6.2.2 Community facilities zone code

6.2.2.1 Application - Community facilities zone

This code applies to assessing development in the Community facilities zone, if:

- 1. self-assessable or assessable development where this code is an applicable code identified in the assessment criteria column of a table of assessment (Part 5);
- 2. impact assessable development (Part 5).

When using this code, reference should be made to 5.3.2 'Rules for determining the level of assessment' and, where applicable, 5.3.3 'Rules for determining the assessment criteria' located in Part 5.

For self-assessable or assessable development for this Code Part 6.2.2:

- 1. Part A of the code applies only to self-assessable development in the 6.2.2.1 'Abbey precinct';
- 2. Part B of the code applies only to assessable development in all 6.2.2.1 'Abbey precinct';
- 3. Part C of the code applies only to self-assessable development in the 6.2.2.2 'Airfield precinct';
- 4. Part D of the code applies only to assessable development in all 6.2.2.2 'Airfield precinct';
- 5. Part E of the code applies only to self-assessable development in the 6.2.2.3 'Utilities precinct';
- 6. Part F of the code applies only to assessable development in all 6.2.2.3 'Utilities precinct';
- 7. Part G of the code applies only to self-assessable development in the 6.2.2.4 'Lakeside precinct';
- 8. Part H of the code applies only to assessable development in all 6.2.2.4 'Lakeside precinct';
- 9. Part I of the code applies only to self-assessable development in the 6.2.2.5 'Special use precinct';
- 10. Part J of the code applies only to assessable development in all 6.2.2.5 'Special use precinct'.

6.2.2.2 Purpose - Community facilities zone

- The purpose of the Community facilities zone code is to provide for community related activities and facilities
 whether under public or private ownership. These may include municipal services, public utilities, government
 installations, transport and telecommunication networks and community infrastructure of an artistic, social or
 cultural nature.
- 2. The Community facilities zone includes 5 precincts; Abbey, Airfield, Utilities, Lakeside and Special use.
- 3. The purpose of the Community facilities zone code is to implement the policy direction as set out in Part 3, Strategic Framework.

6.2.2.1 Abbey precinct

6.2.2.1.1 Purpose - Abbey precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the Abbey precinct:
 - a. Development supports, and does not diminish or detract from, the unique character created by established non-rural uses and activities namely Place of worship⁽⁶⁰⁾, Educational establishment⁽²⁴⁾, tourism and agriculture.
 - b. Areas within the precinct not associated with established non-rural uses maintain their primary role for rural and agricultural purposes, with tourism activities occurring on an occasional and temporary basis.
 - c. Development continues to play a significant role providing local employment, educational and cultural functions and attracting visitors to the Region.
 - d. Development provides appropriate on-site buffers and setbacks from established on-site uses occurring within the precinct and on adjoining land to internalise any potential nuisance impact.
 - e. Development for retail and commercial activities on-site are limited to those uses having a nexus with, and are ancillary to, the tourism use occurring and be of a scale that remains subordinate to the network of centres within the Region.
 - f. Residential uses are limited in number and location to achieve a low density, scale and intensity of use to retain the existing rural character and amenity. Residential uses are occupied by people associated with the Place of worship⁽⁶⁰⁾ on the site.
 - g. Development is properly separated and buffered from surrounding sensitive land uses and rural activities, and operates in a manner that does not adversely impact on the low density, low intensity rural character or amenity of the surrounds.
 - h. Development is designed and operated to achieve a high level of amenity and maintains the safety of people and property through crime prevention through environmental design principles (CPTED).
 - i. Development is of a scale, height and bulk that provides a high level of amenity and is consistent with the character of the surrounding area.
 - j. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - i. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network:
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
 - k. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
 - I. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.

- m. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
- n. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities:
 - viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
 - ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
 - x. ensuring effective and efficient disaster management response and recovery capabilities;
 - xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- Development in the Abbey precinct includes one or more of the following:

Animal husbandry ⁽⁴⁾	 Function facility⁽²⁹⁾ 	 Place of worship⁽⁶⁰⁾
 Cemetery⁽¹²⁾ - if a maximum of 100 spaces Child care centre⁽¹³⁾ Cropping⁽¹⁹⁾ 	 Home based business⁽³⁵⁾ Intensive horticulture⁽⁴⁰⁾ Market⁽⁴⁶⁾ Multiple dwelling⁽⁴⁹⁾ - if dwellings are detached and the number of dwellings does not exceed 20 	 Rural workers' accommodation⁽⁷¹⁾ Tourist attraction⁽⁸³⁾ Tourist park⁽⁸⁴⁾

	facility ⁽²⁶⁾	•	Outdoor sport and recreation ⁽⁵⁵⁾	•	Veterinary services ⁽⁸⁷⁾
•	Food and drink outlet ⁽²⁸⁾	•	Parking station ⁽⁵⁸⁾	•	Warehouse ⁽⁸⁸⁾
		•	Port services ⁽⁶¹⁾	•	Wholesale nursery ⁽⁸⁸⁾
•	Funeral parlour ⁽³⁰⁾			•	Winery ⁽⁹⁰⁾
•	Garden centre ⁽³¹⁾				
•	Hardware and trade supplies ⁽³²⁾				

Note - A dwelling provided for a caretaker of a non-residential use in the Community facilities zone is defined as Rural workers' accommodation (71)

q. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

6.2.2.1.2 Criteria for assessment

To determine if development is self-assessable, development must comply with the self-assessable acceptable outcomes set out in Part A, Table 6.2.2.1.1. Where development does not meet a self-acceptable outcome (SAO) of the relevant criteria Part A Table 6.2.2.1.1, assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a SAO is not met, and is therefore limited to the subject matter of the SAOs that are not complied with. To remove any doubt, for those SAOs that are complied with, there is no need for assessment against the corresponding PO.

Part A —Criteria for self-assessable development - Abbey precinct

Table 6.2.2.1.1 Self-assessable development - Abbey precinct

Self-asse	Self-assessable acceptable outcomes		
	General criteria		
Building	Building height		
SAO1	Building height does not exceed the maximum height identified on Overlay map - Building heights, except for architectural features associated with religious expression on Place of worship ⁽⁶⁰⁾ and Educational establishment ⁽²⁴⁾ buildings.		
Setbacks			
SAO2	Buildings and structures, excluding Multiple dwelling (49), are setback as follows:		

	a. road frontage - 10m
	b. side boundary - 10m
	c. rear boundary - 10m
Specific I	rural uses setbacks
SAO3	The following uses, associated buildings and structures are setback from all lot boundaries as follows:
	a. Animal husbandry ⁽⁴⁾ (buildings only) - 10m
	b. Cropping ⁽¹⁹⁾ (buildings only) - 10m
	c. Intensive horticulture ⁽⁴⁰⁾ - 20m
Site cove	r (S)
SAO4	Site cover of all buildings and structures does not exceed 20%.
Resident	ial density
SAO5	Residential density does not exceed 21 dwellings on the site, including 1 Dwelling house ⁽²²⁾ and 20 Multiple dwellings ⁽⁴⁹⁾ .
Car parki	ng •
SAO6	On-site car parking is provided in accordance with Schedule 7 - Car parking.
Waste	
SAO7	Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy - Waste.
Lighting	
SAO8	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of the Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.
	Note - "Curfewed hours" are taken to be those between 10pm and 7am the following day.
Hazardou	us chemicals
SAO9	All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.1 Hazardous Chemicals Self-Assessable Thresholds complies with Schedule 9, Table 9.0.3 Hazardous Chemicals Self-Assessable Criteria.
SAO10	Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.2 Hazardous Chemicals Assessable Thresholds.
Clearing	of habitat trees where not located in the Environmental areas overlay map
SAO11	Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:
	a. Clearing of a habitat tree located within an approved development footprint;

- b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

Works criteria

Utilities

SAO12 Where available, the development is connected to:

- an existing reticulated electricity supply;
- b. telecommunications and broadband;
- c. reticulated sewerage;
- d. reticulated water:
- e. constructed and dedicated road.

SAO13 Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility.

Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.

Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development.

Access

SAO15

Any new or changes to existing site access and driveways are designed and located in accordance with:

- a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or
- b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

SAO16

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Stormwater

SAO17

Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

SAO18

Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

- a. is for urban purposes only;
- b. involves a land area greater than 2500m²;
- will result in 6 or more dwellings;
 OR

will result in an impervious area greater than 25% of the net developable area.

Site works and construction management

SAO20

Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design.

SAO21

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

SAO22

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.

SAO23

Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.

SAO24

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

Earthworks

SAO25

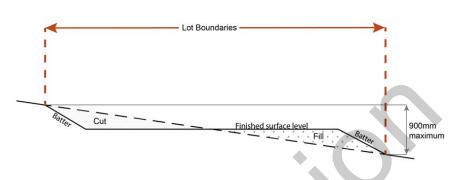

The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

SAO26

The total of all cut and fill on-site does not exceed 900mm in height.

Figure - Cut and fill

Note - This is site earthworks not building work.

SAO27

Filling or excavation does not result in:

- a reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

Note - Public sector entity is defined in the Sustainable Planning Act 2009

Fire services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or ii.

 - material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

SAO28

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005):

in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

- b. in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- c. in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls
 of those buildings;
 - ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 - iii. for outdoor sales ⁽⁵⁴⁾, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales ⁽⁵⁴⁾, outdoor processing and outdoor storage facilities; and
- d. in regard to fire hydrant accessibility and clearance requirements Part 3.5 and where applicable, Part 3.6

SAO29

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

SAO30

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

SAO31

For development that contains on-site fire hydrants external to buildings:

- a. those external hydrants can be seen from the vehicular entry point to the site; or
- b. a sign identifying the following is provided at the vehicular entry point to the site:
 - i. the overall layout of the development (to scale);
 - ii. internal road names (where used);
 - iii. all communal facilities (where provided);
 - iv. the reception area and on-site manager's office (where provided);
 - v. external hydrants and hydrant booster points;
 - vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- a. in a form;
- b. of a size;
- c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

SAO32

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

	Use specific criteria
Dwelling	house ⁽²²⁾
SAO33	The dwelling house ⁽²²⁾ is only used to accommodate members of the Confraternity.
SAO34	Where the dwelling house ⁽²²⁾ includes a secondary dwelling, the secondary dwelling: a. has a maximum GFA of 100m²; b. obtains access from the existing driveway giving access to the Dwelling house ⁽²²⁾ ; c. is setback 50m from all property boundaries; d. is located within 20m of the principal Dwelling house ⁽²²⁾ ; e. is separated from other dwellings by a minimum distance of 1.5m; f. is only used to accommodate members of the Confraternity.
Home ba	sed business (35)
SAO35	Home based business(s) ⁽³⁵⁾ are fully contained within a dwelling or on-site structure, except for a home based child care facility.
SAO36	The maximum total use area is 100m ² .
SAO37	Only 1 additional non-resident, either an employee or customer, is permitted on the site at any one time. Note - This provision does not apply to Bed and Breakfast or farmstay business.
SAO38	Service and delivery vehicles do not exceed one Small Rigid Vehicle (SRV) at any one time.
SAO39	Vehicle parking for the Home based business ⁽³⁵⁾ on-site is limited to 1 car or Small Rigid Vehicle (SRV).
SAO40	The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.
SAO41	The Home based business ⁽³⁵⁾ does not involve vehicle servicing or major repairs, including spray painting or panel beating. Note - Vehicle servicing excludes general maintenance of a vehicle such as, but not limited to, changing engine fluids, filters and parts such as batteries and plugs.
SAO42	The hours of operation do not exceed 8:00am to 6:00pm, Monday to Saturday and are not open to the public on Sunday's, Christmas Day, Good Friday and Anzac Day.
	Note - Office ⁽⁵³⁾ or administrative activities that do not generate non-residents visiting the site, such as book-keeping and computer work, may operate outside the hours of operation.
SAO43	The Home based business ⁽³⁵⁾ does not generate noise that is audible from the boundary of the lot.

	Note - Guidance on acceptable noise is provided in the standards listed in the Environmental (Noise) Policy 2008.
	Note - This provision does not apply to the use of motor vehicles.
SAO44	The Home based business ⁽³⁵⁾ does not involve an environmentally relevant activity (ERA) as defined in the <i>Environmental Protection Regulation 2008.</i>
SAO45	Only goods grown, produced or manufactured on-site are sold from the site.
SAO46	Display of goods grown, produced or manufactured on-site are contained within a dwelling or on-site structure and the display of goods is not visible from boundary of the site.
SA047	For bed and breakfast and farmstays:
	a. overnight accommodation is provided in the Dwelling house (22) of the accommodation operator.
	b. maximum 4 bedrooms are provided for a maximum of 10 guests.
	c. meals are served to paying guests only.
	d. rooms do not contain food preparation facilities.
	(49)
	dwelling ⁽⁴⁹⁾
SAO48	Multiple dwellings ⁽⁴⁹⁾ are provided in the form of detached buildings.
SAO49	The number of Multiple dwellings ⁽⁴⁹⁾ located on the site does not exceed 20.
SAO50	Multiple dwellings ⁽⁴⁹⁾ are separated by a minimum distance of 1.5m and a maximum of 10m.
SAO51	Multiple dwellings ⁽⁴⁹⁾ are setback a minimum 50m from all property boundaries.
SAO52	Multiple dwellings ⁽⁴⁹⁾ are only used to accommodate members of the Confraternity.
Rural wo	rkers' accommodation ⁽⁷¹⁾
SAO53	Rural workers' accommodation ⁽⁷¹⁾ is located in the Residential Area on Map 1 - Abbey use areas.
SAO54	No more than 1 Rural workers' accommodation ⁽⁷¹⁾ per lot.
SAO55	Rural workers' accommodation ⁽⁷¹⁾ is contained within 1 structure.
SAO56	No more than 12 rural workers are accommodated.
SAO57	Access is obtained from the existing driveway giving access to the Dwelling house ⁽²²⁾ .
Telecomi	nunications facility ⁽⁸¹⁾
that will no	te - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner to cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz
SAO58	A minimum of 45m ² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.	
Equipment shelters and associated structures are located:	
 a. directly beside the existing equipment shelter and associated structures; b. behind the main building line; c. further away from the frontage than the existing equipment shelter and associated structures; d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. 	
Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.	
The facility is enclosed by security fencing or by other means to ensure public access is prohibited.	
A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.	
Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.	
All equipment comprising the telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.	

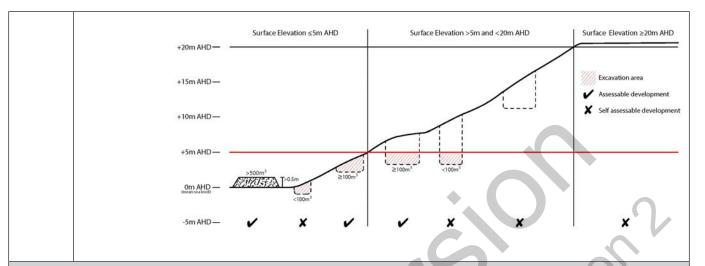

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

Development does not involve: a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD.

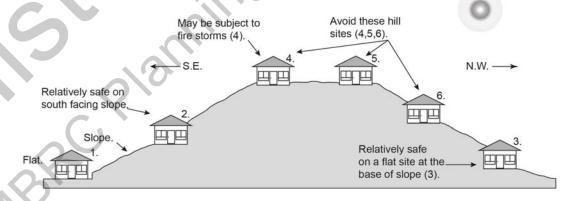

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

SAO66

- a. Building and structures are:
 - i. not located on a ridgeline
 - ii. not located on land with a slope greater than 15% (see Overlay map Landslide hazard)
- b. Dwellings are located on east to south facing slopes.

House Sites Numbered in Order of Degree of Fire Safety

(1 being the safest, 6 being the most hazardous.)
From Bushfire Prone Areas: Siting and Design of Residential
Buildings (1997), Queensland Department of Local Government
and Planning, and Queensland Fire & Rescue Service.

SAO67

Buildings and structures have contained within the site:

 a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;

- b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
- d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - i. to, and around, each building and other roofed structure; and
 - ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959.

SAO68

The length of driveway:

- a. to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- b. has a maximum gradient no greater than 12.5%;
- c. have a minimum width of 3.5m;
- d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

SAO69

- a. A reticulated water supply is provided by a distributer retailer for the area or, where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures.
- b. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access to within 3m of that water storage source is provided.
- c. Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - i. a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank:
 - ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.

SAO70

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are exempt from the native clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;

- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

SA071

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house⁽²²⁾ and all associated facilities* or an extension to an existing dwelling house⁽²²⁾ only, and comprises an area no greater than 1500m².

Note - *All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.

Editor's note - See in heading above for other uses exempt from native vegetation clearing requirements.

Editor's note - Where self-assessable vegetation clearance is being undertaken, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

- co-locating all associated activities, infrastructure and access strips;
- ii. be the least valued area of koala habitat on the site;
- iii. minimise the footprint of the development envelope area;
- iv. minimise edge effects to areas external to the development envelope;
- v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy Environmental areas;
- vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where self-assessable vegetation clearing is being undertaken, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

SAO72

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

SAO73

Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

SA074

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

SAO75

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

SAO76

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

- a. construction of any building;
- b. laying of overhead or underground services;
- c. any sealing, paving, soil compaction;
- d. any alteration of more than 75mm to the ground level prior to work commencing.

SA077

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Landslid apply)	e hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria
SAO78	Development does not: a. involve earthworks exceeding 50m³; b. involve cut and fill having a height greater than 600mm; c. involve any retaining wall having a height greater than 600mm;
	c. involve any retaining wall having a height greater than 600mm;d. redirect or alter the existing flow of surface or groundwater.
SAO79	Buildings, excluding domestic outbuildings:
	a. are split-level, multiple-slab, pier or pole construction;b. are not single plane slab on ground.
SAO80	Development does not involve the manufacture, handling or storage of hazardous chemicals.
Overland apply)	flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria
SAO81	Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.
SAO82	Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.
	Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.
	Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow
SAO83	Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.
SAO84	Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.
SAO85	Development for a material change of use or building work for a Park ⁽⁵⁷⁾ ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.
	and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the assessment criteria apply)
Note - W1 wetland se	W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and tbacks.
SAO86	No development is to occur within:
	a. 50m from top of bank for W1 waterway and drainage line
	b. 30m from top of bank for W2 waterway and drainage line
	c. 20m from top of bank for W3 waterway and drainage line
	d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part B — Criteria for assessable development - Abbey precinct

Where development is code assessable development in the Table of Assessment, the assessment criteria for that development are set out in Part B, Table 6.2.2.1.2.

Where development is impact assessable, the assessment criteria becomes the whole of the planning scheme.

Table 6.2.2.1.2 Assessable development - Abbey precinct

Performance outcomes	Acceptable outcomes	
General criteria		
Building height		
P01	A01	
 Buildings and structures are of a height, scale and bul which: a. is consistent with the existing low rise, open and low density character and amenity of the site and its surrounds; b. is visually compatible with the existing buildings of structures and respects the existing amenity and character of the Abbey precinct; c. minimises the visual impact of large-scale built for whilst still providing for religious character height associated with Place of worship (60); d. does not detract from the amenity of surrounding existing or future rural and residential uses. 	identified on Overlay map - Building heights, except for architectural features associated with religious expression on Place of worship ⁽⁶⁰⁾ and Educational establishment ⁽²⁴⁾ buildings.	
Setbacks		
PO2	AO2	
Building setback:	Buildings and structures are setback as follows, unless otherwise indicated:	

- a. is sufficient to minimise overlooking and maintain privacy of adjoining properties;
- b. is sufficient to ensure development is not visually dominant or overbearing on adjoining properties;
- c. maintains the rural character of the site and its surrounds.
- a. road frontage 10m
- b. side boundary 10m
- c. rear boundary 10m

Specific rural uses setbacks

PO₃

Development ensures:

- a. chemical spray, fumes, odour, dust are contained on site;
- b. unreasonable nuisance or annoyance resulting from, but not limited to, noise, storage of materials and rubbish does not adversely impact upon land users adjacent to, or within the general vicinity;
- buildings and other structures are consistent with the open area, low density, low built form character and amenity associated with the surrounding rural environment.

AO₃

The following uses, associated buildings and structures are setback from all lot boundaries as follows:

- a. Animal husbandry (4) (buildings only) 10m
- b. Cropping⁽¹⁹⁾ (buildings only) 10m
- c. Intensive horticulture (40) 20m

Site cover

PO4

Development:

- maintains the low density, low rise built form and open space character of the site;
- b. ensures that buildings and structures are not overbearing, visually dominant or out of character with the surrounding built environment nor detract from the amenity of adjoining land.

AO4

Site cover of all buildings and structures does not exceed 20%.

Residential density

PO5

Housing provided on site:

- does not exceed a site density of 0.85 dwellings/hectare;
- b. remains subordinate to the primary use of the site;
- provides accommodation for people engaged in a lawful use of the site:
- maintains a direct nexus with the Place of worship⁽⁶⁰⁾ on the site.

No acceptable outcome provided.

Built form

PO6

Buildings and structures are designed and constructed to:

- incorporate a mix of colours and high quality materials to add diversification to treatments and finishes:
- avoid blank walls through facade articulation to create visual interest and deter graffiti and vandalism:
- c. activate and address the street, public area or public open space;
- d. reduce cluttering of plan and equipment on building roofs.

AO6.1

Development provides materials and finishes of a high quality that are not susceptible to stain, discolour or deterioration.

AO6.2

Development incorporates articulated walls with variation, detail and colour to reduce the bulk and impact of development and minimise expansive blank walls.

AO6.3

The main facade of the building directly addresses and faces the street and contains a mix of materials and colours.

AO6.4

Building utilities such as lift motor rooms and telecommunications equipment are designed to be visually integrated with the building.

Car parking

PO7

Traffic generation, vehicle movement and on-site car parking associated with an activity:

- a. provides safe, convenient and accessible access for vehicles and pedestrians;
- b. provides safe and convenient on-site parking and manoeuvring to meet anticipated parking demand;
- is appropriate to the road classification and carrying capacity of the local network and able to meet the additional demands generated by the development;
- d. does not result adverse impacts on the efficient and safe functioning of the road network.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

A07

On-site car parking is provided in accordance with Schedule 7 - Car parking.

Waste

PO8

Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.

No acceptable outcome provided.

