SC7.0.1—Car parking

Note - Car parking requirements in this schedule only apply to development where the schedule is specifically referenced in the examples that satisfy aspects of the performance outcomes column of a relevant code.

Note - Where specified, car parking rates are calculated on the area provided for the proposed use. Where the calculated number of parking spaces required is not a whole number it must be rounded up to the next whole parking space.

For example, if an activity is providing 125m² of GFA and the applicable parking rate is 10 parking spaces per 100m² of GFA then 13 parking spaces would be required. To calculate this: the GFA is divided by 100 (area rate) and multiplied by 10 (parking spaces required) then the answer is rounded up to the next whole parking space (125/100 x 10 = 12.5). Therefore 13 parking spaces are required.

Note - The below rates exclude car parking spaces for people with a disability required by Disability Discrimination Act 1992 or the relevant disability discrimination legislation and standards.
