**Pine Rivers Shire Council** 

Planning Scheme Policy

PSP27 Development Contributions for Trunk Infrastructure – Bikeways

# Planning Scheme Policy for Pine Rivers Shire

# PSP27 Development Contributions for Trunk Infrastructure – Bikeways

# ADOPTION

Pine Rivers Shire Council adopted this planning scheme policy on 19 June 2006.

# COMMENCEMENT

This planning scheme policy took effect from 15 December 2006.

# Amendment 2/2008

ADOPTION OF AMENDMENT

Moreton Bay Regional Council adopted this amendment to the planning scheme policy on 19 August 2008.

# COMMENCEMENT OF AMENDMENT

This amendment to the planning scheme policy took effect from 1 September 2008.

I, John Rauber, Chief Executive Officer, of the Moreton Bay Regional Council, hereby certify that this document is a true copy of the original.

# PSP 27 – DEVELOPMENT CONTRIBUTIONS FOR TRUNK INFRASTRUCTURE – BIKEWAYS

#### Head of Power

This document is a Planning Scheme Policy for the purposes of the *Integrated Planning Act 1997* (the Act) and is made in compliance with the process prescribed in Schedule 3 of the Act.

#### Objective

The objective of this policy is to establish a mechanism for funding of Bikeways Trunk Infrastructure (existing and proposed), commensurate with the adverse impacts of development on that infrastructure and which ensures a reasonable and equitable distribution of the costs of Bikeways infrastructure works between Council and developers of land in Council's Local Government area.

#### **Definitions / Application**

#### Application

This policy applies to all applications for development which have been made assessable by Council's Planning Scheme and which will utilise any part of the Bikeways Trunk Infrastructure Network. For the purposes of this policy, the extent of the Bikeways Trunk Infrastructure Network within the Shire is shown in Schedule D.

The policy outlines the basis of Council's Infrastructure Contributions Regime for the Bikeways Network in Pine Rivers Shire. It is to be read in conjunction with Planning Scheme Policy PSP21 Development Contributions for Trunk Infrastructure – Administration (PSP21).

Payment of any monetary contribution under this policy will in no way relieve the development proponent from any requirement under a condition of development approval to undertake infrastructure works not on a Trunk Bikeway or necessary to access a Trunk Bikeway.

Nothing contained in this policy precludes Council and the development proponent from entering into an infrastructure agreement in regard to the matters dealt with by this policy.

#### Definitions

The definitions of applicable terms are contained in PSP21 Development Contributions for Trunk Infrastructure – Administration and the 'study report' identified in Section 2 "Background Information". Where a term used in this policy is not defined in PSP21 or the 'study report', that term shall, unless the context indicates or requires otherwise, have the meaning assigned to it in Council's Planning Scheme or in the *Integrated Planning Act 1997*.

#### **Policy Statement**

#### 1 Scope

This policy sets out the basis for the determination of Development Contributions for Bikeways Trunk Infrastructure which Council will impose as conditions of development approval. The provisions of this policy shall apply to applications for development within the Shire and which, in the opinion of Council, may impose a load on its Bikeways Trunk Infrastructure either immediately or at some time in the future.

This policy:

- is to be read in conjunction with Planning Scheme Policy PSP21 Development Contributions for Trunk Infrastructure Administration;
- specifies the assumptions made in determining the rate of the contribution payable towards the cost of Bikeways Trunk Infrastructure within Council's Local Government Area;
- specifies the works which the Council determines to be Bikeways Trunk Infrastructure;
- establishes the estimated cost of construction and any required augmentation of the Bikeways Network in respect of which contributions are to be made; and
- lists the applicable Demand Factors and Schedules of Infrastructure Contribution Rates.