Personal and property safety

PO9

Buildings and spaces are designed and constructed to create a safe and secure environment by incorporating key crime prevention through environmental design principles, including:

- a. casual surveillance opportunities and sight lines;
- b. way-finding cues and signage;
- c. light illuminates pathways and potential entrapment areas as well as maximising opportunities for penetration of natural light into spaces;
- d. minimise predictable routes and entrapment locations.

No acceptable outcome provided.

Amenity

PO10

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

No acceptable outcome provided.

Landscaping and screening

PO11

Landscaping and screening is provided in a manner that:

- achieves a high level of privacy and amenity to sensitive land uses on adjoining properties and when viewed from the street;
- reduces the visual impact of building bulk and presence and hard surface areas on the local character and amenity of adjoining sensitive land uses and from the street;
- c. creates a secure and safe environment by incorporating key elements of crime prevention through environmental design;
- d. achieves the design principles outlined in Planning scheme policy Integrated design.

No acceptable outcome provided.

Noise

PO12

Noise generating uses do not adversely affect existing noise sensitive uses.

No acceptable outcome provided.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

PO13

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- b. maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

AO13.1

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise

AO13.2

Noise attenuation structures (e.g. walls, barriers or fences):

- a. are not visible from an adjoining road or public area unless:
 - i. adjoining a motorway or rail line; or
 - ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- do not remove existing or prevent future active transport routes or connections to the street network;
- c. are located, constructed and landscaped in accordance with Planning scheme policy Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

Hazardous Chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO14

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

AO14.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO13.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.

AO14.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO13.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.

AO14.3

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - 14kPa overpressure;
 - ii. 12.6kW/m2 heat radiation

If criteria AO13.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.

PO15

Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

AO15

Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.

PO16

Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

AO16

Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.

PO17

Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

AO17.1

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively:

- a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and
- tank openings not provided with a liquid tight seal,
 i.e. an atmospheric vent, are extended above the relevant flood height level.

AO17.2

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area.

Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

Clearing of habitat trees where not located within the Environmental areas overlay map

PO18

- Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.
- b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.
- Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

No acceptable outcome provided

Works criteria

Utilities PO19 No acceptable outcome provided Where the site adjoins or is opposite to a Park (57) foreshore or Humpybong Reserve all existing overhead power lines are to be undergrounded for the full frontage of the site. **PO20 AO20** The development is connected to an existing reticulated Development is connected to underground electricity. electricity supply system approved by the relevant energy regulating authority. **PO21** No acceptable outcome provided The development has access to telecommunications and broadband services in accordance with current standards. **PO22** No acceptable outcome provided Where available the development is to safely connect to reticulated gas.

PO23

The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to public health.

AO23.1

Where in a sewered area, the development is connected to a reticulated sewerage network.

AO23.2

Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility.

Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.

AO23.3

Trade waste is pre-treated on-site prior to discharging into the sewerage network.

PO24

The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water.

AO24.1

Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.

AO24.2

Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development.

PO25

The development is provided with constructed and dedicated road access.

No acceptable outcome provided

Access

PO26

Development provides functional and integrated car parking and vehicle access, that:

 prioritises the movement and safety of pedestrians between car parking areas at the rear through to the 'main street' and the entrance to the building (e.g. rear entry, arcade etc.); No acceptable outcome provided

- b. provides safety and security of people and property at all times:
- c. does not impede active transport options;
- d. does not impact on the safe and efficient movement of traffic external to the site;
- e. where possible vehicle access points are consolidated and shared with adjoining sites.

Note - Refer to Planning scheme policy - Centre and neighbourhood hub design for details and examples.

PO27

Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.

No acceptable outcome provided

PO28

The layout of the development does not compromise:

- a. the development of the road network in the area;
- b. the function or safety of the road network;
- c. the capacity of the road network.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

AO28.1

Direct vehicle access for residential development does not occur from arterial or sub-arterial roads or a motorway.

Editor's note - Residential developments should consider amalgamation with the lot to the rear and gaining access via a laneway.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

AO28.2

The development provides for the extension of the road network in the area in accordance with Council's road network planning.

AO28.3

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.

AO28.4

The lot layout allows forward access to and from the site.

PO29

Safe access is provided for all vehicles required to access the site.

AO29.1

Site access and driveways are designed and located in accordance with:

- Where for a Council-controlled road, AS/NZS2890.1 section 3; or
- Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

AO29.2

Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.

AO29.3

Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.

PO30

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- b. ensure the orderly and efficient continuation of the active transport network;
- c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

 Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide No acceptable outcome provided

carriageway widening and underground drainage where required; or ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve. Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards. **Stormwater PO31** No acceptable outcome provided Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises. Note - Refer to Planning scheme policy - Integrated design for details. Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome. Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure. **PO32** No acceptable outcome provided Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site. Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome. **PO33** No acceptable outcome provided Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP. Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

No acceptable outcome provided

PO34

Easements for drainage purposes are provided over:

- a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm:
- b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

Site works and construction management

PO35

The site and any existing structures are maintained in a tidy and safe condition.

No acceptable outcome provided

PO36

All works on-site are managed to:

- minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- minimise as far as possible, impacts on the natural environment:
- ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises;
- avoid adverse impacts on street trees and their critical root zone.

AO36.1

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
- stormwater discharged to adjoining and downstream properties does not cause scour and erosion;
- c. stormwater discharge rates do not exceed pre-existing conditions;
- d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and
- the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins.

AO36.2

Stormwater runoff, erosion and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness

AO36.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

	AO36.4 Where works are proposed in proximity to an existing street tree, an inspection and a root management plan
	is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.
PO37	AO37
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.	No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.
PO38	AO38.1
All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape. Note - Where the amount of imported or exported material is greater	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.
than 50m³, a haulage route must be identified and approved by Council.	AO38.2
	All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).
C Plain	AO38.3 Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
PO39	AO39
All disturbed areas are rehabilitated at the completion of construction.	At completion of construction all disturbed areas of the site are to be:
Note - Refer to Planning scheme policy - Integrated design for details.	 a. topsoiled with a minimum compacted thickness of fifty (50) millimetres; b. grassed. Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.
PO40	AO40.1

The clearing of vegetation on-site:

- is limited to the area of infrastructure works, building areas and other necessary areas for the works; and
- includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;
- c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.

AO40.2

Disposal of materials is managed in one or more of the following ways:

- all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or
- b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

PO41

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

No acceptable outcome provided

Earthworks

PO42

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- a. the natural topographical features of the site;
- b. short and long-term slope stability;
- c. soft or compressible foundation soils;
- d. reactive soils;
- e. low density or potentially collapsing soils;
- f. existing fill and soil contamination that may exist on-site;
- g. the stability and maintenance of steep rock slopes and batters;
- h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note - Filling or excavation works are to be completed within six months of the commencement date.

AO42.1

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

AO42.2

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

AO42.3

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

AO42.4

All filling or excavation is contained on-site.

AO42.5

All fill placed on-site is:

- a. limited to that required for the necessary approved use:
- clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

AO42.6

The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

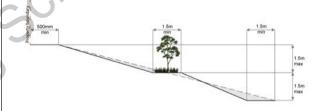

PO43

Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

AO43

Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Figure - Embankment

PO44

Filling or excavation is undertaken in a manner that:

- does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;
- does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO44.1

No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO44.2

Filling or excavation that would result in any of the following is not carried out on-site:

- a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

PO45

Filling or excavation does not result in land instability.

Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

No acceptable outcome provided

PO46

Development does not result in

- a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;
- b. increased flood inundation outside the site;
- any reduction in the flood storage capacity in the floodway:
- d. and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

No acceptable outcome provided.

Retaining walls and structures

PO47

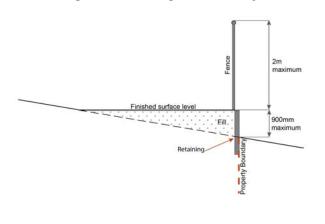

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

AO47

Earth retaining structures:

- a. are not constructed of boulder rocks or timber;
- where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary;

Figure - Retaining on boundary

- where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;
- d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal, terraced, landscaped and drained as shown below.

Figure - Cut

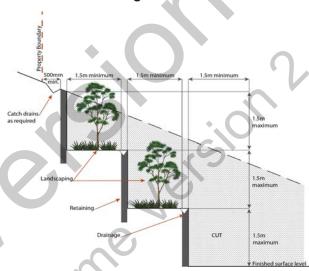

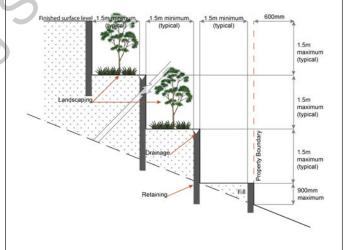

Figure - Fill

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or

 - iii.
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.

AND

b. none of the following exceptions apply:

- i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
- ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO48

Development incorporates a fire fighting system that:

- a. satisfies the reasonable needs of the fire fighting entity for the area;
- b. is appropriate for the size, shape and topography of the development and its surrounds;
- c. is compatible with the operational equipment available to the fire fighting entity for the area;
- considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
- e. considers the fire hazard inherent in the surrounds to the development site:
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

AO48.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

- a. in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
- in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- c. in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 for outdoor sales (54), processing or storage facilities,
 - for outdoor sales⁽³⁴⁾, processing or storage facilities hydrant coverage is required across the entire area of the outdoor sales⁽⁵⁴⁾, outdoor processing and outdoor storage facilities;
- d. in regard to fire hydrant accessibility and clearance requirements Part 3.5 and, where applicable, Part 3.6.

AO48.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO48.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

PO49

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

AO49

For development that contains on-site fire hydrants external to buildings:

- a. those external hydrants can be seen from the vehicular entry point to the site; or
- b. a sign identifying the following is provided at the vehicular entry point to the site:
 - i. the overall layout of the development (to scale);
 - ii. internal road names (where used);
 - iii. all communal facilities (where provided);
 - iv. the reception area and on-site manager's office (where provided);
 - v. external hydrants and hydrant booster points;
 - vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- a. in a form;
- b. of a size;
- c. illuminated to a level:

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5 m from the sign.

PO50

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

AO50

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

	Use specific criteria					
Cemetery ⁽¹²⁾						
PO51		No acceptable outcome provided.				
The	columbarium is:					
a.	for a maximum of 100 spaces;					
b.	no greater than 2m in height;					
C.	only for interment of members of the Confraternity;	100				
d. compatible with the scenic, ecological and rural qualities and function of the surrounding landscape.		369 101				
Chi	ld care centre ⁽¹³⁾					
POS	52	No acceptable outcome provided.				
Dev	elopment is:					
a.	located in the School Area on Map 1 - Abbey use areas;					
b.	setback 20m from the road frontage;					
c.	accessed by shared vehicle access points and access ways with the school;					
d.	compatible with the scenic, ecological or rural qualities and function of the surrounding landscape.					
Dwe	elling house (22)					
POS Dev	elopment is:	No acceptable outcome provided.				
a.	separated from other buildings by a minimum distance of 1.5m;					
b.	setback 50m from all property boundaries;					
c.	only used to accommodate members of the Confraternity;					
d.	compatible with the scenic, ecological or rural qualities and function of the surrounding landscape.					
Dwe	Dwelling house ⁽²²⁾ where including a secondary dwelling					
POS	54	AO54				
Dwelling house ⁽²²⁾ where including a secondary dwelling, the secondary dwelling:		Dwelling house ⁽²²⁾ where including a secondary dwelling, the secondary dwelling:				

- a. remains subordinate to the principal dwelling;
- b. retains its connection with the principal dwelling by:
 - avoiding the establishment of a separate access;
 - ii. being located within 20m of the principal Dwelling house⁽²²⁾;
 - iii. being a size, scale and design that is not visually dominant, overbearing and inconsistent with the low density, open area character of the precinct.

- a. has a maximum GFA of 100m²;
- b. obtains access from the existing driveway giving access to the Dwelling house⁽²²⁾;
- c. is setback 50m from all property boundaries;
- d. is located within 20m of the principal Dwelling house⁽²²⁾;
- e. is separated from other dwellings by a minimum distance of 1.5m;
- f. is only used to accommodate members of the Confraternity.

Educational establishment (24)

PO55

Development is:

- a. located in the School Area on Map 1 Abbey use areas;
- b. compatible with the scenic, ecological or rural qualities and function of the surrounding landscape.

No acceptable outcome provided.

Home based business (35)

PO56

Development:

- is subordinate in size and function of the primary use of the dwelling as a permanent residence;
- does not adversely impact upon the low density, low intensity built form and open area character and amenity of the precinct;
- c. ensures the nature, scale and intensity of the home based business⁽³⁵⁾ does not result in adverse visual or nuisance impacts on the residents in adjoining or nearby dwellings;
- results in a vehicular and pedestrian traffic generation consistent with that reasonably expected in the surrounding low density, low intensity built form and open area character and amenity of the surrounding rural area;
- e. ensures service and delivery vehicles do not negatively impact the amenity of the area.

No acceptable outcome provided.

PO57

AO57.1

Home based business⁽³⁵⁾ does not result in:

- an adverse visual, odour, particle drift or noise nuisance impact on the residents in adjoining or nearby dwellings;
- an adverse impact upon the low intensity and open area character and amenity anticipated in the locality;
- the establishment of vehicle servicing or major repairs, spray painting, panel beating or any environmentally relevant activity (ERA).

Home based business(s)⁽³⁵⁾ do not comprise of vehicle servicing or major repairs, including spray painting or panel beating is carried out on-site.

AO57.2

Home based business(s)⁽³⁵⁾ do not comprise an environmentally relevant activity (ERA) as defined in the *Environmental Protection Regulation 2008.*

AO57.3

Home base business(s) do not generate noise that is audible from the boundary of the site or premise.

PO58

On-site display and sale component is limited to the activities undertaken on the site and does not result in:

- the display and sale of goods being viewed from beyond the site;
- b. the overall development on the site having a predominantly commercial appearance.

AO58.1

Only goods grown, produced or manufactured on-site are sold from the site.

AO58.2

Display of goods grown, produced or manufactured on-site are contained within a dwelling or on-site structure and the display of goods is not visible from boundary of the site.

PO59

The hours of operation do not cause a nuisance or have a significant adverse impact on the amenity of residents on adjoining and surrounding properties.

AO59

The hours of operation do not exceed 8:00am to 6:00pm, Monday to Saturday and are not open to the public on Sunday's, Christmas Day, Good Friday and Anzac Day.

Note - Office $^{(53)}$ or administrative activities that do not generate non-residents visiting the site, such as book-keeping and computer work, may operate outside the hours of operation.

PO60

Bed and breakfast and farmstays are of a size and scale that:

- a. are consistent with the low intensity and open area character and amenity of the surrounding rural area;
- b. ensures acceptable levels of privacy and amenity for the residents in adjoining or nearby dwellings.

AO60

For bed and breakfast and farmstays:

- a. overnight accommodation is provided in the Dwelling house⁽²²⁾ of the accommodation operator.
- b. maximum 4 bedrooms are provided for a maximum of 10 guests.
- c. meals are served to paying guests only.
- d. rooms do not contain food preparation facilities.

Major electricity infrastructure (43), Substation and Utility installation (86)

PO61 AO61.1

The development does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- c. not visually dominant or intrusive;
- d. located behind the main building line;
- e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- f. camouflaged through the use of colours and materials which blend into the landscape;
- g. treated to eliminate glare and reflectivity;
- h. landscaped;
- otherwise consistent with the amenity and character of the zone and surrounding area.

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- a. are enclosed within buildings or structures;
- b. are located behind the main building line;
- c. have a similar height, bulk and scale to the surrounding fabric;
- d. have horizontal and vertical articulation applied to all exterior walls.

AO61.2

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

PO62

Infrastructure does not have an impact on pedestrian health and safety.

AO62

Access control arrangements

- a. do not create dead-ends or dark alleyways adjacent to the infrastructure;
- b. minimise the number and width of crossovers and entry points;
- c. provide safe vehicular access to the site;
- d. do not utilise barbed wire or razor wire.

PO63

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

- a. generates no audible sound at the site boundaries where in a residential setting; or
- b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

AO63

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

Market (46)

PO64

Markets⁽⁴⁶⁾ are located and laid out in a manner that provides for:

- convenient pedestrian access and movement between proposed stalls;
- b. view corridors and legibility between stalls to adjacent roads,
- directional and information signage and surrounding uses:
- d. pedestrian comfort and safety, including the provision of public toilet facilities;

No acceptable outcome provided.

- e. waste and rubbish disposal facilities appropriate to the type and scale of the proposed market (46);
- f. emergency vehicle access to and within the market⁽⁴⁶⁾;
- g. safe, convenient and accessible car parking is provided to meet demand.

Multiple dwelling (49)

PO65

Dwellings are:

- a. provided in the form of detached buildings;
- b. limited on-site to a maximum of 20;
- c. separated by a minimum distance of 1.5m and maximum distance of 10m;
- d. setback 50m from all property boundaries;
- used only to accommodate members of the Confraternity;
- f. compatible with the scenic, ecological or rural qualities and function of the surrounding landscape.

No acceptable outcome provided.

Rural workers' accommodation (71)

PO66

Rural workers' accommodation⁽⁷¹⁾:

- a. provides quarters only for staff employed to work the land for rural purposes;
- is compatible with the scenic, ecological or rural qualities and function of the surrounding landscape;
- c. is screened and landscaped in a manner so it is not visible from a road;
- d. does not result in adverse visual or noise nuisance on the residents in adjoining or nearby dwellings.

A066

Rural workers' accommodation⁽⁷¹⁾:

- a. is located in the Residential Area of Map 1 Abbey use areas;
- b. is limited to 1 per lot;
- c. consists of 1 structure;
- d. accommodates no more than 12 rural workers;
- e. obtains access from the existing driveway giving access to the Dwelling house⁽²²⁾.

Telecommunications facility (81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

PO67 AO67.1

Telecommunications facilities⁽⁸¹⁾ are co-located with existing telecommunications facilities⁽⁸¹⁾, Utility installation⁽⁸⁶⁾, Major electricity infrastructure⁽⁴³⁾ or Substation⁽⁸⁰⁾ if there is already a facility in the same coverage area.

New telecommunication facilities⁽⁸¹⁾ are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

AO67.2

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

PO68

A new Telecommunications facility⁽⁸¹⁾ is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

AO68

A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

PO69

Telecommunications facilities⁽⁸¹⁾ do not conflict with lawful existing land uses both on and adjoining the site.

A069

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

PO70

The Telecommunications facility⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- c. not visually dominant or intrusive;
- d. located behind the main building line;
- e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- f. camouflaged through the use of colours and materials which blend into the landscape;
- g. treated to eliminate glare and reflectivity;
- h. landscaped;
- otherwise consistent with the amenity and character of the zone and surrounding area.

A070.1

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

AO70.2

In all other areas towers do not exceed 35m in height.

AO70.3

Towers, equipment shelters and associated structures are of a design, colour and material to:

- a. reduce recognition in the landscape;
- b. reduce glare and reflectivity.

AO70.4

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

AO70.5 The facility is enclosed by security fencing or by other means to ensure public access is prohibited. AO70.6 A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design. Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design. **PO71** A071 Lawful access is maintained to the site at all times that An Access and Landscape Plan demonstrates how 24 does not alter the amenity of the landscape or surrounding hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's uses. context. **PO72** A072 All equipment comprising the Telecommunications facility⁽⁸¹⁾ which produces audible or non-audible sound All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site is housed within a fully enclosed building incorporating boundaries where in a residential setting. sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary. Tourist attraction (83) **PO73** No acceptable outcome provided. Development: is compatible with the scenic, ecological or rural a. qualities and function of the surrounding landscape; h. involving events, occur on an occasional and sporadic basis; provides convenient and safe pedestrian access and movement: is of a size, scale, intensity and design that minimises the potential for adverse noise, visual, privacy and traffic impacts on adjoining or nearby residents. Tourist park (84) **PO74** No acceptable outcome provided.

Development:

- is not, or does not act, as a permanent place of residence for persons where a typical period of time does not exceed 3 consecutive months;
- is of a size, scale, intensity and design that minimises the potential for adverse noise, visual, privacy and traffic impacts on adjoining or nearby residents:
- c. is compatible with the scenic, ecological or rural qualities and function of the surrounding landscape;
- d. provides suitable open space, buildings and facilities that meet the recreational, social and amenity needs of people staying on-site;
- e. provides landscaping to buffer adjoining properties from the activities occurring on-site.

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

PO75

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
- b. protects the environmental and ecological values and health of receiving waters;
- c. protects buildings and infrastructure from the effects of acid sulfate soils.

AO75

Development does not involve:

- a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or
- b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy – Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

PO76

Development:

- minimises the number of buildings and people working and living on a site exposed to bushfire risk;
- ensures the protection of life during the passage of a fire front:
- c. is located and designed to increase the chance of survival of buildings and structures during a bushfire;
- d. minimises bushfire risk from build up of fuels around buildings and structures;
- e. ensure safe and effective access for emergency services during a bushfire.

AO76.1

Buildings and structures are:

- a. not located on a ridgeline;
- not located on land with a slope greater than 15% (see Overlay map Landslide hazard);
- c. dwellings are located on east to south facing slopes.

AO76.2

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures:
- d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - i. to, and around, each building and other roofed structure; and
 - ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO77

Development and associated driveways and access ways:

- a. avoid potential for entrapment during a bushfire;
- b. ensure safe and effective access for emergency services during a bushfire;
- c. enable safe evacuation for occupants of a site during a bushfire.

AO77

A length of driveway:

- to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- b. has a maximum gradient no greater than 12.5%;
- c. have a minimum width of 3.5m;
- d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

PO78

Development provides an adequate water supply for fire-fighting purposes.

AO78

- a reticulated water supply is provided by a distributer retailer for the area or;
- where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
- c. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access is provided to within 3m of that water storage source.
- d. Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - i. a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
 - ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

PO79

Development:

- does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
- b. does not present danger or difficulty to emergency services for emergency response or evacuation.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

AO79

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are exempt from the native vegetation clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO80

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy Environmental areas*.

* Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No acceptable outcome provided.

