

The University Precinct

The Roadside Reststop

Wyllie Park

Heritage listed rest area on the old Bruce Highway. Identified as a space to be used for rest and a picnic area for the public.

The Oval
The oval is re-installed to reflect the former cricket oval that was a significant part of The Mill landscape. The new oval is domed with gentle grass swales at the edge of the field. It is ringed on all sides with vegetation and a shared pathway. The oval offers an opportunity as an event space and could host music concerts, Christmas carols and informal sporting carnivals.

Green Infrastructure

Wildlife crossing infrastructure including roadside (wildlife exclusion) fencing, underpasses and rope bridges, allowing better movement of wildlife, and preventing wildlife-vehicle collisions.

The Park

Green Edge

The green edge is the transition space between the parkland and ecological (conservation) zones. This area is seen as a place where low impact park use could occur with minimal impact on the fauna and flora within the conservation zone.

The Creek

The creek provides the opportunity for involvement with nature and water. It is part of each of the park spaces within The Oval precinct of the regional park and changes character as it meanders through the park with opportunities to cross the creek. Paths along the creek are an important part of the user experience.