#### Background Information

The methodology used in establishing the amount of required Trunk Infrastructure Contributions under this policy is based on the report by Arup, "Priority Infrastructure Plan Transport" (the Study Report). The Study Report comprises:-

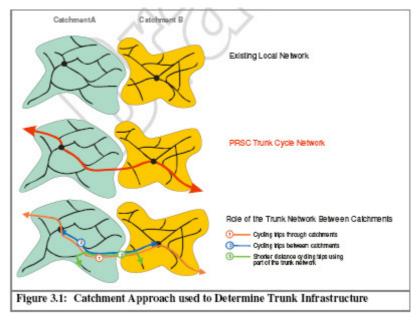

- (1) Part 1 The Infrastructure Charges Summary (June 2008);
- (2) Part 2 Main Report (June 2008);
- (3) Part 3 Detailed Maps (June 2008);
- (4) Part 4 Calculations and Supporting Data (June 2008); and
- (5) Pine Infrastructure Plan (Bikeways) (June 2008)

#### Methodology for Bikeways

# 1.1 Methodology

These fundamental principles as for the Council Trunk Road network have been applied to identify the bikeways trunk infrastructure. Figure 1 illustrates the catchment based approach which assists in the conveying the principles behind the definition of trunk bicycle infrastructure. This figure demonstrates the multi-purpose role and function of a proposed trunk route. The primary function of the trunk route is to facilitate cycling trips between the two destinations. However, the connections into the lower order cycle network also enable shorter trips to be undertaken on part of this trunk route.

### Figure 3.1 – Catchment Approach to determine Cycle Trunk Infrastructure

As part of this study, a four step process was carried out.

#### Step 1: Identification of key cycling attractors (catchments)

The following key cycling attractors are shown in Table 3.1.

## Table 3.1 – Bikeways Network Key Cycling Attractors

MAJOR DISTRICT CENTRE Mitchelton Strathpine Redcliffe City Chermside Deception Bay DISTRICT INDUSTRIAL CENTRE Brendale Narangba Lawnton MAJOR SUBURB Mango Hill Albany Creek Dayboro Kallangur Samford Mt Nebo Petrie Aspley Arana Hills Kippa-Ring Warner Mount Samson **EDUCATION (TAFE)** Grovely **EDUCATION (UNIVERSITY)** Carseldine RAIL STATIONS Oxford Park Keperra Ferny Grove Bald Hills Strathpine Bray Park Lawnton Petrie Dakabin Narangba Mitchelton

#### Step 2: Determination of cyclist desire lines

Cyclist desire lines were determined based on an assessment of the anticipated cyclist demand and relative attractiveness of each centre or catchment. The cyclist desire lines represent potential higher order cycle corridors.

#### Step 3: Identification of candidate trunk bikeways

The selection of candidate trunk bikeways was based upon an initial examination of candidate corridors and then reviewed against the following:

- extent of existing infrastructure;
- topography;
- directness;
- surrounding land use;
- natural surveillance; and
- local knowledge gathered as part of a key stakeholders workshop.

#### Step 4: Identification of trunk bikeways

The final trunk bikeways network was determined with the assistance of a strategic bikeways model. The strategic model utilises the same demographic and employment forecasts as used in Council's Trunk Road network model. The model breaks the Shire down into 532 zones. Each service catchment is described as a zone within the model and represents a discrete service catchment. The route assignment algorithms within the model take into consideration directness, infrastructure width, grade and friction.

The bikeways model is strategic in nature and as such, careful interpretation is required when reviewing the anticipated cycle volumes and route assignment. Where the model indicates that a route is expected to carry in excess of 50 cyclists per day, these links are considered to represent the higher order routes whose primary function will be to carry through traffic and provide connectivity between suburbs or catchments. In the context of IPOLA, these links would be defined as trunk infrastructure.

In most instances, the model confirmed routes identified by the key stakeholders as being of most significance. However, in some instances the model identified parallel links. In these instances, further consideration was given to the relative merits of each potential link and engineering judgment was used to select which link would be most suitable for inclusion in the final trunk bicycle network plan.

The final trunk network plan was broken down into 48 projects. The network depicted in Schedule D of this policy represents a desired higher order cycling network.