PO81

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- a. retaining habitat trees;
- b. providing contiguous patches of habitat;

No acceptable outcome provided.

c. provide replacement and rehabilitation planting to improve connectivity;	
 d. avoiding the creation of fragmented and isolated patches of habitat; 	
e. providing wildlife movement infrastructure.	
Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.	• 0
Vegetation clearing and habitat protection	
PO82	No acceptable outcome provided.
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	0) 18/8,
PO83	No acceptable outcome provided.
Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will: a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.	Scheine
PO84	No acceptable outcome provided.
Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:	
a. providing contiguous patches of habitat;b. avoiding the creation of fragmented and isolated	
patches of habitat; c. providing wildlife movement infrastructure;	
d. providing replacement and rehabilitation planting to improve connectivity.	
Vegetation clearing and soil resource stability	
PO85	No acceptable outcome provided.
Development does not:	

a.

result in soil erosion or land degradation;

leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

Vegetation clearing and water quality

PO86

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

- ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
- b. avoiding or minimising changes to landforms to maintain hydrological water flows;
- adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities.

No acceptable outcome provided.

PO87

Development minimises adverse impacts of stormwater run-off on water quality by:

- a. minimising flow velocity to reduce erosion;
- b. minimising hard surface areas;
- c. maximising the use of permeable surfaces;
- d. incorporating sediment retention devices;
- e. minimising channelled flow.

No acceptable outcome provided

Vegetation clearing and access, edge effects and urban heat island effects

PO88

Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment. No acceptable outcome provided.

PO89

Development minimises potential adverse 'edge effects' on ecological values by:

- a. providing dense planting buffers of native vegetation between a development and environmental areas;
- retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;
- d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- e. landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and

No acceptable outcome provided.

light pollution, increased fire frequency and changes in the groundwater and surface water flow.

PO90

Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- pervious surfaces;
- b. providing deeply planted vegetation buffers and green linkage opportunities;
- c. landscaping with local native plant species to achieve well-shaded urban places;
- d. increasing the service extent of the urban forest canopy.

No acceptable outcome provided.

Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

PO91

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.

No acceptable outcome provided.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO92

Development will:

- not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- b. protect the fabric and setting of the heritage site, object or building;

AO92

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The

- c. be consistent with the form, scale and style of the heritage site, object or building;
- d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
- e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
- f. retain public access where this is currently provided.

plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

PO93

Demolition and removal is only considered where:

- a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
- c. limited demolition is performed in the course of repairs, maintenance or restoration; or
- demolition is performed following a catastrophic event which substantially destroys the building or object.

No acceptable outcome provided.

PO94

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No acceptable outcome provided.

PO95

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

AO95

Development does:

- a. not result in the removal of a significant tree;
- b. not occur within 20m of a protected tree;
- involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard.

PO96

Development:

- maintains the safety of people and property on a site and neighbouring sites from landslides;
- b. ensures the long-term stability of the site considering the full nature and end use of the development;
- c. ensures site stability during all phases of construction and development;
- minimises disturbance of natural drainage patterns of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater
- e. minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

A096

Development does not:

- involve earthworks exceeding 50m³;
- b. involve cut and fill having a height greater than 600mm;
- c. involve any retaining wall having a height greater than 600mm;
- d. redirect or alter the existing flow of surface or groundwater.

PO97

Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

- a. minimising overuse of cut and fill to create single flat pads and benching;
- avoiding expanses of retaining walls, loss of trees and vegetation and interference with natural drainage systems;
- c. minimising any adverse visual impact on the landscape character;
- d. Protect the amenity of adjoining properties.

A097

Buildings, excluding domestic outbuildings:

- a. are split-level, multiple-slab, pier or pole construction;
- b. are not single plane slab on ground.

PO98

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

- a. the long-term stability of the development site considering the full nature and end use of the development;
- site stability during all phases of construction and development;
- the development is not adversely affected by landslide activity originating on sloping land above the site;
- d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

A098

Development does not involve the manufacture, handling or storage of hazardous chemicals.

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

PO99

No acceptable outcome provided.

Development: minimises the risk to persons from overland flow; does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. PO100 AO100 No acceptable outcome provided. Development: maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment; does not concentrate, intensify or divert overland b. flow onto an upstream, downstream or surrounding property. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow. PO101 No acceptable outcome provided. Development does not: directly, indirectly or cumulatively cause any a. increase in overland flow velocity or level; increase the potential for flood damage from b. overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure. Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring. PO102 AO102 Development ensures that public safety and the risk to Development ensures that a hazardous chemical is not the environment are not adversely affected by a located or stored in an Overland flow path area. detrimental impact of overland flow on a hazardous chemical located or stored on the premises. Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances. **PO103** AO103

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.

PO104

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow

AO104.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- a. Urban area Level III;
- b. Rural area N/A;
- c. Industrial area Level V;
- d. Commercial area Level V.

AO104.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

PO105

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- an overland flow path where it crosses more than one premises;
- c. inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided.

Additional criteria for development for a Park (57)

PO106

Development for a Park⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- a. public benefit and enjoyment is maximised;
- b. impacts on the asset life and integrity of park structures is minimised;
- c. maintenance and replacement costs are minimised.

AO106

Development for a Park⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks

PO107

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- a. impact on fauna habitats;
- b. impact on wildlife corridors and connectivity;
- c. impact on stream integrity;
- d. impact of opportunities for revegetation and rehabilitation planting;
- e. edge effects.

AO107

Development does not occur within:

- 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line
- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

LEGEND School Area Residential Area

Map 1 - Abbey uses area

6.2.2.2 Airfield precinct

6.2.2.2.1 Purpose – Airfield precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the Airfield precinct:
 - a. This precinct comprises the Caboolture and Redcliffe airfields, and is used predominantly for:
 - i. the arrival and departure of aircraft;
 - ii. the housing, refuelling, maintenance and repair of aircraft;
 - iii. the assembly and dispersal of passengers or goods on or from an aircraft;
 - iv. ancillary activities directly serving the needs of passengers and visitors;
 - v. associated training and education facilities;
 - vi. the operation of occasional air shows;
 - vii. other aviation facilities.
 - b. The Caboolture airfield is a recreational airstrip, where commercial operations are not located on the main airfield site;
 - c. The Redcliffe airfield provides a range of air services, including recreational and commercial operations;
 - d. Air traffic generated by air services remain within the capacity of the airfield;
 - e. Development protects and maintains safe and efficient airfield operations, avoids significant adverse effects on the natural environment and minimises impacts on adjacent land.
 - f. Development is designed and operated to provide a high level of amenity and maintains the safety of people and property through Crime Prevention Through Environmental Design principles (CPTED).
 - g. Development is of a scale, height and bulk that provides a high level of amenity and is consistent with the character of the surrounding area.
 - h. Where applicable, development is undertaken in accordance with a Council Master Plan approved under Council policy.
 - i. General works associated with the development achieves the following:
 - new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

- j. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
- k. Noise generating uses are designed, sited, constructed and operated to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
- I. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
- m. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
 - viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
 - ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
 - x. ensuring effective and efficient disaster management response and recovery capabilities;
 - xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- n. Development in the Airfield precinct includes one or more of the following:

• Air services ⁽³⁾	•	Caretaker's accommodation ⁽¹⁰⁾	•	Community use ⁽¹⁷⁾ - if for a Museum
	•	Club ⁽¹⁴⁾ - if associated with aviation		ioi a Mascaiii

Development in the Airfield precinct does not include any of the following: Ο.

Γ		A -1 - 14 - 4 (1)		11:-1-1 (34)		Danassahla
	•	Adult store ⁽¹⁾	•	High Impact industry ⁽³⁴⁾	•	Renewable energy facility ⁽⁶³⁾

	•	Health care services ⁽³³⁾	•	Relocatable home park ⁽⁶²⁾	•	Winery ⁽⁹⁰⁾
L						

Development not listed in the tables above may be considered on its merits and where it reflects and p. supports the outcomes of the zone.

6.2.2.2.2 Criteria for assessment

To determine if development is self-assessable, development must comply with the self-assessable acceptable outcomes set out in Part C, Table 6.2.2.2.1. Where development does not meet a self-assessable acceptable outcome (SAO) of the relevant criteria Part C Table 6.2.2.2.1, assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a SAO is not met, and is therefore limited to the subject matter of the SAOs that are not complied with. To remove any doubt, for those SAOs that are complied with, there is no need for assessment against the corresponding PO.

Self-assessable acceptable outcomes (SAO)	Corresponding performance outcomes (PO)

Part C- Criteria for self-assessable development - Airfield precinct

Table 6.2.2.2.1 Self-assessable development - Airfield precinct

Self-assessable acceptable outcomes						
General criteria						
Building height						
SAO1	Building height:					
	a. complies with air regulations for obstacle heights with proximity to runways;					
	b. does not exceed 8.5m where within 10m of the General residential zone.					
Car parki	ng					
SAO2	On-site car parking is provided in accordance with Schedule 7 - Car parking.					
SAO3	Car parking at the Redcliffe airfield is not provided in the airside area (on the runway side of buildings).					
SAO4	Cycle parking spaces are provided at a minimum of 1 space per 200m ² of GFA.					
Waste	S					
SAO5	Bins and bin store areas are provided, designed and managed in accordance with Planning scheme policy - Waste.					
Lighting						
SAO6	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.					
	Note - Lighting on the outside of hangars and other buildings comply with any relevant air traffic regulator legislative requirements. Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.					
Hazardou	us Chemicals					
SA07	All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Table 9.0.1 Hazardous Chemicals Self-Assessable Thresholds, complies with Schedule 9, Table 9.0.3 Hazardous Chemicals Self-Assessable Criteria.					
SAO8	Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Table 9.0.2 Hazardous Chemicals Assessable Thresholds.					
Clearing	of habitat trees where not located in the Environmental areas overlay map					
SAO9	Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:					
	a. Clearing of a habitat tree located within an approved development footprint;					

- b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

Works criteria **Utilities SAO10** Where available, the development is connected to: an existing reticulated electricity supply; a. telecommunications and broadband; reticulated sewerage; C. reticulated water: d. constructed and dedicated road. **SA011** Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility. Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code. SA012 Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development. **Access**

Any new or changes to existing site access and driveways are designed and located in accordance with:

Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994,

Where for a Council-controlled road, AS/NZS2890.1 section 3; or

SAO13

a.

section 62 approval.

Moreton Bay Regional Council Planning Scheme Commenced 1 February 2016

SAO14 Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design. **Stormwater SAO15** Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design. Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure. **SAO16** Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy - Integrated design if the development: a. is for urban purposes only; b. involves a land area greater than 2500m² will result in 6 or more dwellings; will result in an impervious area greater than 25% of the net developable area. Site works and construction management The site and any existing structures are to be maintained in a tidy and safe condition. **SAO17 SAO18** Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design. **SAO19** Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. **SAO20** All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works. **SAO21** Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification. **SAO22** Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times. **Earthworks**

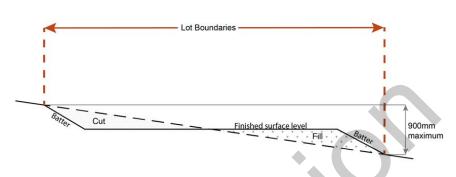

Earthworks

SAO23 The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

SAO24 The total of all cut and fill on-site does not exceed 900mm in height.

Note - This is site earthworks not building work.

SAO25

Filling or excavation does not result in:

- a reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

Note - Public sector entity is defined in the Sustainable Planning Act 2009

Fire services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or ii.

 - material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

SAO26

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005):

in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

- b. in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- c. in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls
 of those buildings;
 - ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 - iii. for outdoor sales ⁽⁵⁴⁾, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales ⁽⁵⁴⁾, outdoor processing and outdoor storage facilities; and
- d. in regard to fire hydrant accessibility and clearance requirements Part 3.5 and where applicable, Part 3.6

SAO27

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

SAO28

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

SAO29

For development that contains on-site fire hydrants external to buildings:

- a. those external hydrants can be seen from the vehicular entry point to the site; or
- b. a sign identifying the following is provided at the vehicular entry point to the site:
 - i. the overall layout of the development (to scale);
 - ii. internal road names (where used);
 - iii. all communal facilities (where provided);
 - iv. the reception area and on-site manager's office (where provided);
 - v. external hydrants and hydrant booster points;
 - vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- a. in a form;
- b. of a size;
- c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

SAO30

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific criteria

Air services (3)

- SAO31 Air services⁽³⁾ do not involve flight training or education activities that increase the number of fixed or rotary wing aircraft take-offs, landings or circuits.
- SAO32 Activities on Lot 451 on SP169564 are not commercial in nature unless specified in the Management Plan (under the *Land Act 1994*) for that parcel.

Caretaker's accommodation⁽¹⁰⁾

- **SAO33** A caretaker's accommodation⁽¹⁰⁾ has a maximum GFA of 80m².
- SAO34 No more than 1 caretaker's accommodation (10) is established per site.
- **SAO35** Does not gain access from a separate driveway to the main use on the site.
- **SAO36** Includes a minimum 16m² of private open space directly accessible from a habitable room.
- **SAO37** Provide car parking in accordance with Schedule 7 Car parking.

Club⁽¹⁴⁾

- SAO38 Limited to 1 club⁽¹⁴⁾ each at the Caboolture and Redcliffe Airfields respectively.
- SAO39 Development does not exceed 200m² GFA.

Telecommunications facility⁽⁸¹⁾

Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

SAO40 A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

SAO41 The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under

an existing development approval.

SAO42 Equipment shelters and associated structures are located:

- a. directly beside the existing equipment shelter and associated structures;
- b. behind the main building line;
- c. further away from the frontage than the existing equipment shelter and associated structures;
- d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

SAO43	Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.
SAO44	The facility is enclosed by security fencing or by other means to ensure public access is prohibited.
SAO45	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.
	Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.
	Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.
SAO46	All equipment comprising the telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

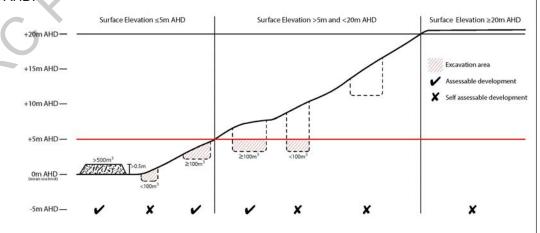

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

SAO47

Development does not involve:

- a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or
- b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD.

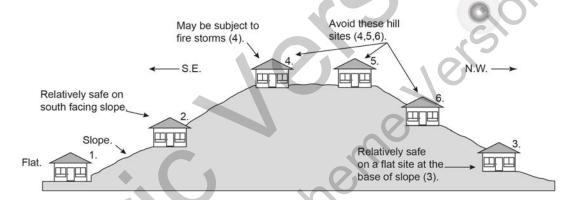

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

SAO48

- a. Building and structures are:
 - i. not located on a ridgeline
 - ii. not located on land with a slope greater than 15% (see Overlay map Landslide hazard)
- Dwellings are located on east to south facing slopes.

House Sites Numbered in Order of Degree of Fire Safety

(1 being the safest, 6 being the most hazardous.)
From Bushfire Prone Areas: Siting and Design of Residential
Buildings (1997), Queensland Department of Local Government
and Planning, and Queensland Fire & Rescue Service.

SAO49

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
- d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - i. to, and around, each building and other roofed structure; and
 - ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959.

SAO50

The length of driveway:

- a. to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- b. has a maximum gradient no greater than 12.5%;
- c. have a minimum width of 3.5m;
- d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

SAO51

- a. A reticulated water supply is provided by a distributer retailer for the area or, where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures.
- b. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access to within 3m of that water storage source is provided.
- c. Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - i. a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;
 - ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.

SAO52

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are exempt from the native clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

SAO53

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house⁽²²⁾ and all associated facilities* or an extension to an existing dwelling house⁽²²⁾ only, and comprises an area no greater than 1500m².

Note - *All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.

Editor's note - See in heading above for other uses exempt from native vegetation clearing requirements

Editor's note - Where self-assessable vegetation clearance is being undertaken, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

- i. co-locating all associated activities, infrastructure and access strips;
- ii. be the least valued area of koala habitat on the site;
- iii. minimise the footprint of the development envelope area;
- iv. minimise edge effects to areas external to the development envelope;
- v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy Environmental areas;
- vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where self-assessable vegetation clearing is being undertaken, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

SAO54

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

- Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

SAO55

Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

SAO56

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

SAO57

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

SAO58

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

- construction of any building;
- b. laying of overhead or underground services;
- c. any sealing, paving, soil compaction;
- any alteration of more than 75mm to the ground level prior to work commencing.

SAO59

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

SAO60

Development does not:

- a. involve earthworks exceeding 50m³;
- b. involve cut and fill having a height greater than 600mm;
- c. involve any retaining wall having a height greater than 600mm;
- d. redirect or alter the existing flow of surface or groundwater.

SAO61

Buildings, excluding domestic outbuildings:

- a. are split-level, multiple-slab, pier or pole construction;
- b. are not single plane slab on ground.

SAO62

Development does not involve the manufacture, handling or storage of hazardous chemicals.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

SAO63

Development does not include the following uses located within a landfill site buffer:

- a. caretaker's accommodation (10);
- b. community residence⁽¹⁶⁾;
- c. dual occupancy⁽²¹⁾;
- d. dwelling house; (22)
- e. dwelling unit⁽²³⁾;
- f. hospital⁽³⁶⁾:
- g. rooming accommodation⁽⁶⁹⁾;
- h. multiple dwelling⁽⁴⁹⁾:
- i. non-resident workforce accommodation⁽⁵²⁾;
- j. relocatable home park⁽⁶²⁾;
- k. residential care facility (65):
- I. resort complex⁽⁶⁶⁾;
- m. retirement facility (67);
- n. rural workers' accommodation⁽⁷¹⁾;
- o. short term accommodation⁽⁷⁷⁾;
- p. tourist park⁽⁸⁴⁾.

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)

SAO64

Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.

SAO65

Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow

SAO66

Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.

SAO67

Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.

SAO68

Development for a material change of use or building work for a Park⁽⁵⁷⁾ ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following assessment criteria apply)

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

SAO69

No development is to occur within:

- a. 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line

- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations

Note - The minimum setback distance applies to the each side of waterway.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part D — Criteria for assessable development - Airfield precinct

Where development is code assessable development in the Table of Assessment, the assessment criteria for that development are set out in Part D, Table 6.2.2.2.2.

Where development is impact assessable, the assessment criteria becomes the whole of the planning scheme.

Table 6.2.2.2.2 Assessable development - Airfield precinct

Performance outcomes	Acceptable outcomes	
Built form and design		
P01	AO1	
Buildings and structures are of a height, scale and bulk which:	Building height:	
a. is consistent with the operation of an airfield;	a. complies with air regulations for obstacle heights with proximity to runways;	
b. is in keeping with existing buildings or structures;	b. does not exceed 8.5m where within 10m of the General residential zone.	
c. minimises the visual impact of large-scale built form;		
d. does not cause adverse amenity impacts on nearby sensitive land uses and zones.		
PO2	AO2.1	
Buildings and structures are designed and constructed to a high standard of design and construction, which:	Development provides materials and finishes of a high quality that are not susceptible to stain, discolour or deterioration.	
	AO2.2	

- a. adds visual interest to the streetscape, through variation in building materials, colours and features:
- b. does not result in blank, unarticulated walls fronting streets or public areas;
- c. articulates and identifies the administration and customer service areas of the building;
- avoid blank walls through façade articulation to create visual interest and deter graffiti and vandalism:
- e. incorporates high quality, low maintenance building materials;
- f. does not utilise reflective materials;
- g. reduce cluttering and visibility of plant and equipment on building roofs.

Development incorporates articulated walls with variation, detail and colour to reduce the bulk and impact of development and minimise expansive blank walls.

AO2.3

The main facade of the building directly addresses and faces the street and contains a mix of materials and colours.

AO2.4

Building utilities such as air conditioning units and telecommunications equipment are designed to be visually integrated with the building.

Landscaping

PO₃

Landscaping and screening is provided on the site to:

- a. visually soften the built form, areas of hardstand and storage areas;
- reduces the visual impact of building bulk and presence, hard surface areas and mechanical plant associated with the on-site activities when viewed from the street;
- c. creates a secure and safe environment by incorporating key elements of crime prevention through environmental design;
- d. achieves the design principles outlined in Planning scheme policy - Integrated design.

AO3

Landscaping is provided and maintained in accordance with Planning scheme policy - Integrated design.

Fencing

PO4

The provision of fencing on site:

- a. does not dominate the street or create safety issues;
- b. provides the level of security suitable to the nature of the use.

A04

Where fencing is provided on the street frontage, it has a minimum transparency of 70%.

Public access

PO5 AO5.1

The use has a safe, clearly identifiable public access separate from service and vehicle and aircraft parking areas.

Pedestrian linkages are provided from the car parking areas directly to the main entrance of the building.

AO5.2

Public access to the building is not provided through aircraft parking areas, service areas or, in the case of the Redcliffe airfield, in the airside area.

Personal and property safety

PO6

Buildings and spaces are designed and constructed to create a safe and secure environment by incorporating key crime prevention through environmental design principles, including:

- a. casual surveillance opportunities and sight lines;
- b. way-finding cues and signage;
- light illuminates pathways and potential entrapment areas as well as maximising opportunities for penetration of natural light into spaces;
- d. minimise predictable routes and entrapment locations.

No acceptable outcome provided.

Amenity

PO7

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, noise, light, chemicals and other environmental nuisances.

No acceptable outcome provided.

Car parking

PO8

Car parking is provided on-site to meet the anticipated demand of employees and visitors and avoid adverse impacts on the external road network.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

AO8

Car parking is provided in accordance with Schedule 7 - Car parking.

PO9

At the Redcliffe airfield, adequate parking is provided away from aircraft movement areas.

AO9

Car parking at the Redcliffe airfield is not located in the airside area.

PO10

AO10

The design of vehicle entry points and car parking areas:

- does not impact on the safety of the external road network;
- b. ensures the safety of pedestrians at all times;
- c. ensures the safe movement of vehicles within the site:
- d. provides connections with car parking areas on adjoining sites where possible.

All vehicle entry points and car parking areas are designed and constructed in accordance with Australian Standard AS2890.1.

Traffic matters

PO11 AO11

Traffic generation, vehicle movement and on-site car parking associated with an activity:

- a. provides safe, convenient and accessible access for vehicles and pedestrians;
- provides safe and convenient on-site parking and manoeuvring to meet anticipated parking demand:
- is appropriate to the road classification and carrying capacity of the local network and able to meet the additional demands generated by the development;
- d. does not result adverse impacts on the efficient and safe functioning of the road network.

