4. Other circumstances as determined from time to time by a resolution of Council.

**Responsibility**

This policy is to be:

1. implemented by the Manager Development Services; and
2. reviewed and amended in accordance with the "Review Triggers" by the Manager Strategic Direction in consultation with the Manager Development Services.

**Version Control**

**CEO Approval Date**