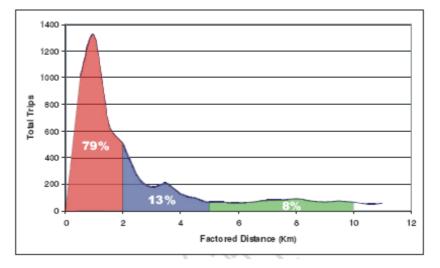

#### Step 5: Cost Apportionment to derive Infrastructure Charges

The apportionment of costs to fund the infrastructure is then based on:

- (a) Proximity of the development zone to the trunk network; and
- (b) The proportion of cyclists generated by future population using the link.

Cycling trips are generally shorter distance trips than those associated with motorised transport. Figure 2 shows the trip distribution curve for cyclists based on analysis of the Household Travel Survey (1992). For the purposes of this assessment we have ignored those cyclist trips in excess of 10km for which there are very few records.

# Figure 3.2 – Cyclist Distribution Curve

As shown in this graph, 79% of cyclist trips on any given route are expected to be generated by a zone within a 2km distance of the route, 13% within 2-5km and 8% within 5-10km. For each eligible project, the zones within the above buffer regions have been identified and the cost of the projects apportioned accordingly (i.e. all zones within 2km will fund 79% of the project).

The sum of the 2003 (existing) and 2018 (existing plus growth) cycle trip ends were then calculated for all zones within each of the buffer regions (i.e. 2km, 5km & 10km). The developer contribution relates only to the growth percentage as calculated using the following equation:

#### Growth Percentage = <u>2018 trip ends – 2003 trip ends</u> 2018 trip ends

A developer contribution is then calculated per daily cycle trip end.

Comparison of the roads model against the bikeways model suggests that cycling trip ends as a proportion of motor vehicle trip ends is 3.14%.

Whilst the roads factors have been based upon a peak hour assessment, the cycling factors have been based on a 24 hour period. The road network model indicates that the peak hour traffic volumes represent approximately 8% of the 24 hour traffic volumes. Therefore to achieve 24 hour volumes from peak hour volumes, a factor of 12.5 (100 divided by 8) has been applied, as shown in the following equation:

Cycle Factor = Roads Factor x 3.14% x 12.5

# 1.2 Service Catchments

For the purposes of determining contribution rates under this policy, the Shire has been divided into a number of discrete "service catchments". The service catchments for Bikeways are the same as those determined for the Trunk Roads Network.

The extent of each of these "service catchments" is shown on the maps in "Schedule C" of PSP25.

#### 1.3 Demand Assumptions for Bikeways Network Planning

Demand for the Bikeways Network is expressed in daily cycle trip ends.

#### Plan for Bikeways Trunk Infrastructure

#### 1.4 Bikeways Infrastructure Network Components

Bikeways Trunk Infrastructure includes all routes which are expected to carry in excess of 50 cyclists per day. These links are considered to represent the higher order routes whose primary function will be to carry through traffic and provide connectivity between suburbs or catchments.

The various elements of Bikeways Trunk Infrastructure are shown on the maps in Schedule D and specifically identified in Table 4.3A.

In regards to the timing of the provision of the bikeways, it should be noted that over half of the infrastructure is existing with some identified for upgrade.

Where identified links are yet to be provided, alternative routes are available to cyclists. As a consequence, the majority of the trunk cycle corridors can be utilized immediately and Council has greater flexibility in staging the delivery of the remainder of the trunk cycle network. It is therefore not considered imperative that Council identify which projects will be completed in which financial year. Nor is it necessary for Council to complete all of one project in the same financial year.

However, the delivery of the infrastructure can be related to maintaining Council's desired standard of service. This is a function of the anticipated cyclist volumes. As the identified trunk bikeways infrastructure provides connectivity between cycling attractors, the growth in cyclists volumes on the individual links is not heavily influenced by any single development. As a result the model suggests a relatively uniform rate of growth between 2006 and 2026.

Where a link is expected to attract an ultimate demand of:

- > 200 cyclists per day it has been classified as a short term priority (i.e. prior to 2011);

- 100 - 200 cyclists per day it has been classified as a medium term priority (2011 - 2016);

- 50 -100 cyclists per day it has been classified as a long term priority (2016 - 2026);

## 1.5 Cost Estimates

Cost estimates for new infrastructure including upgrades have been based on unit rates supplied by Council, and are represented in 2006 dollars.