No acceptable outcome provided

Environmental impacts

PO12 AO12

Where a use is not an environmentally relevant activity under the *Environmental Protection Act 1994*, the release of any contaminant that may cause environmental harm is mitigated to an acceptable level.

Development achieves the standard listed in *Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy* 2008.

PO13 AO13

Where a use is not an environmentally relevant activity under the *Environmental Protection Act 1994*, noise emissions at receptor sites are mitigated to an acceptable level.

Development does not generate noise exceeding the standards listed in *Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.*

Loading and servicing

PO14 No acceptable outcome provided.

Loading and servicing areas:

6 Zones

- a. are not visible from the street frontage;
- b. are integrated into the design of the building;
- c. include screening and buffers to reduce negative impacts on adjoining sensitive land uses;
- d. where possible loading and servicing areas are consolidated and shared with adjoining sites.

Waste

PO15

Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.

No acceptable outcome provided.

Noise

PO16

Noise generating uses do not adversely affect existing noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

No acceptable outcome provided.

PO17

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- b. maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

AO17.1

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.

AO17.2

Noise attenuation structures (e.g. walls, barriers or fences):

- a. are not visible from an adjoining road or public area unless:
 - i. adjoining a motorway or rail line; or
 - ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- do not remove existing or prevent future active transport routes or connections to the street network;
- c. are located, constructed and landscaped in accordance with Planning scheme policy Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map — Active transport for future active transport routes.

Hazardous chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO18

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

AO18.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

- a. For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO19.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.

AO18.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

a. For any hazard scenario involving the release of gases or vapours:

i. ii. If criteri of any f	AEGL2 (60minutes) or if not available ERPG2; An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure. or any hazard scenario involving fire or explosion: 7kPa overpressure; 4.7kW/m2 heat radiation. a AO19.2 (a) or (b) cannot be achieved, then the risk oreseeable hazard scenario shall not exceed an all fatality risk level of 5 x 10-6/year. impacts or risks from any foreseeable hazard or does not exceed the dangerous dose at the rry of an industrial land use zone as described below:
b. Fo i. ii. If criteriof any findividu	normal atmospheric pressure. or any hazard scenario involving fire or explosion: 7kPa overpressure; 4.7kW/m2 heat radiation. a AO19.2 (a) or (b) cannot be achieved, then the risk oreseeable hazard scenario shall not exceed an al fatality risk level of 5 x 10-6/year. impacts or risks from any foreseeable hazard o does not exceed the dangerous dose at the
i. ii. If criteriof any findividu	7kPa overpressure; 4.7kW/m2 heat radiation. a AO19.2 (a) or (b) cannot be achieved, then the risk oreseeable hazard scenario shall not exceed an al fatality risk level of 5 x 10-6/year. impacts or risks from any foreseeable hazard o does not exceed the dangerous dose at the

of any f	a AO19.3 (a) or (b) cannot be achieved, then the risk oreseeable hazard scenario shall not exceed an al fatality risk level of 50 x 10-6/year.
PO19 AO19	
hazardous chemicals are designed to detect the early chemical	gs and package stores containing fire-risk hazardous als are provided with 24 hour monitored fire detection for early detection of a fire event.
PO20 AO20	
hazardo	e areas containing packages of flammable and toxic bus chemicals are designed with spill containment (s) capable of containing a minimum of the total

Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.

PO21

Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

AO21.1

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively:

- a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and
- b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

AO21.2

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

Clearing of habitat trees where not located within the Environmental areas overlay map

PO22

- Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.
- b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.
- Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

No acceptable outcome provided

Works criteria

Utilities

	T
PO23	AO23
The development is connected to an existing reticulated electricity supply system approved by the relevant energy regulating authority.	Development is connected to underground electricity.
PO24 The development has access to telecommunications and broadband services in accordance with current standards.	No acceptable outcome provided
PO25 The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to public health.	AO25.1 Where in a sewered area, the development is connected to a reticulated sewerage network. AO25.2
PO26 The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water.	Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility. Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.
	AO25.3 Trade waste is pre-treated on-site prior to discharging into the sewerage network.
	Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.
	Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development.
PO27 The development is provided with constructed and dedicated road access.	No acceptable outcome provided

Access

PO28

Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.

No acceptable outcome provided

PO29

The layout of the development does not compromise:

- a. the development of the road network in the area;
- b. the function or safety of the road network;
- c. the capacity of the road network.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

AO29.1

The development provides for the extension of the road network in the area in accordance with Council's road network planning.

AO29.2

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.

AO29.3

The lot layout allows forward access to and from the site.

PO30

Safe access is provided for all vehicles required to access the site.

AO30.1

Site access and driveways are designed and located in accordance with:

- a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or
- Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

AO30.2

Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.

AO30.3

Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.

PO31

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- b. ensure the orderly and efficient continuation of the active transport network;
- ensure the existing car parking capacity is maintained.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome, refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network in mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. Of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

- Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or
- iii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

No acceptable outcome provided

Stormwater

PO32

Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.	
PO33	No acceptable outcome provided
Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.	
Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.	
PO34	No acceptable outcome provided
Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP. Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.	Scheme
PO35	No acceptable outcome provided
Easements for drainage purposes are provided over:	
 a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm; 	
b. overland flow paths where they cross more than one property boundary.	
Note - Refer to Planning scheme policy - Integrated design for details.	
Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.	
Site works and construction management	
PO36	No acceptable outcome provided
The site and any existing structures are maintained in a tidy and safe condition.	
PO37	AO37.1

All works on-site are managed to:

- minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- b. minimise as far as possible, impacts on the natural environment;
- ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises;
- avoid adverse impacts on street trees and their critical root zone.

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions;
- b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion;
- c. stormwater discharge rates do not exceed pre-existing conditions:
- d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and
- e. the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins.

AO37.2

Stormwater runoff, erosion and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

AO37.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

AO37.4

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

PO38

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

AO38

No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

PO39

All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

AO39.1

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

AO39.2 Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and All contractor car parking is either provided on the approved by Council. development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD). AO39.3 Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times. **PO40** AO40 All disturbed areas are rehabilitated at the completion At completion of construction all disturbed areas of the site of construction. are to be: topsoiled with a minimum compacted thickness of fifty a. Note - Refer to Planning scheme policy - Integrated design for (50) millimetres; details. grassed. b. Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas. **PO41** A041.1 The clearing of vegetation on-site: All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. is limited to the area of infrastructure works, building areas and other necessary areas for Note - No parking of vehicles of storage of machinery or goods is to the works: and occur in these areas during development works. includes the removal of declared weeds and b. other materials which are detrimental to the intended use of the land; AO41.2 is disposed of in a manner which minimises Disposal of materials is managed in one or more of the nuisance and annoyance to existing premises. following ways: Note - No burning of cleared vegetation is permitted. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site. Note - The chipped vegetation must be stored in an approved location,

preferably a park or public land.

No acceptable outcome provided

PO42

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

Earthworks

PO43

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- a. the natural topographical features of the site;
- b. short and long-term slope stability;
- c. soft or compressible foundation soils;
- d. reactive soils;
- e. low density or potentially collapsing soils;
- f. existing fill and soil contamination that may exist on-site;
- g. the stability and maintenance of steep rock slopes and batters;
- h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note - Filling or excavation works are to be completed within six months of the commencement date.

AO43.1

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

AO43.2

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

AO43.3

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

A043.4

All filling or excavation is contained on-site.

AO43.5

All fill placed on-site is:

- a. limited to that required for the necessary approved use;
- clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

AO43.6

The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

PO44

Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

AO44

Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Figure - Embankment

PO45

Filling or excavation is undertaken in a manner that:

- does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;
- does not preclude reasonable access to a
 Council or public sector entity maintained
 infrastructure or any drainage feature on, or
 adjacent to the land for monitoring, maintenance
 or replacement purposes.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO45.1

No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO45.2

Filling or excavation that would result in any of the following is not carried out on-site:

- a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

PO46

Filling or excavation does not result in land instability.

Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

No acceptable outcome provided

PO47

Development does not result in

- a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;
- b. increased flood inundation outside the site;
- c. any reduction in the flood storage capacity in the floodway;
- d. and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning

scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

Retaining walls and structures

PO48

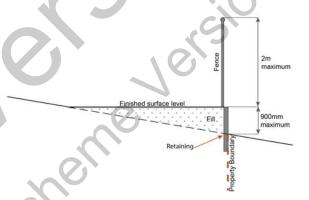

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

AO48

Earth retaining structures:

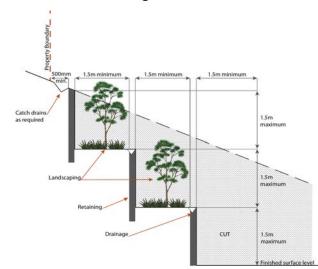

- a. are not constructed of boulder rocks or timber;
- b. where height is no greater than 900mm, are provided in accordance with Figure Retaining on a boundary;

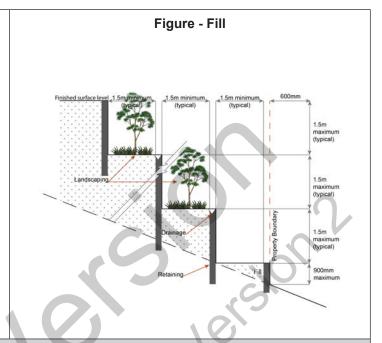

Figure - Retaining on boundary

- c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;
- d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal, terraced, landscaped and drained as shown below.

Figure - Cut

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
 - iii.
 - material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply:
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO49

Development incorporates a fire fighting system that:

- satisfies the reasonable needs of the fire fighting a. entity for the area;
- b. is appropriate for the size, shape and topography of the development and its surrounds;
- is compatible with the operational equipment C. available to the fire fighting entity for the area;
- d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

AO49.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

- e. considers the fire hazard inherent in the surrounds to the development site;
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

- in regard to the general locational requirements for fire hydrants
 Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- c. in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 - for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities:
- d. in regard to fire hydrant accessibility and clearance requirements
 Part 3.5 and, where applicable, Part 3.6.

AO49.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO49.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian* Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

PO50

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

AO50

For development that contains on-site fire hydrants external to buildings:

- a. those external hydrants can be seen from the vehicular entry point to the site; or
- b. a sign identifying the following is provided at the vehicular entry point to the site:
 - the overall layout of the development (to scale);
 - ii. internal road names (where used);
 - iii. all communal facilities (where provided);
 - iv. the reception area and on-site manager's office (where provided);

- v. external hydrants and hydrant booster points;
- vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- a. in a form:
- b. of a size;
- c. illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

PO51

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

AO51

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant indication system* produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific criteria

Air services (3)

PO52

Demonstrate capacity of existing infrastructure and airstrip to accommodate additional aircraft movements without adversely impacting amenity of surrounding residential uses and affecting the safe operation of the aerodrome.

No acceptable outcome provided.

Caretaker's accommodation (10)

PO53

Development for a caretaker's accommodation (10):

- a. does not compromise the productivity of the use;
- b. is domestic in scale;
- c. provides adequate car parking provisions exclusive to the primary use of the site;

AO53

Caretaker's accommodation (10):

- a. has a maximum GFA of 80m²;
- b. no more than 1 caretaker's accommodation⁽¹⁰⁾ is established per site;
- c. does not gain access from a separate driveway to the main use on the site;

- d. is safe for the residents;
- e. has regard to the landscape and private recreation needs of the resident.
- d. provides a minimum 16m² of private open space directly accessible from a habitable room;
- e. provides car parking in accordance with Schedule 7 Car parking.

Club (14) and Community Use (17)

PO54

Development is of a low scale and intensity that;

- a. maintains its subordinate function and nexus to the airfield and aviation activities;
- does not interfere with the operation of the airfield.

No acceptable outcome provided.

Major electricity infrastructure (43), Substation and Utility installation (86)

PO55

The development does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- c. not visually dominant or intrusive;
- d. located behind the main building line;
- e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures:
- f. camouflaged through the use of colours and materials which blend into the landscape;
- g. treated to eliminate glare and reflectivity;
- h. landscaped;
- i. otherwise consistent with the amenity and character of the zone and surrounding area.

AO55.1

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- a. are enclosed within buildings or structures;
- b. are located behind the main building line;
- c. have a similar height, bulk and scale to the surrounding fabric:
- d. have horizontal and vertical articulation applied to all exterior walls.

AO56.2

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

PO57

Infrastructure does not have an impact on pedestrian health and safety.

AO57

Access control arrangements:

- do not create dead-ends or dark alleyways adjacent to the infrastructure:
- b. minimise the number and width of crossovers and entry points;
- provide safe vehicular access to the site;
- d. do not utilise barbed wire or razor wire.

PO58

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

AO58

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

- generates no audible sound at the site boundaries where in a residential setting; or
- meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

Telecommunications facility (81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

PO59

Telecommunications facilities⁽⁸¹⁾ are co-located with existing telecommunications facilities⁽⁸¹⁾, Utility installation⁽⁸⁶⁾, Major electricity infrastructure⁽⁴³⁾ or Substation⁽⁸⁰⁾ if there is already a facility in the same coverage area.

AO59.1

New telecommunication facilities⁽⁸¹⁾ are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

AO59.2

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

PO60

A new Telecommunications facility⁽⁸¹⁾ is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

AO60

A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

PO61

Telecommunications facilities (81) do not conflict with lawful existing land uses both on and adjoining the site.

AO61

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

PO62

The Telecommunications facility⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- c. not visually dominant or intrusive;
- d. located behind the main building line;
- below the level of the predominant tree canopy or the level of the surrounding buildings and structures:
- f. camouflaged through the use of colours and materials which blend into the landscape;
- g. treated to eliminate glare and reflectivity;

AO62.1

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

AO62.2

In all other areas towers do not exceed 35m in height.

AO62.3

Towers, equipment shelters and associated structures are of a design, colour and material to:

- h. landscaped;
- otherwise consistent with the amenity and character of the zone and surrounding area.
- a. reduce recognition in the landscape;
- b. reduce glare and reflectivity.

AO62.4

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

AO62.5

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

AO62.6

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

PO63

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

A063

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.

PO64

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

AO64

All equipment comprising the Telecommunications facility⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

PO65

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
- b. protects the environmental and ecological values and health of receiving waters;
- c. protects buildings and infrastructure from the effects of acid sulfate soils.

AO65

Development does not involve:

- excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or
- b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy — Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

PO66

Development:

- minimises the number of buildings and people working and living on a site exposed to bushfire risk;
- ensures the protection of life during the passage of a fire front;
- is located and designed to increase the chance of survival of buildings and structures during a bushfire;
- d. minimises bushfire risk from build up of fuels around buildings and structures;
- e. ensure safe and effective access for emergency services during a bushfire.

A066.1

Buildings and structures are:

- a. not located on a ridgeline;
- b. not located on land with a slope greater than 15% (see Overlay map Landslide hazard);
- c. dwellings are located on east to south facing slopes.

AO66.2

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
- d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m,

a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:

- to, and around, each building and other roofed structure; and
- ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO67

Development and associated driveways and access ways:

- a. avoid potential for entrapment during a bushfire;
- b. ensure safe and effective access for emergency services during a bushfire;
- c. enable safe evacuation for occupants of a site during a bushfire.

AO67

A length of driveway:

- to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- b. has a maximum gradient no greater than 12.5%;
- c. have a minimum width of 3.5m;
- d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

PO68

Development provides an adequate water supply for fire-fighting purposes.

A068

- a. a reticulated water supply is provided by a distributer retailer for the area or;
- where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
- c. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access is provided to within 3m of that water storage source.
- d. Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - i. a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
 - ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

PO69

Development:

- does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
- b. does not present danger or difficulty to emergency services for emergency response or evacuation.

A069

Development does not involve the manufacture or storage of hazardous chemicals.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are exempt from the native vegetation clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure:
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO70

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

 the quality and integrity of the biodiversity and ecological values inherent to a High Value Area

- and a Value Offset Area is maintained and not lost or degraded;
- on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy Environmental areas*.
- * Editor's note This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No acceptable outcome provided.

PO71

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- retaining habitat trees;
- b. providing contiguous patches of habitat;
- c. provide replacement and rehabilitation planting to improve connectivity;
- d. avoiding the creation of fragmented and isolated patches of habitat;
- e. providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

Vegetation clearing and habitat protection

PO72

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No acceptable outcome provided.

PO73

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

 rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;

b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas;
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.

PO74

Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:

- a. providing contiguous patches of habitat;
- b. avoiding the creation of fragmented and isolated patches of habitat;
- c. providing wildlife movement infrastructure;
- d. providing replacement and rehabilitation planting to improve connectivity.

No acceptable outcome provided.

Vegetation clearing and soil resource stability

PO75

Development does not:

- a. result in soil erosion or land degradation;
- leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.

No acceptable outcome provided.

Vegetation clearing and water quality

PO76

Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:

- ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads;
- b. avoiding or minimising changes to landforms to maintain hydrological water flows;
- adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities.

No acceptable outcome provided.

PO77

Development minimises adverse impacts of stormwater run-off on water quality by:

- a. minimising flow velocity to reduce erosion;
- b. minimising hard surface areas;
- c. maximising the use of permeable surfaces;
- d. incorporating sediment retention devices;
- e. minimising channelled flow.

Vegetation clearing and access, edge effects and urban heat island effects **PO78** No acceptable outcome provided. Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment. **PO79** No acceptable outcome provided. Development minimises potential adverse 'edge effects' on ecological values by: а providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas; restoring, rehabilitating and increasing the size C. of existing patches of native vegetation; d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors; e. landscaping with native plants of local origin. Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow. **PO80** No acceptable outcome provided. Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by: a. pervious surfaces; providing deeply planted vegetation buffers and b. green linkage opportunities; landscaping with local native plant species to C. achieve well-shaded urban places; increasing the service extent of the urban forest d. canopy. Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets **PO81** No acceptable outcome provided. Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in

accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO82

Development will:

- not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- b. protect the fabric and setting of the heritage site, object or building;
- c. be consistent with the form, scale and style of the heritage site, object or building;
- d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
- e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
- f. retain public access where this is currently provided.

AO82

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

PO83

Demolition and removal is only considered where:

- a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or

- c. limited demolition is performed in the course of repairs, maintenance or restoration; or
- demolition is performed following a catastrophic event which substantially destroys the building or object.

PO84

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No acceptable outcome provided.

PO85

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

AO85

Development does:

- a. not result in the removal of a significant tree;
- b. not occur within 20m of a protected tree;
- c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 Pruning of Amenity Trees.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard.

PO86

Development:

- maintains the safety of people and property on a site and neighbouring sites from landslides;
- ensures the long-term stability of the site considering the full nature and end use of the development;
- c. ensures site stability during all phases of construction and development;
- minimises disturbance of natural drainage patterns of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater
- e. minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

AO86

Development does not:

- a. involve earthworks exceeding 50m³;
- b. involve cut and fill having a height greater than 600mm;
- involve any retaining wall having a height greater than 600mm:
- d. redirect or alter the existing flow of surface or groundwater.

PO87

Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

- minimising overuse of cut and fill to create single a. flat pads and benching;
- b. avoiding expanses of retaining walls, loss of trees and vegetation and interference with natural drainage systems;
- minimising any adverse visual impact on the C. landscape character;
- d. Protect the amenity of adjoining properties.

AO87

Buildings, excluding domestic outbuildings:

- are split-level, multiple-slab, pier or pole construction;
- b. are not single plane slab on ground.

PO88

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

- the long-term stability of the development site a. considering the full nature and end use of the development;
- site stability during all phases of construction b. and development;
- the development is not adversely affected by C. landslide activity originating on sloping land above the site:
- d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

AO88

Development does not involve the manufacture, handling or storage of hazardous chemicals.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

PO89

Odour sensitive development is separated from landfill sites so they are not adversely affected by odour emission or other air pollutant impacts.

AO89

The following uses are not located within a Landfill buffer:

- Caretaker's accommodation⁽¹⁰⁾: a.
- Community residence (16): b.
- Dual occupancy⁽²¹⁾; C.
- Dwelling house (22): d.
- Dwelling unit⁽²³⁾; e.
- Hospital (36):
- f.
- Rooming accommodation (69): g.
- Multiple dwelling⁽⁴⁹⁾; h.
- Non-resident workforce accommodation (52); i.
- Relocatable home park (62): j.
- Residential care facility⁽⁶⁵⁾: k.
- Resort complex⁽⁶⁶⁾; I.
- Retirement facility⁽⁶⁷⁾; m.
- Rural workers' accommodation⁽⁷¹⁾; n.
- Short-term accommodation⁽⁷⁷⁾; 0.
- Tourist park⁽⁸⁴⁾. p.

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply) Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council. **PO90** No acceptable outcome provided. Development: minimises the risk to persons from overland a. b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. **PO91** A091 No acceptable outcome provided Development: maintains the conveyance of overland flow а predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment; does not concentrate, intensify or divert overland b. flow onto an upstream, downstream or surrounding property. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow. **PO92** No acceptable outcome provided. Development does not: directly, indirectly or cumulatively cause any a. increase in overland flow velocity or level; increase the potential for flood damage from b. overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure. Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.

PO93

AO93

Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.

Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances

PO94

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

AO94

Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.

PO95

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow

AO95.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- a. Urban area Level III;
- b. Rural area N/A;
- c. Industrial area Level V;
- d. Commercial area Level V.

AO95.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

PO96

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a. a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- b. an overland flow path where it crosses more than one premises:
- c. inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided.

Additional criteria for development for a Park⁽⁵⁷⁾

PO97 AO97

Development for a Park⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- a. public benefit and enjoyment is maximised;
- b. impacts on the asset life and integrity of park structures is minimised;
- maintenance and replacement costs are minimised.

Development for a Park⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks

PO98

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- a. impact on fauna habitats;
- b. impact on wildlife corridors and connectivity;
- c. impact on stream integrity;
- impact of opportunities for revegetation and rehabilitation planting;
- e. edge effects.

AO98

Development does not occur within:

- a. 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line
- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

6.2.2.3 Utilities precinct

6.2.2.3.1 Purpose - Utilities

- 1. The Utilities precinct comprises a number of the Regions' key infrastructure facilities including, but not limited to, Lake Samsonvale (North Pine Dam), Lake Kurwongbah (Sideling Creek Dam), bulk electricity supply substations, rail lines, wastewater treatment plants, landfill sites, infrastructure provider depots and operations areas and some Council facilities. The purpose of the code will be achieved through the following overall outcomes for the Utilities precinct:
 - a. Development supports and meets the servicing needs of the community.
 - b. Development establishes in a concentrated and integrated manner to achieve efficient and effective functioning of utilities.
 - c. Development ensures the ongoing viability and operation of essential utilities.
 - d. Restrict development that may compromise or limit the ongoing operation and expansion of necessary utilities.
 - e. Adequate and sensible buffering and separation is provided between development and sensitive land uses.
 - f. Crime prevention through environmental design principles (CPTED) are incorporated into the design of buildings and structures to ensure the safety of people and property.
 - g. Development is of a scale, height and bulk that provides a high level of amenity and is sensitive to the character of the surrounding area.
 - h. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
 - i. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
 - j. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
 - k. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.

- Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.
- m. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
 - viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
 - ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
 - x. ensuring effective and efficient disaster management response and recovery capabilities;
 - xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- m. Development in the Utilities precinct includes 1 or more of the following:
 - Emergency services (25) Transport depot⁽⁸⁵⁾ - if Major electricity infrastructure (43) located on Council owned Indoor sport and recreation (38) - if in or controlled land Outdoor sport and Substation⁽⁸⁰⁾ recreation (55) - if in accordance with a Council Master Plan approved accordance with a Council under Council policy Master Plan approved Telecommunications facility⁽⁸¹⁾ under Council policy Park⁽⁵⁷⁾ Utility installation (86)

Development in the Utilities precinct does not include any of the following: n.

•	Adult store ⁽¹⁾		Function facility ⁽²⁹⁾	•	Port services ⁽⁶¹⁾
	Agricultural supplies store ⁽²⁾	•	Funeral parlour ⁽³⁰⁾	•	Relocatable home park ⁽⁶²⁾
•	Air services ⁽³⁾	•	Garden centre ⁽³¹⁾	•	Research and technology
•	Animal husbandry ⁽⁴⁾	•	Hardware and trade		industry ⁽⁶⁴⁾
•	Animal keeping ⁽⁵⁾		supplies ⁽³²⁾	•	Residential care facility ⁽⁶⁵⁾
•	Aquaculture ⁽⁶⁾	•	Health care services ⁽³³⁾		Resort complex ⁽⁶⁶⁾
•	Bar ⁽⁷⁾	•	High Impact industry ⁽³⁴⁾		Retirement facility ⁽⁶⁷⁾
•	Brothel ⁽⁸⁾	•	Home based business ⁽³⁵⁾	•	Roadside stall ⁽⁶⁸⁾
•	Bulk landscape supplies ⁽⁹⁾	•	Hospital ⁽³⁶⁾	•	Rooming accommodation (69)
•	Caretaker's	•	Hotel ⁽³⁷⁾	. \	Rural industry ⁽⁷⁰⁾
	accommodation ⁽¹⁰⁾	•	Intensive animal industry ⁽³⁹⁾		Rural workers ⁽⁷¹⁾
•	Car wash ⁽¹¹⁾	•	Intensive horticulture ⁽⁴⁰⁾	3	accommodation(71)
•	Cemetery ⁽¹²⁾	•	Landing ⁽⁴¹⁾	•	Sales office ⁽⁷²⁾
•	Child care centre ⁽¹³⁾		Low impact industry ⁽⁴²⁾	•	Service industry ⁽⁷³⁾
•	Club ⁽¹⁴⁾		Major sport, recreation and entertainment facility ⁽⁴⁴⁾	•	Service station ⁽⁷⁴⁾
•	Community care centre ⁽¹⁵⁾	•	Marine industry ⁽⁴⁵⁾	•	Shop ⁽⁷⁵⁾
•	Community residence ⁽¹⁶⁾		Market ⁽⁴⁶⁾	•	Shopping centre ⁽⁷⁶⁾
•	Community use ⁽¹⁷⁾		Medium impact industry ⁽⁴⁷⁾	•	Short-term accommodation ⁽⁷⁷⁾
	Crematorium ⁽¹⁸⁾		Motor sport facility ⁽⁴⁸⁾		Showroom ⁽⁷⁸⁾
	Cropping ⁽¹⁹⁾	•	Multiple dwelling ⁽⁴⁹⁾		Special industry ⁽⁷⁹⁾
	Detention facility ⁽²⁰⁾		Nature-based tourism ⁽⁵⁰⁾	•	Theatre ⁽⁸²⁾
•	Dual occupancy ⁽²¹⁾	•		•	
•	Dwelling house ⁽²²⁾	•	Nightclub entertainment facility ⁽⁵¹⁾	•	Tourist attraction ⁽⁸³⁾
•	Dwelling unit ⁽²³⁾	•	Non-resident workforce	•	Tourist park ⁽⁸⁴⁾
	Educational establishment ⁽²⁴⁾		accommodation ⁽⁵²⁾	•	Transport depot ⁽⁸⁵⁾ (if not located on Council or State
		•	Office ⁽⁵³⁾		owned land)
•	Environmental facility ⁽²⁶⁾	•	Outdoor sales ⁽⁵⁴⁾	•	Veterinary services ⁽⁸⁷⁾

•	Extractive industry ⁽²⁷⁾	•	Permanent plantation ⁽⁵⁹⁾	•	Warehouse ⁽⁸⁸⁾
•	Food and drink outlet ⁽²⁸⁾	•	Place of worship ⁽⁶⁰⁾	•	Wholesale nursery ⁽⁸⁹⁾
				•	Winery ⁽⁹⁰⁾

o. Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

6.2.2.3 Criteria for assessment

To determine if development is self-assessable, development must comply with the self-assessable acceptable outcomes set out in Part E, Table 6.2.2.3.1. Where development does not meet a self-assessable acceptable outcome (SAO) of the relevant criteria Part E Table 6.2.2.3.1, assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a SAO is not met, and is therefore limited to the subject matter of the SAOs that are not complied with. To remove any doubt, for those SAOs that are complied with, there is no need for assessment against the corresponding PO.

Self-assessable acceptable outcomes (SAO)	Corresponding performance outcomes (PO)

Part E - Criteria for self-assessable development - Utilities precinct

Table 6.2.2.3.1 Self-assessable development - Utilities precinct

Self-assessable acceptable outcomes				
	General criteria			
Hazardous Chemicals				
SAO1	All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.1 Hazardous Chemicals Self-Assessable Thresholds complies with Schedule 9, Table 9.0.3 Hazardous Chemicals Self-Assessable Criteria.			
SAO2	Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.2 Hazardous Chemicals Assessable Thresholds.			
Site cover				
SAO3	Site cover of all buildings and structures does not exceed 40%.			

Lighting

SAO4

Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.

Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.

Traffic matters

SAO5

On-site car parking is provided in accordance with Schedule 7 - Car parking.

Waste

SA06

Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste.

Clearing of habitat trees where not located in the Environmental areas overlay map

SA07

Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:

- a. Clearing of a habitat tree located within an approved development footprint;
- Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

Works criteria

Utilities

SAO8

Where available, the development is connected to:

a. an existing reticulated electricity supply;

- b. telecommunications and broadband;
- c. reticulated sewerage;
- d. reticulated water;
- e. constructed and dedicated road.

SA09

Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility.

Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.

SAO10

Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development.

Access

SAO11

Any new or changes to existing site access and driveways are designed and located in accordance with:

- a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or
- b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

SAO12

Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Stormwater

SAO13

Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

SA014

Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:

- a. is for urban purposes only;
- b. involves a land area greater than 2500m²;
- c. will result in 6 or more dwellings;

OR

will result in an impervious area greater than 25% of the net developable area;

Site works and construction management

SAO15

The site and any existing structures are to be maintained in a tidy and safe condition.

SAO16

Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design.

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. SAO18 All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works. SAO19 Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification. SAO20 Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

SAO21 The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

Figure - Cut and fill

SAO22 The total of all cut and fill on-site does not exceed 900mm in height.

Lot Boundaries

Batter Cut Finished surface level 900mm maximum

Note - This is site earthworks not building work.

SAO23 Filling or excavation does not result in:

- a reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
- b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

Note - Public sector entity is defined in the Sustainable Planning Act 2009.

Fire services

Note - The provisions under this heading only apply if:

- a. the development is for, or incorporates:
 - i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or

- material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.

AND

- b. none of the following exceptions apply:
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply: or
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent

SAO24

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005):

- in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
- in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix b. B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings:
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 - for outdoor sales $^{(54)}$, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales $^{(54)}$, outdoor processing and outdoor storage facilities; and
- d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.

SAO25

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- an unobstructed width of no less than 3.5m; a.
- b. an unobstructed height of no less than 4.8m;
- constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

SAO26

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

SAO27

For development that contains on-site fire hydrants external to buildings:

- those external hydrants can be seen from the vehicular entry point to the site; or a.
- a sign identifying the following is provided at the vehicular entry point to the site: b.
 - i. the overall layout of the development (to scale);
 - ii. internal road names (where used);
 - all communal facilities (where provided);
 - the reception area and on-site manager's office (where provided); iv
 - external hydrants and hydrant booster points;
 - physical constraints within the internal roadway system which would restrict access by fire vi. fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- in a form: a.
- b. of a size;
- illuminated to a level:

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sian.

SAO28

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads

Use specific criteria

Telecommunications facility⁽⁸¹⁾

Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

SAO29 A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing

development approval. **SAO31**

- Equipment shelters and associated structures are located:
- directly beside the existing equipment shelter and associated structures; а
- b. behind the main building line;
- further away from the frontage than the existing equipment shelter and associated structures; C.
- a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

SAO32

SAO30

Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.

SAO33	The facility is enclosed by security fencing or by other means to ensure public access is prohibited.
SAO34	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.
	Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.
	Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.
SAO35	All equipment comprising the telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no

Values and constraints criteria

noise from this equipment can be heard, or felt at the site boundary.

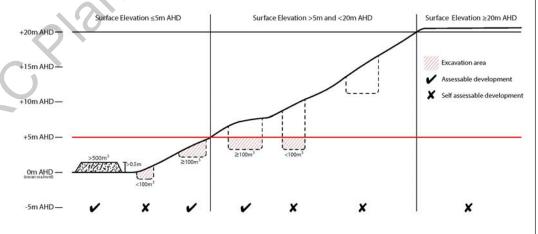

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

SAO36 Development does not involve:

- a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or
- b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m AHD.

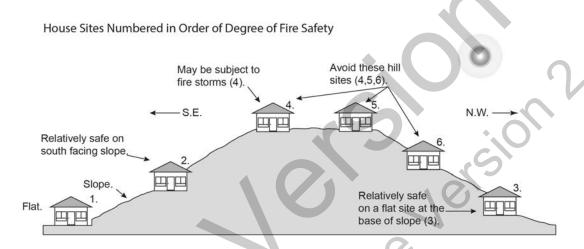

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

SAO37

- a. Building and structures are:
 - i. not located on a ridgeline
 - ii. not located on land with a slope greater than 15% (see Overlay map Landslide hazard)
- b. Dwellings are located on east to south facing slopes.

(1 being the safest, 6 being the most hazardous.)
From Bushfire Prone Areas: Siting and Design of Residential
Buildings (1997), Queensland Department of Local Government
and Planning, and Queensland Fire & Rescue Service.

SAO38

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- c. a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
- d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- e. an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - i. to, and around, each building and other roofed structure; and
 - ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959.

SAO39

The length of driveway:

- a. to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- b. has a maximum gradient no greater than 12.5%;

- c. have a minimum width of 3.5m;
- d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

SAO40

- a. A reticulated water supply is provided by a distributer retailer for the area or, where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures.
- b. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access to within 3m of that water storage source is provided.
- c. Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - i. a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;
 - ii. fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.

SAO41

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are exempt from the native clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

SAO42

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house⁽²²⁾ and all associated facilities* or an extension to an existing dwelling house⁽²²⁾ only, and comprises an area no greater than 1500m².

Note - *All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.

Editor's note - See in heading above for other uses exempt from native vegetation clearing requirements.

Editor's note - Where self-assessable vegetation clearance is being undertaken, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

- i. co-locating all associated activities, infrastructure and access strips;
- ii. be the least valued area of koala habitat on the site;
- iii. minimise the footprint of the development envelope area;
- iv. minimise edge effects to areas external to the development envelope;
- v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy Environmental areas;
- vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where self-assessable vegetation clearing is being undertaken, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

SAO43

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following assessment criteria apply)

SAO44 Development does not result in more than one dwelling house⁽²²⁾ per lot within separation areas.

SAO45 Development within the separation area does not include the following uses:

	a. caretaker's accommodation ⁽¹⁰⁾ ; b. community residence ⁽¹⁶⁾ ; c. dual occupancy ⁽²¹⁾ ; d. dwelling unit ⁽²³⁾ ; e. hospital ⁽³⁶⁾ ; f. rooming accommodation ⁽⁶⁹⁾ ; g. multiple dwelling ⁽⁴⁹⁾ ; h. non-resident workforce accommodation ⁽⁵²⁾ ; i. relocatable home park ⁽⁶²⁾ ; j. residential care facility ⁽⁶⁵⁾ ; k. resort complex ⁽⁶⁶⁾ ; l. retirement facility ⁽⁶⁷⁾ ; m. rural workers' accommodation ⁽⁷¹⁾ ; n. short-term accommodation ⁽⁷⁷⁾ ; o. tourist park ⁽⁸⁴⁾ .
SAO46	All habitable rooms within the separation area are: a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008; b. provided with mechanical ventilation.
SAO47	Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.
	ve resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) mine if the following assessment criteria apply)
SAO48	The following uses are not located within the 100m wide transport route buffer:
	a. Caretaker's accommodation ⁽¹⁰⁾ , except where located in the Extractive industry zone; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ; d. Dwelling house; ⁽²²⁾ e. Dwelling unit ⁽²³⁾ ; f. Hospital ⁽³⁶⁾ ; g. Rooming accommodation ⁽⁶⁹⁾ ; h. Multiple dwelling ⁽⁴⁹⁾ ; i. Non-resident workforce accommodation ⁽⁵²⁾ ; j. Relocatable home park ⁽⁶²⁾ ; k. Residential care facility ⁽⁶⁵⁾ ; l. Resort complex ⁽⁶⁶⁾ ; m. Retirement facility ⁽⁶⁷⁾ ; n. Rural workers' accommodation ⁽⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷⁾ ; p. Tourist park ⁽⁸⁴⁾ .
SAO49	Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.
SAO50	A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.
	and landscape character (refer Overlay map - Heritage and landscape character to determine if wing assessment criteria apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

SAO51

Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

SAO52

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

SAO53

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

SAO54

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

- a. construction of any building;
- b. laying of overhead or underground services;
- c. any sealing, paving, soil compaction;
- d. any alteration of more than 75mm to the ground level prior to work commencing.

SAO55

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

SAO56

Development does not:

- a. involve earthworks exceeding 50m³;
- b. involve cut and fill having a height greater than 600mm;
- c. involve any retaining wall having a height greater than 600mm;
- d. redirect or alter the existing flow of surface or groundwater.

SAO57

Buildings, excluding domestic outbuildings:

- a. are split-level, multiple-slab, pier or pole construction;
- b. are not single plane slab on ground.

SAO58

Development does not involve the manufacture, handling or storage of hazardous chemicals.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

SAO59

Development does not include the following uses within a Wastewater treatment site buffer:

	a. Caretaker's accommodation ⁽¹⁰⁾ ; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ; d. Dwelling house; ⁽²²⁾ e. Dwelling unit ⁽²³⁾ ; f. Hospital ⁽³⁶⁾ ; g. Rooming accommodation ⁽⁶⁹⁾ ; h. Multiple dwelling ⁽⁴⁹⁾ ; i. Non-resident workforce accommodation ⁽⁵²⁾ ; j. Relocatable home park ⁽⁶²⁾ ; k. Residential care facility ⁽⁶⁵⁾ ; l. Resort complex ⁽⁶⁶⁾ ; m. Retirement facility ⁽⁶⁷⁾ ; n. Rural workers' accommodation ⁽⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷⁾ ; p. Tourist park ⁽⁸⁴⁾ .
SAO60	Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.
SAO61	Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.
SAO62	Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things): a. buildings or structures; b. gates and fences; c. storage of equipment or materials; d. landscaping or earthworks or stormwater or other infrastructure.
SAO63	On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected.
SAO64	On-site sewerage facilities in a Water supply buffer for a dwelling house ⁽²²⁾ include: a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time; b. a reserve land application area of 100% of the effluent irrigation design area; c. land application areas that are vegetated; d. the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area); e. wastewater collection and storage systems must have capacity to accommodate full load at peak times.
SAO65	On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging.
SAO66	Development involving Permanent plantation ⁽⁵⁹⁾ within a Water supply buffer maintains a minimum of 30% ground cover at all times.
SAO67	Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer.

SAO68	Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.
SAO69	Development does not involve the construction of any buildings or structures within the Gas pipeline buffer.
SAO70	Development does not include the following uses located within a landfill site buffer: a. caretaker's accommodation ⁽¹⁰⁾ ; b. community residence ⁽¹⁶⁾ ; c. dual occupancy ⁽²¹⁾ , d. dwelling house; ⁽²²⁾ e. dwelling unit ⁽²³⁾ ; f. hospital ⁽³⁶⁾ ; g. rooming accommodation ⁽⁶⁹⁾ ; h. multiple dwelling ⁽⁴⁹⁾ ; i. non-resident workforce accommodation ⁽⁵²⁾ ; j. relocatable home park ⁽⁶²⁾ ; k. residential care facility ⁽⁶⁵⁾ ; l. resort complex ⁽⁶⁶⁾ ; m. retirement facility ⁽⁶⁷⁾ ; n. rural workers' accommodation ⁽⁷¹⁾ ; o. short term accommodation ⁽⁷⁷⁾ ; p. tourist park ⁽⁸⁴⁾ .
SA071	All habitable rooms located within an Electricity supply substation buffer are: a. located a minimum of 10m from an electricity supply substation ⁽⁸⁰⁾ ; and b. acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.
SA072	Development does not involve the construction of any buildings or structures containing habitable rooms or sensitive land uses within a High voltage electricity line buffer.
Overlan	d flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria
SA073	Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.
SA074	Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow
SAO75	Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.
SAO76	Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.
SA077	Development for a material change of use or building work for a Park ⁽⁵⁷⁾ ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following assessment criteria apply)

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

SAO78

No development is to occur within:

- a. 50m from top of bank for W1 waterway and drainage line
- b. 30m from top of bank for W2 waterway and drainage line
- c. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

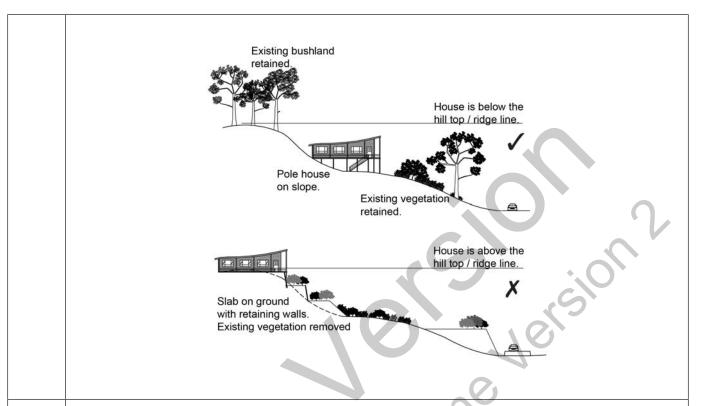

Note - The minimum setback distance applies to the each side of waterway

Scenic amenity - Regionally significant (Hills) and Locally important (Coast) - (refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)

SAO79

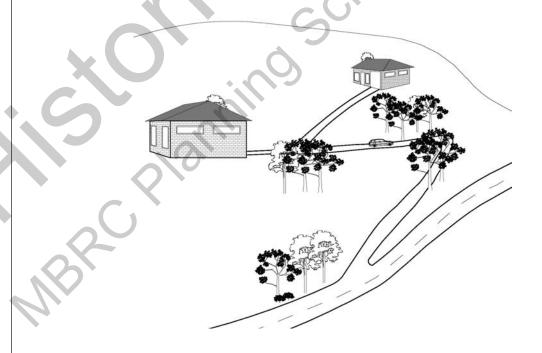

Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not:

- a. located on a hill top or ridge line; and
- b. all parts of the building and structure are located below the hill top or ridge line.

SAO80 Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

- a. go across land contours and do not cut straight up slopes;
- b. follow natural contours, not resulting in batters or retaining walls being greater than 1m in height.

SAO81 Where located in the Regionally significant (Hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:

Colours from Australian Standard AS2700s – 1996			
G12 – Holly	G53 – Banksia	N44 – Bridge Grey	
G13 – Emerald	G54 – Mist Green	N45 – Koala Grey	

Colours from Australian Standard AS2700s – 1996					
G14 – Moss Green	G55 – Lichen	N52 – Mid Grey			
G15 – Rainforest Green	G56 – Sage Green	N54 – Basalt			
G16 – Traffic Green	G62 – Rivergum	N55 – Lead Grey			
G17 – Mint Green	G64 – Slate	X54 – Brown			
G21 – Jade	G65 – Ti Tree	X61 – Wombat			
G22 – Serpentine	N25 – Birch Grey	X62 – Dark Earth			
G23 – Shamrock	N32 – Green Grey	X63 – Iron Bark			
G24 – Fern Green	N33 – Lightbox Grey	Y51 – Bronze Olive			
G25 – Olive	N35 – Light Grey	Y61 – Black Olive			
G34 – Avocado	N41 – Oyster	Y63 – Khaki			
G52 – Eucalyptus	N42 – Storm Grey	Y66 – Mudstone			
	N43 – Pipeline Grey	7			

SAO82

Where located in the Regionally significant (Hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures are painted or finished such that reflectivity is less than 35%.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part F — Criteria for assessable development - Utilities precinct

Where development is code assessable development in the Table of Assessment, the assessment criteria for that development are set out in Part F, Table 6.2.2.3.2.

Where development is impact assessable, the assessment criteria becomes the whole of the planning scheme.

Table 6.2.2.3.2 Assessable development - Utilities precinct

Performance outcomes	Acceptable outcomes
General criteria	
General	
P01	No acceptable outcome provided.
The site is sufficient in area and dimension to accommodate the use, buildings and structures as well as required buffering measures, treatments, access, parking and manoeuvring.	
PO2	No acceptable outcome provided.

Development does not hinder or constrain the ongoing operation and expansion of uses anticipated in the Utilities precinct.