A unit rate of \$50 per square metre for the construction of concrete paths has been assumed. Where a path is to be upgraded, it has been assumed that Council will extend the widths of existing facilities by doweling.

Where a route has been classified as future intent the route and type of facility proposed is yet to be determined For the purposes of identifying an indicative infrastructure cost a minimum standard 2.0m off road path has been assumed and the unit rate of \$50 per square metre applied.

For on road bike routes ustilising local streets \$300 per 100 meter segment has been allowed for to facilitate route signage.

An allowance of 30% has been made for contingencies, on-costs and Council overheads.

# 1.6 Bikeways Trunk Infrastructure Projects

In the following table, the column 'Status' shows values Y for 'Yes' (complete), C for 'Commenced' and N for 'Not Started'.

#### Schedule C: Service Catchments

The Service Catchments for Bikeways Trunk Infrastructure are the same as for Council Trunk Roads Infrastructure. Please refer Planning Scheme Policy PSP25 – Development Contributions for Trunk Infrastructure – Council Trunk Roads, Schedule C.

#### **Schedule D: Network Assets**

The Network Assets for the Bikeways Trunk Infrastructure network are contained on the mapping for the Trunk Roads Infrastructure network. Please refer Planning Scheme Policy PSP25 – Development Contributions for Trunk Infrastructure – Council Trunk Roads, Schedule C.

#### Schedule E: Desired Standards of Service

Given the primary role of trunk cycle infrastructure is to carry through traffic and provide connectivity between suburbs or catchments in a safe, efficient and effective manner, Council's desired standards of service for trunk cycle infrastructure under this policy are:

- (1) Where a route meets the criteria for classification as trunk infrastructure, the minimum standard will generally be the provision of a 2.0m off-road shared concrete footpath;
- (2) Where volumes are expected to exceed 300-400 cyclists per day by 2026, the path width should be increased to 2.5 metres or the minimum standard infrastructure (i.e. 2.0m paths) may instead be provided on both sides of a road corridor;
- (3) Where the route is adjacent to an Arterial Road, the path width should be increased to 2.5 metres or the minimum standard infrastructure (i.e. 2.0m paths) may instead be provided on both sides of a road corridor; and
- (4) Where the route is immediately adjacent to a school or an area of significant pedestrian activity, the path width should be increased to 2.5 3.5 metres. The above desired standard of service has been applied to the 48 projects identified in the final trunk network plan included in Appendix C. Each plan in Appendix C depicts a trunk bikeways project and provides the following information for Off Road Bikeways, as shown overleaf.

Note that the standard of service defined here has been applied in the planning context to identify the infrastructure widths required. This should not be confused with the design standard required for the construction of the infrastructure (e.g. horizontal alignment, sight lines etc). The latter shall be in accordance with *Planning Scheme Policy PSP 28 – Civil Infrastructure Design*.

#### **Review Triggers**

This policy is reviewed internally for applicability, continuing effect and consistency with related documents and other legislative provisions when any of the following occurs:

- (1) The related documents are amended;
- (2) The related documents are replaced by new documents;
- (3) Amendments which affect the allowable scope and effect of a policy of this nature are made to the head of power; and
- (4) Other circumstances as determined from time to time by a resolution of Council.

#### Responsibility

This policy is to be:

- (1) implemented by the Manager Development Services; and
- (2) reviewed and amended in accordance with the "Review Triggers" by the Manager Strategic Direction in consultation with the Manager Development Services.

# **ENDNOTES**

Amendment No – 2/2008		Date Adopted –Effective Date –19 August 20081 September 2008	
Planning Scheme Policy Reference		Description of Amendment	
PSP 27	To reflect updated network planning		
	• L	Update infrastructure contribution rates	
	• I	Incorporate additional material, for example, desired standards of service	
	• F	Re-wording and restructuring of the document to improve readability	
	• F	Revised demand factors