Built form and design

PO₃

Buildings and structures are of a height, scale and bulk which:

- a. are consistent with the existing amenity and character:
- b. minimise the visual impact of large-scale built form;
- do not result in a significant loss of amenity.

No acceptable outcome provided

PO4

Buildings and structures are designed and constructed to:

- incorporate a mix of colours and high-quality materials to add diversification to treatments and finishes:
- avoid blank walls through façade articulation to create visual interest and deter graffiti and vandalism:
- activate and address the street, public areas and public open space;
- d. reduce cluttering of plant and equipment on building roofs.

AO4.1

Development provides materials and finishes of a high quality that are not susceptible to stain, discolour or deterioration.

AO4.2

Development incorporates articulated walls with variation, detail and colour to reduce the bulk and impact of development and minimise expansive blank walls.

AO4.3

The main facade of the building directly addresses and faces the street and contains a mix of materials and colours.

AO4.4

Building utilities such as lift motor rooms and telecommunications equipment are designed to be visually integrated with the building.

PO5

Development:

- a. maintain a balance area of the site that is open and uncluttered by building and structures;
- b. ensure that buildings and structures are not overbearing, visually dominant or out of character with the surrounding environment nor detract from the amenity of adjoining land.

AO₅

Site cover of all buildings and structures does not exceed 40%.

Building setbacks

PO6

Building setback:

- ensures impacts from the use are buffered and ameliorated;
- b. is compatible with established setbacks;
- c. is sufficient to minimise overlooking and maintain privacy of adjoining properties;
- d. is sufficient to ensure development is not visually dominant or overbearing on adjoining properties.

No acceptable outcome provided.

Personal and property safety

PO7

Buildings, structures and spaces are designed and constructed to create a safe and secure environment by incorporating key crime prevention through environmental design principles (CPTED), including:

- a. casual surveillance opportunities and sight lines;
- b. way-finding cues and signage;
- defined different uses and private and public ownership through adequate fencing and signage;
- d. light illuminates pathways and potential entrapment areas as well as maximising opportunities for penetration of natural light into spaces;
- e. minimise predictable routes and entrapment locations.

No acceptable outcome provided.

Amenity

PO8

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, light, chemicals and other environmental nuisances.

No acceptable outcome provided.

Car parking

PO9

On-site car parking associated with an activity:

 provides safe and convenient on-site parking and manuoevring to meet anticipated parking demand;

AO9

On-site car parking is provided in accordance with Schedule 7 - Car parking.

- b. does not result adverse impacts on the efficient and safe functioning of the road network;
- c. does not compromise the ongoing operation of existing or planned infrastructure and utilities.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome

Landscaping and screening

PO10

Landscaping and screening is provided in a manner that:

- a. achieves a high level of privacy and amenity to sensitive land use on adjoining properties and when viewed from the street;
- reduces the visual impact of building bulk and presence and hard surface areas on the local character and amenity of adjoining sensitive land use and from the street;
- c. creates a secure and safe environment by incorporating key elements of crime prevention through environmental design;
- d. achieves the design principles outlined in Planning scheme policy Integrated design.

No acceptable outcome provided.

Loading and servicing

PO11

Loading and servicing areas:

- a. are not visible from the street frontage;
- b. are integrated into the design of the building;
- include screening and buffers to reduce negative impacts on adjoining sensitive land uses;
- d. where possible loading and servicing areas are consolidated and shared with adjoining sites.

No acceptable outcome provided.

Waste

PO12

Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.

No acceptable outcome provided.

Noise

PO13

Noise generating uses do not adversely affect existing noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

No acceptable outcome provided.

PO14

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- b. maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

AO14.1

Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise

AO14.2

Noise attenuation structures (e.g. walls, barriers or fences):

- a. are not visible from an adjoining road or public area unless:
 - i. adjoining a motorway or rail line; or
 - ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- do not remove existing or prevent future active transport routes or connections to the street network;
- c. are located, constructed and landscaped in accordance with Planning scheme policy Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

Hazardous chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO15 AO15.1

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO17.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.

AO15.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO17.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.

AO15.3

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an

industrial land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 14kPa overpressure;
 - ii. 12.6kW/m2 heat radiation.

If criteria AO17.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.

PO16

Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

A016

Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.

PO17

Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

AO17

Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.

PO18

Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

AO18.1

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively:

- a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and
- b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

AO18.2

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

Clearing of habitat trees where not located within the Environmental areas overlay map

PO19

- Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.
- Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.
- c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

No acceptable outcome provided

Works criteria

Utilities PO20 AO20 The development is connected to an existing reticulated Development is connected to underground electricity. electricity supply system approved by the relevant energy regulating authority. PO21 No acceptable outcome provided The development has access to telecommunications and broadband services in accordance with current standards. **PO22** AO22.1 The development provides for the treatment and Where in a sewered area, the development is connected disposal of sewage and other waste water in a way that to a reticulated sewerage network. will not cause environmental harm or pose a risk to public health. AO22.2

Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility. Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code. AO22.3 Trade waste is pre-treated on-site prior to discharging into the sewerage network. **PO23** AO23.1 Where in an existing connections area or a future The development is provided with an adequate and sustainable supply of potable (drinking and general use connections area as detailed in the Unitywater e.g. gardening, washing, fire fighting) water. Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards. AO23.2 Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development. **PO24** No acceptable outcome provided The development is provided with constructed and dedicated road access. Access **PO25** No acceptable outcome provided Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design. **PO26** AO26.1 The layout of the development does not compromise: The development provides for the extension of the road network in the area in accordance with Council's road the development of the road network in the area; a. network planning. b. the function or safety of the road network; the capacity of the road network. C. AO26.2

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.

AO26.3

The lot layout allows forward access to and from the site.

PO27

Safe access is provided for all vehicles required to access the site.

AO27.1

Site access and driveways are designed and located in accordance with:

- a. Where for a Council-controlled road, AS/NZS2890.1 section 3: or
- Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

AO27.2

Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.

AO27.3

Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.

PO28

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- b. ensure the orderly and efficient continuation of the active transport network;
- c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared

No acceptable outcome provided

in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

- Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or
- ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

Stormwater

PO29

Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.

No acceptable outcome provided

PO30

Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

No acceptable outcome provided

PO31

Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP.

Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

No acceptable outcome provided

PO32

Easements for drainage purposes are provided over:

- a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;
- b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided

Site works and construction management

PO33

The site and any existing structures are maintained in a tidy and safe condition.

No acceptable outcome provided

PO34

All works on-site are managed to:

- minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- b. minimise as far as possible, impacts on the natural environment:
- ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises;
- d. avoid adverse impacts on street trees and their critical root zone.

AO34.1

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions:
- b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion;
- stormwater discharge rates do not exceed pre-existing conditions;
- d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and
- e. the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins.

AO34.2

Stormwater runoff, erosion and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

AO34.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

PO35

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

No acceptable outcome provided

PO36

All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

Note - Where the amount of imported or exported material is greater than 50m3, a haulage route must be identified and approved by

AO36.1

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

AO36.2

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

AO36.3

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

PO37

All disturbed areas are rehabilitated at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

AO37

At completion of construction all disturbed areas of the site are to be:

- topsoiled with a minimum compacted thickness of fifty (50) millimetres;
- b. grassed.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

PO38

The clearing of vegetation on-site:

- is limited to the area of infrastructure works, building areas and other necessary areas for the works: and
- b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;
- is disposed of in a manner which minimises C. nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

AO38

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.

PO39

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

No acceptable outcome provided

Earthworks

PO40

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- a. the natural topographical features of the site;
- short and long-term slope stability; b.
- soft or compressible foundation soils: C.
- reactive soils: d.
- low density or potentially collapsing soils; e.
- existing fill and soil contamination that may exist f. on-site:
- the stability and maintenance of steep rock slopes g. and batters:
- excavation (cut) and fill and impacts on the h. amenity of adjoining lots (e.g. residential).

Note - Filling or excavation works are to be completed within six months of the commencement date.

AO40.1

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

AO40.2

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

AO40.3

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

AO40.4

All filling or excavation is contained on-site.

AO40.5

All fill placed on-site is:

- limited to that required for the necessary approved
- clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

AO40.6

The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

AO40.7

Materials used for structural fill are in accordance with AS3798.

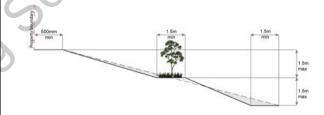

PO41

Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

AO41

Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Figure - Embankment

PO42

Filling or excavation is undertaken in a manner that:

- does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;
- does not preclude reasonable access to a Council b. or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO42.1

No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO42.2

Filling or excavation that would result in any of the following is not carried out on-site:

- a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;
- b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

PO43

Filling or excavation does not result in land instability.

Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

No acceptable outcome provided

PO44

Development does not result in

- adverse impacts on the hydrological and hydraulic a. capacity of the waterway or floodway;
- b. increased flood inundation outside the site;
- any reduction in the flood storage capacity in the C. floodway;
- d. and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

No acceptable outcome provided.

Retaining walls and structures

PO45

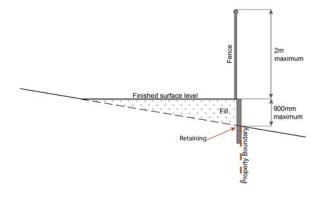

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

AO45

Earth retaining structures:

- are not constructed of boulder rocks or timber;
- b. where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary;

Figure - Retaining on boundary

where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent

- height of the retaining structure from any property boundary;
- where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal, terraced, landscaped and drained as shown below.

Figure - Cut

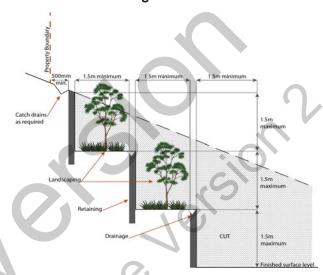

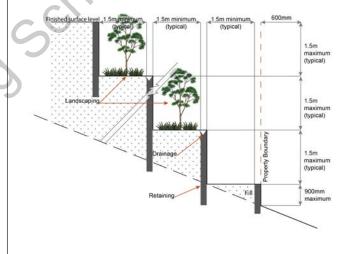

Figure - Fill

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials. ii.
 - iii.

AND

b. none of the following exceptions apply:

- the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
- every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO46

Development incorporates a fire fighting system that:

- a. satisfies the reasonable needs of the fire fighting entity for the area;
- is appropriate for the size, shape and topography b. of the development and its surrounds;
- is compatible with the operational equipment C. available to the fire fighting entity for the area;
- d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another:
- e. considers the fire hazard inherent in the surrounds to the development site:
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

AO46.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

- in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative:
- in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only
 - extend to the roof of those tents and caravans; for outdoor sales ⁽⁵⁴⁾, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;
- d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

AO46.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- an unobstructed width of no less than 3.5m; a.
- an unobstructed height of no less than 4.8m; b.
- constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO46.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) - Routine service of fire protection systems and equipment.

PO47

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development

AO47

For development that contains on-site fire hydrants external to buildings:

- those external hydrants can be seen from the vehicular entry point to the site; or
- a sign identifying the following is provided at the vehicular entry point to the site:
 - the overall layout of the development (to scale);
 - internal road names (where used); ii.
 - all communal facilities (where provided);
 - the reception area and on-site manager's office (where provided);
 - external hydrants and hydrant booster points;
 - physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- in a form: а
- b. of a size:
- illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the

PO48

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

AO48

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note *Fire hydrant* indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific criteria

Major electricity infrastructure⁽⁴³⁾, Substation⁽⁸⁰⁾ and Utility installation⁽⁸⁶⁾

PO49

The development does not have an adverse impact on the visual amenity of a locality and is:

- high quality design and construction; a.
- b. visually integrated with the surrounding area:
- C. not visually dominant or intrusive;
- d. located behind the main building line;
- below the level of the predominant tree canopy or e. the level of the surrounding buildings and structures:
- f. camouflaged through the use of colours and materials which blend into the landscape;
- treated to eliminate glare and reflectivity; g.
- h. landscaped;
- i. otherwise consistent with the amenity and character of the zone and surrounding area.

AO49.1

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- are enclosed within buildings or structures;
- are located behind the main building line; b.
- have a similar height, bulk and scale to the C. surrounding fabric;
- d. have horizontal and vertical articulation applied to all exterior walls.

AO49.2

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

PO50

Infrastructure does not have an impact on pedestrian health and safety.

AO50

Access control arrangements:

- do not create dead-ends or dark alleyways adjacent to the infrastructure;
- minimise the number and width of crossovers and entry points;
- provide safe vehicular access to the site;
- d. do not utilise barbed wire or razor wire.

PO51

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

- generates no audible sound at the site boundaries a. where in a residential setting; or
- b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

AO51

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

Telecommunications facility (81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

PO52

AO52.1

New telecommunication facilities (81) are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

Telecommunications facilities⁽⁸¹⁾ are co-located with existing telecommunications facilities⁽⁸¹⁾, Utility installation⁽⁸⁶⁾, Major electricity infrastructure⁽⁴³⁾ or Substation⁽⁸⁰⁾ if there is already a facility in the same coverage area.

AO52.2

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

PO53

A new Telecommunications facility (81) is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

AO53

A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

PO54

Telecommunications facilities⁽⁸¹⁾ do not conflict with lawful existing land uses both on and adjoining the site.

AO54

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

PO55

The Telecommunications facility (81) does not have an adverse impact on the visual amenity of a locality and is:

- high quality design and construction; a.
- visually integrated with the surrounding area; b.
- not visually dominant or intrusive; C.
- located behind the main building line; d.
- below the level of the predominant tree canopy or the level of the surrounding buildings and structures;
- camouflaged through the use of colours and materials which blend into the landscape;
- treated to eliminate glare and reflectivity; g.
- landscaped;
- otherwise consistent with the amenity and character of the zone and surrounding area.

AO55.1

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

AO55.2

In all other areas towers do not exceed 35m in height.

AO55.3

Towers, equipment shelters and associated structures are of a design, colour and material to:

- reduce recognition in the landscape;
- b. reduce glare and reflectivity.

AO55.4

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

AO55.5

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

AO55.6

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

PO56

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

AO56

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.

PO57

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

AO57

All equipment comprising the Telecommunications facility (81) which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Transport depot (85)

PO58

Development is located on a site of sufficient size to ensure:

- the scale and intensity of the development does a. not result in adverse visual or nuisance impacts on the residents in adjoining or nearby dwellings;
- vehicular and pedestrian traffic generation b. consistent with that reasonably expected in the surrounding locality.

AO58.1

Development, including all vehicle parking, drive way areas and storage areas, is set back 30m from all property boundaries.

AO58.2

The maximum number of heavy vehicles, trailers and motor vehicles stored on-site is as follows:

- 4 heavy vehicles a.
- b. 4 trailers
- 6 motor vehicles.

PO59

Development is suitably screened to ensure adverse visual impacts on the residents in adjoining or nearby dwellings are minimised.

AO59

Vehicle parking areas, vehicle standing areas and outdoor storage areas of plant and equipment are screened from adjoining sites by either planting, wall(s), fence(s) or a combination to at least 1.8m in height along the length of those areas.

Planting for screening is to have a minimum depth of 3m.

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

PO60

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment;
- protects the environmental and ecological values and health of receiving waters;
- protects buildings and infrastructure from the effects of acid sulfate soils.

AO60

Development does not involve:

- excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or
- filling of land of more than 500m3 of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy – Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

PO61

Development:

- minimises the number of buildings and people working and living on a site exposed to bushfire
- ensures the protection of life during the passage b. of a fire front:
- is located and designed to increase the chance of C. survival of buildings and structures during a
- minimises bushfire risk from build up of fuels d. around buildings and structures;
- ensure safe and effective access for emergency e. services during a bushfire.

AO61.1

Buildings and structures are:

- not located on a ridgeline;
- not located on land with a slope greater than 15% b. (see Overlay map - Landslide hazard);
- dwellings are located on east to south facing slopes.

AO61.2

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the
- a separation from low threat vegetation of 10m or h the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;

- a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures:
- an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- an access path suitable for use by a standard fire e. fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - to, and around, each building and other roofed structure; and
 - to each fire fighting water supply extraction ii. point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO62

Development and associated driveways and access ways:

- avoid potential for entrapment during a bushfire; a.
- ensure safe and effective access for emergency b. services during a bushfire;
- enable safe evacuation for occupants of a site C. during a bushfire.

A062

A length of driveway:

- to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- has a maximum gradient no greater than 12.5%;
- c. have a minimum width of 3.5m;
- accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

PO63

Development provides an adequate water supply for fire-fighting purposes.

AO63

- a reticulated water supply is provided by a distributer retailer for the area or:
- where not connected to a reticulated water supply. on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
- Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access is provided to within 3m of that water storage source.
- d. Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
 - fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

PO64

Development:

- does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
- does not present danger or difficulty to emergency b. services for emergency response or evacuation.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

AO64

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are exempt from the native vegetation clearing provisions of this planning scheme.

- Clearing of native vegetation located within an approved development footprint; a.
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately b. required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage C. to infrastructure;
- Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width d. either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public e. infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping g. land, windbreaks, lawns or created gardens;
- Grazing of native pasture by stock; h
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO65

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- on-site mitigation measures, mechanisms or b. processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*.

* Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014,

No acceptable outcome provided.

PO66

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- retaining habitat trees; a.
- b. providing contiguous patches of habitat;
- provide replacement and rehabilitation planting to improve connectivity;
- avoiding the creation of fragmented and isolated d. patches of habitat;
- providing wildlife movement infrastructure.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas.

No acceptable outcome provided.

Vegetation clearing and habitat protection

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No acceptable outcome provided.

PO68

PO67

No acceptable outcome provided.

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will: rehabilitate, revegetate, restore and enhance an a. area to ensure it continues to function as a viable and healthy habitat area; b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; C. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework. **PO69** No acceptable outcome provided. Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by: providing contiguous patches of habitat; avoiding the creation of fragmented and isolated b. patches of habitat; providing wildlife movement infrastructure; C. providing replacement and rehabilitation planting to improve connectivity. Vegetation clearing and soil resource stability **PO70** No acceptable outcome provided. Development does not: result in soil erosion or land degradation; a. b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner. Vegetation clearing and water quality P071 No acceptable outcome provided. Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by: ensuring an effective vegetated buffers and a. setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads: avoiding or minimising changes to landforms to b. maintain hydrological water flows; adopting suitable measures to exclude livestock C. from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities. **PO72** No acceptable outcome provided.

Development minimises adverse impacts of stormwater run-off on water quality by:

- minimising flow velocity to reduce erosion; a.
- b. minimising hard surface areas;
- C. maximising the use of permeable surfaces;
- d. incorporating sediment retention devices;
- minimising channelled flow. e.

Vegetation clearing and access, edge effects and urban heat island effects

PO73

Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

No acceptable outcome provided.

PO74

Development minimises potential adverse 'edge effects' on ecological values by:

- providing dense planting buffers of native а vegetation between a development and environmental areas:
- b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- restoring, rehabilitating and increasing the size of C. existing patches of native vegetation;
- d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- e. landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

No acceptable outcome provided.

PO75

Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- a. pervious surfaces:
- providing deeply planted vegetation buffers and b. green linkage opportunities;
- landscaping with local native plant species to C. achieve well-shaded urban places;
- d. increasing the service extent of the urban forest

No acceptable outcome provided.

Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

PO76

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.

No acceptable outcome provided.

Extractive resources separation area (refer Overlay map - Extractive resources (separation area) to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing noise impact assessment report is provided in Planning scheme policy - Noise.

PO77

Development does not increase the number of people living in the Extractive Resources separation area.

A077

One dwelling house⁽²²⁾ permitted per lot within separation area.

PO78

Development:

- does not introduce or increase uses that are sensitive to the impacts of an Extractive industry⁽²⁷⁾;
- is compatible with the operation of an Extractive industry⁽²⁷⁾; b.
- does not comprise or undermine the function and C. integrity of the separation area in providing a buffer between key extractive and processing activities and sensitive, incompatible uses outside the separation area.

AO78

Development within the separation area does not include the following activities:

- Caretaker's accommodation⁽¹⁰⁾; a.
- Community residence (16); b.
- Dual occupancy⁽²¹⁾; C.
- d. Dwelling unit⁽²³⁾;
- Hospital (36): e.
- Rooming accommodation (69): f.
- Multiple dwelling⁽⁴⁹⁾; g.
- Non-resident workforce accommodation (52); h.
- Relocatable home park⁽⁶²⁾: i.
- Residential care facility⁽⁶⁵⁾: j.
- Resort complex⁽⁶⁶⁾; k.
- Retirement facility⁽⁶⁷⁾; I.
- Rural workers' accommodation⁽⁷¹⁾; m.
- Short-term accommodation⁽⁷⁷⁾; n.
- Tourist park (84). Ο.

PO79

Habitable rooms achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

AO79

All habitable rooms within the separation area are:

- acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;
- b. provided with mechanical ventilation.

PO80

AO80

Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

Development provides open space areas for passive recreation in a manner where impacts from key extractive/processing activities, particularly noise, is minimised.

Extractive resources transport route (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

PO81

Development:

- a. does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route;
- b. does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
- adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
 - i. locating the furthest distance possible from the transportation route;
 - habitable rooms being located the furthest ii. from the transportation route;
 - iii. shielding and screening private outdoor recreation space from the transportation routes.

AO81

The following uses are not located within the 100m wide transport route buffer:

- Caretaker's accommodation (10), except where a. located in the Extractive industry zone:
- Community residence (16); b.
- Dual occupancy (21); C.
- Dwelling house⁽²²⁾; d.
- Dwelling unit⁽²³⁾; e.
- Hospital (36): f.
- Rooming accommodation (69) g.
- Multiple dwelling (49); h.
- Non-resident workforce accommodation (52);
- Relocatable home park (62); j.
- Residential care facility (65): k.
- Resort complex⁽⁶⁶⁾; I.
- Retirement facility⁽⁶⁷⁾; m.
- Rural workers' accommodation⁽⁷¹⁾;
- Short-term accommodation⁽⁷⁷⁾;
- p. Tourist park⁽⁸⁴⁾.

PO82

Development:

- does not adversely impact upon the efficient and a. effective transportation of extractive material along a transportation route;
- b. ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility:
- utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

AO82.1

Development does not create a new vehicle access point onto an Extractive resources transport route.

AO82.2

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy -Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy - Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO83

Development will:

- not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- protect the fabric and setting of the heritage site. object or building;
- be consistent with the form, scale and style of the heritage site, object or building;
- d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
- e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
- f. retain public access where this is currently provided.

AO83

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

PO84

Demolition and removal is only considered where:

- a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
- limited demolition is performed in the course of C. repairs, maintenance or restoration; or
- demolition is performed following a catastrophic d. event which substantially destroys the building or object.

No acceptable outcome provided.

PO85

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No acceptable outcome provided.

PO86

AO86

Development does:

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

- not result in the removal of a significant tree;
- not occur within 20m of a protected tree: b.
- involve pruning of a tree in accordance with C. Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy - Landslide hazard.

PO87

Development:

- maintains the safety of people and property on a site and neighbouring sites from landslides;
- ensures the long-term stability of the site b. considering the full nature and end use of the development:
- ensures site stability during all phases of C. construction and development;
- minimises disturbance of natural drainage patterns d. of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater
- minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

A087

Development does not:

- involve earthworks exceeding 50m³;
- b. involve cut and fill having a height greater than 600mm;
- involve any retaining wall having a height greater than 600mm:
- d. redirect or alter the existing flow of surface or groundwater.

PO88

Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

- minimising overuse of cut and fill to create single a. flat pads and benching;
- avoiding expanses of retaining walls, loss of trees b. and vegetation and interference with natural drainage systems;
- minimising any adverse visual impact on the C. landscape character:
- d. Protect the amenity of adjoining properties.

A088

Buildings, excluding domestic outbuildings:

- are split-level, multiple-slab, pier or pole construction; a.
- are not single plane slab on ground. b.

PO89

AO89

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

- the long-term stability of the development site a. considering the full nature and end use of the development;
- b. site stability during all phases of construction and development;
- the development is not adversely affected by C. landslide activity originating on sloping land above the site;
- d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

Development does not involve the manufacture, handling or storage of hazardous chemicals.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

PO90

Odour sensitive development is separated from Wastewater treatment plants so they are not adversely affected by odour emission or other air pollutant impacts.

A090

The following uses are not located within a wastewater treatment site buffer:

- Caretaker's accommodation⁽¹⁰⁾; a.
- Community residence (16); b.
- Dual occupancy⁽²¹⁾; C.
- Dwelling house (22) d.
- Dwelling unit⁽²³⁾; e.
- Hospital (36):
- Rooming accommodation (69); g.
- Multiple dwelling⁽⁴⁹⁾; h.
- Non-resident workforce accommodation (52);
- Relocatable home park (62); j.
- Residential care facility⁽⁶⁵⁾; k.
- Resort complex⁽⁶⁶⁾: I.
- Retirement facility (67); m.
- Rural workers' accommodation⁽⁷¹⁾: n.
- Short-term accommodation⁽⁷⁷⁾: Ο.
- Tourist park⁽⁸⁴⁾. p.

PO91

Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.

AO91.1

Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous.

AO91.2

Incineration or burial of waste within a Water supply buffer is not undertaken onsite.

AO91.3

Solid waste within a Water supply buffer is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

AO91.4

Holding tanks within a Water supply buffer are used for all liquid waste and provide for the separation of oils/solvents and solids prior to pump-out and collection by a licenced contractor.

AO91.5

Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

PO92

On-site sewerage systems within a Water supply buffer are designed and operated to ensure there is no worsening or adverse impacts to health risks, environmental risks and water quality.

Editor's Note - For guidance refer to the Seq water Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

A092

Secondary treated wastewater treatment systems within a Water supply buffer include:

- emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging;
- back up pump installation and backup power;
- MEDLI modelling to determine irrigation rates and sizing of irrigation areas;
- vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and
- wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities.

PO93

Development within a Bulk water supply infrastructure buffer is located, designed and constructed to:

- protect the integrity of the water supply pipeline; a.
- h. maintain adequate access for any required maintenance or upgrading work to the water supply pipeline;

AO93

Development:

- does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer:
- involving a major hazard facility or environmentally relevant activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.

PO94

Development is located and designed to maintain required access to Bulk water supply infrastructure.

AO94

Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):

- a. buildings or structures;
- b. gates and fences:
- storage of equipment or materials; C.
- d. landscaping or earthworks or stormwater or other infrastructure.

PO95

Odour sensitive development is separated from landfill sites so they are not adversely affected by odour emission or other air pollutant impacts.

AO95

The following uses are not located within a Landfill buffer:

- Caretaker's accommodation (10):
- Community residence (16) b.
- Dual occupancy⁽²¹⁾; C.
- Dwelling house⁽²²⁾: d.
- Dwelling unit (23); e.
- Hospital⁽³⁶⁾ f.
- Rooming accommodation (69) g.
- Multiple dwelling⁽⁴⁹⁾;
- Non-resident workforce accommodation (52);
- Relocatable home park (62);
- Residential care facility (65);
- Resort complex⁽⁶⁶⁾:
- Retirement facility (67);
- Rural workers' accommodation⁽⁷¹⁾;
- Short-term accommodation⁽⁷⁷⁾; Tourist park⁽⁸⁴⁾. ο.
- p.

PO96

Habitable rooms within an Electricity supply substation buffer are located a sufficient distance from substations (80) to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields.

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

A096

Habitable rooms:

- are not located within an Electricity supply substation buffer; and
- proposed on a site subject to an Electricity supply supply substation (80) are acoustically insulted to b. achieve the noise levels listed in Schedule 1. Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

PO97

Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation (80) to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.

Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy - Noise.

Note - Habitable room is defined in the Building Code of Australia (Volume 1)

No acceptable outcome provided.

PO98

Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development:

- is located and designed to avoid any potential a. adverse impacts on personal health and wellbeing from electromagnetic fields in accordance with the principle of prudent avoidance;
- is located and designed in a manner that maintains b. a high level of security of supply;
- is located and design so not to impede upon the functioning and maintenance of high voltage electrical infrastructure.

AO98

Development does not involve the construction of any buildings or structures within a High voltage electricity line buffer.

PO99

Development within a Pumping station buffer is located, designed and constructed to:

- ensure that odour or other air pollutant impacts on a. the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008;
- ensure that noise impacts on the amenity of the b. development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.

A099

Development does not involve the construction of any buildings or structures within a Pumping station buffer.

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

PO100

Development:

- minimises the risk to persons from overland flow;
- does not increase the potential for damage from b. overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure.

No acceptable outcome provided.

PO101

Development:

- maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;
- does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.

AO101

No acceptable outcome provided.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow.

PO102

Development does not:

- a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level;
- increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.

Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.

No acceptable outcome provided.

PO103

Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.

AO103

Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.

PO104

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

AO104

Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.

PO105

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow

AO105.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- Urban area Level III; a.
- b. Rural area – N/A;
- Industrial area Level V; C.
- Commercial area Level V.

AO105.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

PO106

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a stormwater pipe if the nominal pipe diameter a. exceeds 300mm:
- an overland flow path where it crosses more than b. one premises;
- C. inter-allotment drainage infrastructure.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided.

Additional criteria for development for a Park (57)

PO107

Development for a Park⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- public benefit and enjoyment is maximised; a.
- impacts on the asset life and integrity of park structures is minimised;
- maintenance and replacement costs are minimised.

AO107

Development for a Park⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks

PO108

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- a. impact on fauna habitats;
- impact on wildlife corridors and connectivity; b.

AO108

Development does not occur within:

- 50m from top of bank for W1 waterway and drainage
- b. 30m from top of bank for W2 waterway and drainage line

- C. impact on stream integrity;
- d. impact of opportunities for revegetation and rehabilitation planting;
- edge effects. e.

- C. 20m from top of bank for W3 waterway and drainage line
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps - Riparian and wetland setbacks.

Scenic amenity - Regionally significant (Hills) and Locally important (Coast) (refer Overlay map - Scenic amenity to determine if the following assessment criteria apply)

PO109

Development:

- avoids being viewed as a visually conspicuous a. built form on a hill top or ridgeline;
- retain the natural character or bushland settings b. as the dominant landscape characteristic:
- C. is viewed as being visually consistent with the natural landscape setting and does not diminish the scenic and visual qualities present in the environment.

AO109

Where located in the Regionally significant (Hills) scenic amenity overlay, buildings and structures are not:

- located on a hill top or ridge line;
- all parts of the building and structure are located b. below the hill top or ridge line.

PO110

Development:

- does not adversely detract or degrade the quality of views, vista or key landmarks;
- retains the natural character or bushland settings as the dominant landscape characteristic.

AO110

Where located in the Regionally significant (Hills) scenic amenity overlay, driveways and accessways:

- go across land contours, and do not cut straight up slopes;
- b. follow natural contours, not resulting in batters or retaining walls being greater than 900mm in height.

PO111

Buildings and structures incorporate colours and finishes that:

- are consistent with a natural, open space character a. and bushland environment;
- do not produce glare or appear visual incompatible b. with the surrounding natural character and bushland environment;
- are not visually dominant or detract from the C. natural qualities of the landscape.

A0111.1

Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures adopt the following colours:

Colours from Australian Standard AS2700s – 1996			
G12 – Holly	G54 – Mist Green	N 44 – Bridge Grey	
G13 – Emerald	G55 – Lichen	N45 – Koala Grey	
G14 – Moss Green	G56 – Sage Green	N52 – Mid Grey	
G15 – Rainforest Green	G62 – Rivergum	N54 – Basalt	
G16 – Traffic Green	G64 – Slate	N55 – Lead Grey	
G17 – Mint Green	G65 – Ti Tree	X54 – Brown	
G21 – Jade	N25 – Birch Grey	X61 – Wombat	
G22 – Serpentine	N32 – Green Grey	X62 – Dark Earth	

G23 – Shamrock	N33 – Lightbox Grey	X63 – Iron Bark
G24 – Fern Green	N35 – Light Grey	Y51 – Bronze Olive
G25 – Olive	N41 – Oyster	Y61 – Black Olive
G34 – Avocado	N42 – Storm Grey	Y63 – Khaki
G52 – Eucalyptus	N43 – Pipeline Grey	Y66 – Mudstone
G53 – Banksia		

AO111.2

Where located in the Regionally significant (hills) scenic amenity overlay, roofs and wall surfaces of buildings and structures are painted or finished such that reflectivity is less than 35%.

PO112

Landscaping

- complements the coastal landscape character and a.
- b. has known resilience and robustness in the coastal environment:

Fences and walls:

- do not appear visually dominant or conspicuous within its setting;
- reduce visual appearance through the use of built form articulation, setbacks, and plant screening;
- use materials and colours that are complementary to the coastal environment.

Building design responds to the bayside location and complements the particular bayside character and amenity by adopting and incorporating a range of architectural character elements.

- a. retained;
- b. protected from development diminishing their significance.

A0112

Where located in the Locally Important (Coast) scenic amenity overlay:

- landscaping comprises indigenous coastal species; a.
- b. fences and walls are no higher than 1m; and
- existing pine trees, palm trees, mature fig and cotton C. trees are retained.
- where over 12m in height, the building design includes the following architectural character elements:
 - curving balcony edges and walls, strong vertical blades and wall planes;
 - balcony roofs, wall articulation expressed with different colours, curves in plan and section, and window awnings;
 - iii. roof top outlooks, tensile structures as shading devices:
 - lightweight structures use white frame elements in steel and timber, bold colour contrast.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

6.2.2.4 Lakeside precinct

6.2.2.4.1 Purpose – Lakeside precinct

- The purpose of the code will be achieved through the following overall outcomes for the Lakeside precinct:
 - Development supports, and has a nexus with, the continued operation of the established motor sport a. facility⁽⁴⁸⁾ whilst minimising nuisance impacts and managing unreasonable amenity impacts on the surrounding sensitive land uses, wildlife and natural environment.
 - Development does not compromise, depart or detract from the primary role of the precinct, that being for a motor sport facility⁽⁴⁸⁾ use. Where development is not for a motor sport facility⁽⁴⁸⁾ use, uses consistent with the Rural Zone (see Part 6.2.10.2.3(s)) are anticipated to establish.
 - Development is designed and operated to provide a high level of amenity and maintains the safety of people and property through crime prevention through environmental design principles (CPTED).
 - Development is of a scale, height and built form consistent with the low density, low intensity character of d. the surrounding rural and open space and recreation area.
 - Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
 - f. Where applicable, development is undertaken in accordance with an approved Council Master Plan.
 - Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.
 - General works associated with the development achieves the following: h.
 - new development is provided with a high standard of services to meet and support the current and i. future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - maintain or improve the structure and condition of drainage lines and riparian areas;
 - avoid off-site adverse impacts from stormwater.
 - the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - the development ensures the safety, efficiency and useability of access ways and parking areas; ίV.
 - site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
 - Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - adopting a 'least risk, least impact' approach when designing, siting and locating development in any i. area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, iv. aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:

- the provision of replacement, restoration, rehabilitation planting and landscaping; Α.
- the location, design and management of development to avoid or minimise adverse impacts on B. ecological systems and processes;
- C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
- protecting native species and protecting and enhancing species habitat;
- protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
- establishing effective separation distances, buffers and mitigation measures associated with identified vii. infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
- establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation viii. and significant fauna habitat;
- ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
- ensuring effective and efficient disaster management response and recovery capabilities; Χ.
- where located in an overland flow path:
 - development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - development is resilient to the impacts of overland flow by ensuring the siting and design accounts B. for the potential risks to property associated with the overland flow;
 - development does not impact on the conveyance of the overland flow for any event up to and C. including the 1% AEP for the fully developed upstream catchment;
 - development directly, indirectly and cumulatively avoid an increase in the severity of overland D. flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- Development in the Lakeside precinct includes one or more of the following: į.

•	Caretaker's accommodation ⁽¹⁰⁾	Ó	Market*(46)	•	Tourist attraction*
•	Club* (14)		Motor sport facility ⁽⁴⁸⁾		Tourist park* (84)
;(Function facility* (29)	•	Outdoor sport and recreation* (55)		Tourist park
•	Indoor sport and recreation*(38)		1001041011		

Note - Uses indicated with an * are appropriate if located on Council owned or controlled land and in accordance with an approved Council Master Plan.

Development in the Lakeside precinct does not include any of the following:

.//	Adult store ⁽¹⁾	•	Funeral parlour ⁽³⁰⁾	•	Renewable energy facility ⁽⁶³⁾
1	Agricultural supplies store ⁽²⁾	•	Garden centre ⁽³¹⁾		,
•	Air services ⁽³⁾	•	Hardware and trade supplies ⁽³²⁾	•	Research and technology industry ⁽⁶⁴⁾
•	Animal husbandry ⁽⁴⁾	•	Health care services ⁽³³⁾	•	Residential care facility ⁽⁶⁵⁾
•	Animal keeping ⁽⁵⁾				
•	Aquaculture ⁽⁶⁾	•	High Impact industry ⁽³⁴⁾	•	Resort complex ⁽⁶⁶⁾
	Bar ⁽⁷⁾	•	Home based business ⁽³⁵⁾	•	Retirement facility ⁽⁶⁷⁾
	Dai	•	Hospital ⁽³⁶⁾	•	Roadside stall ⁽⁶⁸⁾

•	Brothel ⁽⁸⁾	•	Hotel ⁽³⁷⁾	•	Rooming accommodation ⁽⁶⁹⁾
•	Bulk landscape supplies ⁽⁹⁾	•	Intensive animal industry ⁽³⁹⁾	•	Rural industry ⁽⁷⁰⁾
•	Car wash ⁽¹¹⁾	•	Intensive horticulture ⁽⁴⁰⁾		
•	Cemetery ⁽¹²⁾	•	Landing ⁽⁴¹⁾	•	Rural workers' accommodation ⁽⁷¹⁾
•	Child care centre ⁽¹³⁾	•	Low impact industry ⁽⁴²⁾	• •	Sales office ⁽⁷²⁾
•	Community care centre ⁽¹⁵⁾	•	Marine industry ⁽⁴⁵⁾	0	Service industry ⁽⁷³⁾
•	Community residence ⁽¹⁶⁾	•	Medium impact industry ⁽⁴⁷⁾	•	Service station ⁽⁷⁴⁾
•	Community use ⁽¹⁷⁾	•	Multiple dwelling ⁽⁴⁹⁾	•	Shop ⁽⁷⁵⁾
•	Crematorium ⁽¹⁸⁾	•	Nature-based tourism ⁽⁵⁰⁾	•	Shopping centre ⁽⁷⁶⁾
•	Cropping ⁽¹⁹⁾	•	Nightclub entertainment facility ⁽⁵¹⁾	•	Showroom ⁽⁷⁸⁾
•	Detention facility ⁽²⁰⁾			•\	Special industry ⁽⁷⁹⁾
•	Dual occupancy ⁽²¹⁾	./	Non-resident workforce accommodation ⁽⁵²⁾	.7	Theatre ⁽⁸²⁾
•	Dwelling house ⁽²²⁾	•	Office ⁽⁵³⁾	•	Transport depot ⁽⁸⁵⁾
•	Dwelling unit ⁽²³⁾		Outdoor sales ⁽⁵⁴⁾	•	Veterinary services ⁽⁸⁷⁾
•	Educational establishment ⁽²⁴⁾		Parking station ⁽⁵⁸⁾	•	Warehouse ⁽⁸⁸⁾
	Emergency services ⁽²⁵⁾	•	Permanent plantation ⁽⁵⁹⁾	•	Wholesale nursery ⁽⁸⁹⁾
		•	Place of worship ⁽⁶⁰⁾	•	Winery ⁽⁹⁰⁾
•	Environmental facility ⁽²⁶⁾	• .	Port services ⁽⁶¹⁾		
•	Extractive industry ⁽²⁷⁾		Relocatable home park ⁽⁶²⁾		
	Food and drink outlet (128) (if including a drive-through facility)				

Development not listed in the tables above may be considered on its merits and where it reflects and supports the outcomes of the zone.

6.2.2.3 Criteria for assessment

To determine if development is self-assessable, development must comply with the self-assessable acceptable outcomes set out in Part G, Table 6.2.2.4.1. Where development does not meet an acceptable outcome (SAO) of the relevant criteria Part G Table 6.2.2.4.1, assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a self-assessable SAO is not met, and is therefore limited to the subject matter of the self-assessable SAOs that are not complied with. To remove any doubt, for those SAOs that are complied with, there is no need for assessment against the corresponding PO.

Part G - Criteria for self-assessable development - Lakeside precinct

Table 6.2.2.4.1 Self-assessable development - Lakeside precinct

Self-asses	ssable acceptable outcomes
	General criteria
Building s	etbacks
SAO1	Buildings and structures are setback as follows:
	a. road frontage - 6m
	b. side boundary - 3m
	c. rear boundary - 3m.
Site cover	
SAO2	Site cover does not exceed 40%.
Car parkir	g • • • • • • • • • • • • • • • • • • •
SAO3	On-site car parking is provided in accordance with Schedule 7 - Car parking.
SAO4	Minimum cycle parking spaces are provided at minimum 1 employee space per 200m² of GFA.
Waste	
SAO5	Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.
Lighting	
SAO6	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.
	Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.
Hazardous	s chemicals
SAO7	All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.1 Hazardous Chemicals Self-Assessable Thresholds complies with Schedule 9, Table 9.0.3 Hazardous Chemicals Self-Assessable Criteria.
SAO8	Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.2 Hazardous Chemicals Assessable Thresholds.
Clearing o	f habitat trees where not located in the Environmental areas overlay map
SAO9	Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:
	a. Clearing of a habitat tree located within an approved development footprint;

- Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- C. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within e. a registered easement for public infrastructure or drainage purposes;
- f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing g. open pastures and cropping land, windbreaks, lawns or created gardens;
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development. h.

Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.

Utilities SAO10 Wh	
SAO10 Wh	
a. b. c. d. e.	telecommunications and broadband; reticulated sewerage; reticulated water;
No pr	There not in a sewered area, the development is serviced by an appropriate on-site sewerage facility. Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.
Co wa	here not in an existing connections area or a future connections area as detailed in the Unitywater onnections Policy, the development is provided with an adequate water supply of 45,000 litres by ay of on-site storage which provides equivalent water quality and reliability to support the use quirements of the development.
Access	
SAO13 An wit	ny new or changes to existing site access and driveways are designed and located in accordance ith:

Where for a Council-controlled road, AS/NZS2890.1 section 3; or Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads b. and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval. **SAO14** Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design. **Stormwater SAO15** Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy - Integrated design. Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure. Site works and construction management **SAO16** The site and any existing structures are to be maintained in a tidy and safe condition. **SAO17** Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design. **SAO18** Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. **SAO19** All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works. **SAO20** Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification. **SAO21** Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times. **Earthworks SAO22** The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798. Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

The total of all cut and fill on-site does not exceed 900mm in height.

SAO23

Figure - Cut and fill Lot Boundaries 900mm

Note - This is site earthworks not building work.

SAO24

Filling or excavation does not result in:

- a reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

Note - Public sector entity is defined in the Sustainable Planning Act 2009

Fire services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or ii.

 - material change of use for outdoor sales (54), outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

SAO25

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005):

in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

- in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix h B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception C.
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external i. walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; ii
 - for outdoor sales $\binom{(54)}{r}$, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities; and
- in regard to fire hydrant accessibility and clearance requirements Part 3.5 and where applicable, Part 3.

SAO26

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- an unobstructed width of no less than 3.5m; a.
- an unobstructed height of no less than 4.8m; b.
- constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance; C.
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

SAO27

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

SAO28

For development that contains on-site fire hydrants external to buildings:

- those external hydrants can be seen from the vehicular entry point to the site; or
- a sign identifying the following is provided at the vehicular entry point to the site: h
 - the overall layout of the development (to scale);
 - internal road names (where used);
 - iii. all communal facilities (where provided);
 - the reception area and on-site manager's office (where provided);
 - external hydrants and hydrant booster points;
 - physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- a in a form:
- of a size:
- illuminated to a level: C.

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

SAO29 For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads. Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads. Use specific criteria Caretaker's accommodation (10) A caretaker's accommodation⁽¹⁰⁾ has a maximum GFA of 80m². **SAO30** No more than 1 caretaker's accommodation (10) is established per site. **SAO31 SAO32** Does not gain access from a separate driveway to the main use on the site. **SAO33** Includes a minimum 16m² of private open space directly accessible from a habitable room. Provide car parking in accordance with Schedule 7 - Car parking. **SAO34** Club (14) Limited to 1 club (14). **SAO35 SAO36** Development does not exceed 150m² GFA. Motor sport facility (48) Competitive use of the track by motor vehicles is limited to the hours of 9am to 7pm. **SAO37 SAO38** Non-competitive motor vehicle use complying with the vehicle standards in the Transport Operations (Road Use Management—Vehicle Standards and Safety) Regulation 2010 for use of the track is limited to the hours of 7am to 9pm. Note - for vehicle standards, see section 4 of the Transport Operations (Road Use Management-Vehicle Standards and Safety) Regulation 2010 **SAO39** Use of the track by motor vehicles is not to occur before 7am or after 9pm. Telecommunications facility⁽⁸¹⁾ Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz. **SAO40** A minimum of $45m^2$ is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility. **SAO41** The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval. **SAO42** Equipment shelters and associated structures are located:

b.

behind the main building line;

directly beside the existing equipment shelter and associated structures;

C. further away from the frontage than the existing equipment shelter and associated structures; a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive d. industry zones, the minimum side and rear setback is 3m. **SAO43** Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality. **SAO44** The facility is enclosed by security fencing or by other means to ensure public access is prohibited. **SAO45** A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design. Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design. All equipment comprising the telecommunications facility (81) which produces audible or non-audible **SAO46** sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Values and constraints criteria

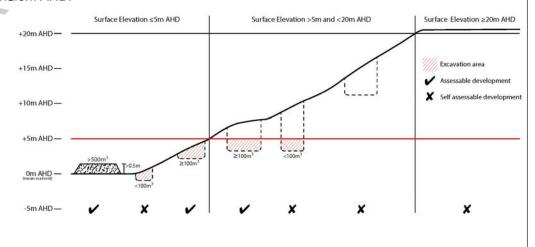

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

SAO47 Development does not involve:

- excavation or otherwise removing of more than 100m3 of soil or sediment where below 5m a. Australian Height Datum AHD, or
- filling of land of more than 500m3 of material with an average depth of 0.5m or greater where below the 5m AHD.

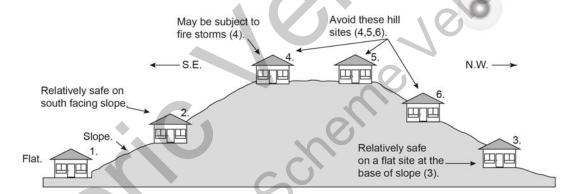

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

SAO48

- Building and structures are: a.
 - not located on a ridgeline
 - ii. not located on land with a slope greater than 15% (see Overlay map - Landslide hazard)
- Dwellings are located on east to south facing slopes. b.

House Sites Numbered in Order of Degree of Fire Safety

(1 being the safest, 6 being the most hazardous.) From Bushfire Prone Areas: Siting and Design of Residential Buildings (1997), Queensland Department of Local Government and Planning, and Queensland Fire & Rescue Service.

SAO49

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire a. attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- b. a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater:
- a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
- d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- an access path suitable for use by a standard fire fighting appliance having a formed width of at e. least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - i. to, and around, each building and other roofed structure; and
 - ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959.

SAO50 The length of driveway: to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road; has a maximum gradient no greater than 12.5%; b. have a minimum width of 3.5m: C. d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline. **SAO51** A reticulated water supply is provided by a distributer retailer for the area or, where not connected a. to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access b. to within 3m of that water storage source is provided. Where a tank is the nominated on-site fire fighting water storage source, it includes: C. a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank; ii fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Development does not involve the manufacture or storage of hazardous chemicals.

Note - The following are exempt from the native clearing provisions of this planning scheme:

- Clearing of native vegetation located within an approved development footprint; a.
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately b. required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public e. infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to f. and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping g. land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;

SAO52

Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

SAO53

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house⁽²²⁾ and all associated facilities* or an extension to an existing dwelling house⁽²²⁾ only, and comprises an area no greater than 1500m².

Note - *All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.

Editor's note - See in heading above for other uses exempt from native vegetation clearing requirements.

Editor's note - Where self-assessable vegetation clearance is being undertaken, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

- i. co-locating all associated activities, infrastructure and access strips
- be the least valued area of koala habitat on the site; ii.
- iii. minimise the footprint of the development envelope area;
- minimise edge effects to areas external to the development envelope; iv.
- ٧. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy - Environmental areas;
- sufficient area between the development and koala habitat trees to achieve their long-term viability.

Editor's note - Where self-assessable vegetation clearing is being undertaken, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy - Environmental areas.

SAO54

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

- Clearing of native vegetation located within an approved development footprint;
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary b. for emergency access or immediately required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses C. to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining g. existing open pastures and cropping land, windbreaks, lawns or created gardens;
- Grazing of native pasture by stock; h.
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development. i.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

SAO55

Development is for the preservation, maintenance, repair and restoration of the site, object or building.

This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

SAO56

A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy - Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.

This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.

SAO57

Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.

SAO58

The following development does not occur within 20m of the base of any significant tree, identified on Overlay map - Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character:

- construction of any building;
- laying of overhead or underground services; h
- any sealing, paving, soil compaction; C.
- any alteration of more than 75mm to the ground level prior to work commencing.

SAO59

Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

SAO60

Development does not:

- involve earthworks exceeding 50m³; a.
- involve cut and fill having a height greater than 600mm; b.
- involve any retaining wall having a height greater than 600mm; C.
- redirect or alter the existing flow of surface or groundwater.

SAO61

Buildings, excluding domestic outbuildings:

- are split-level, multiple-slab, pier or pole construction; a.
- b. are not single plane slab on ground.

SAO62

Development does not involve the manufacture, handling or storage of hazardous chemicals.

Infrastruct criteria ap	ure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment ply)				
SAO63	Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.				
SAO64	Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.				
SAO65	Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):				
	a. buildings or structures;				
	b. gates and fences;				
	c. storage of equipment or materials;				
	d. landscaping or earthworks or stormwater or other infrastructure.				
SAO66	On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected.				
SAO67	On-site sewerage facilities in a Water supply buffer for a dwelling house ⁽²²⁾ include:				
	a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time;				
	b. a reserve land application area of 100% of the effluent irrigation design area;c. land application areas that are vegetated;				
	d. the base of the land application field is at least 2 metres above the seasonal high water				
	table/bedrock (whichever is the closest to the base of the application area);				
	e. wastewater collection and storage systems must have capacity to accommodate full load at peak times.				
SAO68	On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging.				
SAO69	Development involving Permanent plantation ⁽⁵⁹⁾ within a Water supply buffer maintains a minimum of 30% ground cover at all times.				
SAO70	Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer.				
Overland f apply)	low path (refer Overlay map - Overland flow path to determine if the following assessment criteria				
SA071	Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.				
SAO72	Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.				
	Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.				
	Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow				

SAO73	Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.
SA074	Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.
SA075	Development for a material change of use or building work for a Park ⁽⁵⁷⁾ ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the following assessment criteria apply)

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps - Riparian and wetland setbacks.

SAO76

No development is to occur within:

- 50m from top of bank for W1 waterway and drainage line a.
- b. 30m from top of bank for W2 waterway and drainage line
- 20m from top of bank for W3 waterway and drainage line C.
- 100m from the edge of a Ramsar wetland, 50m from all other wetlands. d.

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps - Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part H — Criteria for assessable development - Lakeside precinct

Where development is code assessable development in the Table of Assessment, the assessment criteria for that development are set out in Part H, Table 6.2.2.4.2.

Where development is impact assessable, the assessment criteria becomes the whole of the planning scheme.

Table 6.2.2.4.2 Assessable development - Lakeside precinct

Performance outcomes	Acceptable outcomes	
General criteria		
Precinct function		

PO1		No acceptable outcome provided.	
Dev from facil	elopment does not compromise, depart or detract in the primary role of the precinct for motor sport ity ⁽⁴⁸⁾ use.		
Buil	t form and design		
PO2	2	No acceptable outcome provided.	
Buildings and structures are of a height, scale and bulk which:		·.O`	
a.	is visually compatible with existing buildings or structures;	(C)	
b.	does not appear dominant, overbearing or out-of-character with the surrounding low density, low intensity built form environment;	O Significant of the state of t	
C.	minimises the visual impact of large-scale built form;		
d.	does not result in a significant loss of visual amenity or outlook.		
PO3	*	A03.1	
to:	dings and structures are designed and constructed	Development provides materials and finishes of a high quality that are not susceptible to stain, discolour or deterioration.	
a.	incorporate a mix of colours and high quality materials to add diversification to treatments and finishes;	AO3.2	
b.	avoid blank walls through façade articulation to create visual interest and deter graffiti and vandalism;	Development incorporates articulated walls with variation, detail and colour to reduce the bulk and impact of development and minimise expansive blank walls.	
C.	reduce cluttering of plant and equipment on building roofs.	AO3.3	
	PC.	Building utilities such as lift motor rooms and telecommunications equipment are designed to be visually integrated with the building.	
PO4		A04	
are cha	elopment will ensure that buildings and structures not overbearing, visually dominant or out of racter with the surrounding built environment nor act from the amenity of adjoining land.	Site cover of all buildings and structures does not exceed 40%.	
Buil	ding setbacks		
POS	j	AO5	
Building setback:		Buildings and structures are setback as follows, unless otherwise indicated:	

- a. is sufficient to minimise overlooking and maintain privacy of adjoining properties;
- b. is sufficient to ensure development is not visually dominant or overbearing on adjoining properties.
- a. road frontage - 6m
- b. side boundary - 3m
- C. rear boundary - 3m

Personal and property safety

PO6

Buildings and spaces are designed and constructed to create a safe and secure environment by incorporating key crime prevention through environmental design principles, including:

- casual surveillance opportunities and sight lines; a.
- b. way-finding cues and signage;
- C. light illuminates pathways and potential entrapment areas as well as maximising opportunities for penetration of natural light into spaces:
- minimise predictable routes and entrapment d. locations.

No acceptable outcome provided.

Amenity

PO7

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, light, chemicals and other environmental nuisances.

No acceptable outcome provided.

Hazardous chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO8

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

AO8.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

For any hazard scenario involving the release of gases or vapours:

- i. AEGL2 (60minutes) or if not available ERPG2;
- ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- For any hazard scenario involving fire or explosion: b.
 - 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO8.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.

AO8.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2;
 - An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- For any hazard scenario involving fire or explosion:
 - 7kPa overpressure;
 - 4.7kW/m² heat radiation.

If criteria AO8.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.

AO8.3

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

Dangerous Dose

For any hazard scenario involving the release of gases or vapours:

i. AEGL2 (60minutes) or if not available ERPG2;

- ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- For any hazard scenario involving fire or explosion:
 - 14kPa overpressure;
 - 12.6kW/m² heat radiation. ii.

If criteria AO8.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.

PO9

Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

AO9

Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.

PO10

Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

AO10

Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.

PO11

Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

AO11.1

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively:

- bulk tanks are anchored so they cannot float if a. submerged or inundated by water; and
- b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

AO11.2

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

Traffic matters

PO12

No acceptable outcome provided.

Traffic generation, vehicle movement and on-site car parking associated with an activity:

- provides safe, convenient and accessible access for vehicles and pedestrians:
- b. provides safe and convenient on-site parking and manuoevring to meet anticipated parking demand:
- is appropriate to the road classification and carrying capacity of the local network and able to meet the additional demands generated by the development;
- d. does not result in adverse impacts on the efficient and safe functioning of the road network.

Bicycle parking and end of trip facilities

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

PO13

- End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:
 - adequate bicycle parking and storage i. facilities; and
 - adequate provision for securing belongings; and
 - change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.
- Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:
 - the projected population growth and forward planning for road upgrading and development of cycle paths; or
 - ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or
 - the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

AO13.1

Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO13.2

Bicycle parking is:

- provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;
- b. protected from the weather by its location or a dedicated roof structure:
- located within the building or in a dedicated, secure structure for residents and staff;
- d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the acceptable outcomes under this heading meet the current performance requirement prescribed in the Queensland Development Code.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO13.3

For non-residential uses, storage lockers:

- are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);
- have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO13.4

For non-residential uses, changing rooms:

- are provided at a rate of 1 per 10 bicycle parking spaces:
- b. are fitted with a lockable door or otherwise screened from public view;
- are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

Bicycle spaces provided	Male/ Female	Change rooms required	Showers required	Sanitary compartments required	Washbasins required
1-5	Male and female	1 unisex change room	1	1 closet pan	1
6-19	Female	1	1	1 closet pan	1
20 or more	Male	1	1	1 closet pan	1
more	Female	1	2, plus 1 for every 20 bicycle spaces provided thereafter	2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter	1, plus 1 for every 60 bicycle parking spaces provided thereafter

Male	1	2, plus 1 for every 20 bicycle spaces provided thereafter	1 urinal and 1 closet pans, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter	1, plus 1 for every 60 bicycle parking spaces provided thereafter
------	---	--	---	---

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

- d. are provided with:
 - a mirror located above each wash basin;
 - a hook and bench seating within each shower compartment;
 - a socket-outlet located adjacent to each wash basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

Landscaping and screening

PO14

Landscaping and screening is provided in a manner that:

- achieves a high level of privacy and amenity to a. sensitive land uses on adjoining properties and when viewed from the street;
- b. reduces the visual impact of building bulk and presence and hard surface areas on the local character and amenity of adjoining sensitive land uses and from the street;
- C. creates a secure and safe environment by incorporating key elements of crime prevention through environmental design;
- d. achieves the design principles outlined in Planning scheme policy - Integrated design.

No acceptable outcome provided.

Loading and servicing

PO15

Loading and servicing areas:

- are not visible from the street frontage;
- b. are integrated into the design of the building;
- include screening and buffers to reduce negative impacts on adjoining sensitive land uses.

No acceptable outcome provided.

Waste

PO16

Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy - Waste.

No acceptable outcome provided.

Noise

PO17

Noise generating uses do not adversely affect existing noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy Noise.

No acceptable outcome provided.

Clearing of habitat trees where not located within the Environmental areas overlay map

PO18

- Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.
- Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.
- Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

No acceptable outcome provided

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas

Works criteria

Utilities

PO19

The development is connected to an existing reticulated electricity supply system approved by the relevant energy regulating authority.

AO19

Development is connected to underground electricity.

PO20

The development has access to telecommunications and broadband services in accordance with current standards.

No acceptable outcome provided

PO21

The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to public health.

AO21.1

Where in a sewered area, the development is connected to a reticulated sewerage network.

AO21.2

Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility.

Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.

AO21.3

Trade waste is pre-treated on-site prior to discharging into the sewerage network.

PO22

The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water.

AO22.1

Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.

AO22.2

Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water

	supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development.		
PO23	No acceptable outcome provided		
The development is provided with constructed and dedicated road access.			
Access	•		
PO24	No acceptable outcome provided		
Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.	O G G G G G G G G G G G G G G G G G G G		
PO25	AO25.1		
The layout of the development does not compromise: a. the development of the road network in the area; b. the function or safety of the road network; c. the capacity of the road network. Note - The road hierarchy is mapped on Overlay map - Road hierarchy. PO26 Safe access is provided for all vehicles required to access the site.	The development provides for the extension of the road network in the area in accordance with Council's road network planning. AO25.2 The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning. AO25.3 The lot layout allows forward access to and from the site. AO26.1 Site access and driveways are designed and located in accordance with: a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or		
	a copy of a Transport Infrastructure Act 1994, section 62 approval. AO26.2		
	Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.		

Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.

AO26.3

Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.

PO27

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- b. ensure the orderly and efficient continuation of the active transport network;
- C. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

- Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or
- Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

No acceptable outcome provided

Stormwater

PO28

No acceptable outcome provided

Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater $% \left(1\right) =\left(1\right) \left(1\right)$ is discharged into a catchment that includes State Transport Infrastructure.

No acceptable outcome provided

PO29

Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.

PO30

Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP.

Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.

No acceptable outcome provided

PO31

Easements for drainage purposes are provided over:

- stormwater pipes located in freehold land if the pipe diameter exceeds 300mm;
- b. overland flow paths where they cross more than one property boundary.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided

Site works and construction management **PO32** No acceptable outcome provided The site and any existing structures are maintained in a tidy and safe condition. **PO33** AO33.1 All works on-site are managed to: Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in minimise as far as practicable, impacts on accordance with the Urban Stormwater Quality Planning adjoining or adjacent premises and the Guidelines, Planning scheme policy - Stormwater streetscape in regard to erosion and management and Planning scheme policy - Integrated sedimentation, dust, noise, safety and light; design, including but not limited to the following: minimise as far as possible, impacts on the stormwater is not discharged to adjacent properties natural environment: in a manner that differs significantly from pre-existing C. ensure stormwater discharge is managed in a conditions; manner that does not cause nuisance or b. stormwater discharged to adjoining and downstream annoyance to any person or premises; properties does not cause scour and erosion; avoid adverse impacts on street trees and their d. C. stormwater discharge rates do not exceed pre-existing critical root zone. conditions: the 10% AEP storm event is the minimum design d. storm for all temporary diversion drains; and the 50% AEP storm event is the minimum design storm for all silt barriers and sedimentation basins. AO33.2 Stormwater runoff, erosion and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness. Note - The measures are adjusted on-site to maximise their effectiveness AO33.3 The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property. AO33.4 Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

A34.1

No dust emissions extend beyond the boundaries of the

site during soil disturbances and construction works.

PO34

Dust suppression measures are implemented during

soil disturbances and construction works to protect

nearby premises from unreasonable dust impacts.

PO35

All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

Note - Where the amount of imported or exported material is greater than 50m³, a haulage route must be identified and approved by Council.

AO35.1

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

AO35.2

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

AO35.3

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

PO36

All disturbed areas are rehabilitated at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

AO36

At completion of construction all disturbed areas of the site are to be:

- topsoiled with a minimum compacted thickness of fifty (50) millimetres;
- grassed. b.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

PO37

The clearing of vegetation on-site:

- is limited to the area of infrastructure works, a. building areas and other necessary areas for the works; and
- includes the removal of declared weeds and other b. materials which are detrimental to the intended use of the land:
- is disposed of in a manner which minimises nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

AO37.1

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.

AO37.2

Disposal of materials is managed in one or more of the following ways:

- all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility;
- b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

PO38

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

No acceptable outcome provided

Earthworks

PO39

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- the natural topographical features of the site; a.
- b. short and long-term slope stability;
- soft or compressible foundation soils; C.
- d. reactive soils:
- low density or potentially collapsing soils;
- f. existing fill and soil contamination that may exist on-site;
- the stability and maintenance of steep rock g. slopes and batters;
- excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note - Filling or excavation works are to be completed within six months of the commencement date.

AO39.1

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

AO39.2

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

AO39.3

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

AO39.4

All filling or excavation is contained on-site.

AO39.5

All fill placed on-site is:

- limited to that required for the necessary approved a.
- b. clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

AO39.6

The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

PO40

Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

AO40

Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Figure - Embankment

PO41

Filling or excavation is undertaken in a manner that:

- does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;
- b. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO41.1

No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO41.2

Filling or excavation that would result in any of the following is not carried out on-site:

- a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.

Note - Public sector entity as defined in the Sustainable Planning Act 2009

PO42

Filling or excavation does not result in land instability.

Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.

No acceptable outcome provided

PO43

Development does not result in

- adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;
- b. increased flood inundation outside the site;
- any reduction in the flood storage capacity in the C. floodway;
- d. and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.

No acceptable outcome provided.

Retaining walls and structures

PO44

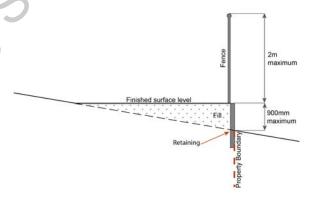

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

A044

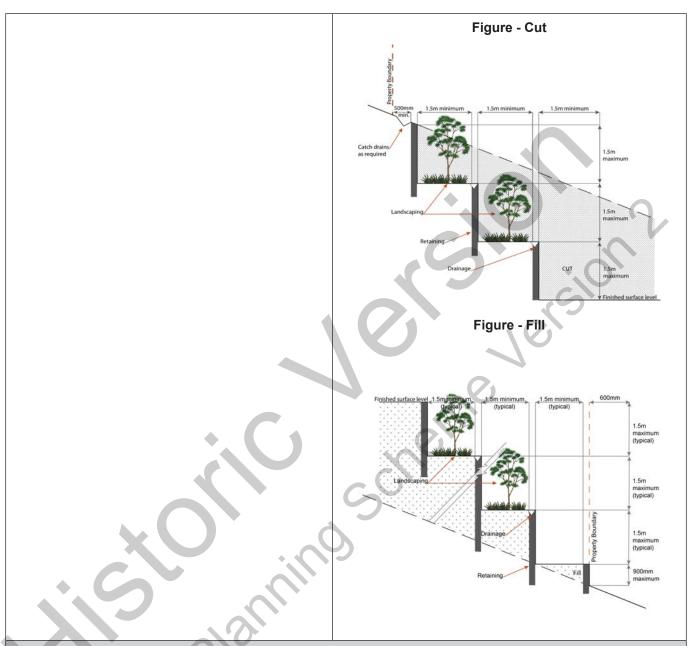

Earth retaining structures:

- are not constructed of boulder rocks or timber; a.
- where height is no greater than 900mm, are provided b. in accordance with Figure - Retaining on a boundary;

Figure - Retaining on boundary

- where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;
- d. where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal, terraced, landscaped and drained as shown below.

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply: h
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO45

Development incorporates a fire fighting system that:

- satisfies the reasonable needs of the fire fighting entity for the area;
- is appropriate for the size, shape and topography b. of the development and its surrounds;
- is compatible with the operational equipment C. available to the fire fighting entity for the area;
- d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another:
- considers the fire hazard inherent in the e. surrounds to the development site;
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

AO45.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

- in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative:
- in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; for outdoor sales ⁽⁵⁴⁾, processing or storage facilities,
 - hydrant coverage is required across the entire area of the outdoor sales ⁽⁵⁴⁾, outdoor processing and outdoor storage facilities;
- in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

AO45.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- an unobstructed width of no less than 3.5m; a.
- b. an unobstructed height of no less than 4.8m;
- constructed to be readily traversed by a 17 tonne HRV C. fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO45.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.

PO46 AO46 On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

For development that contains on-site fire hydrants external to buildings:

- those external hydrants can be seen from the vehicular entry point to the site; or
- b. a sign identifying the following is provided at the vehicular entry point to the site:
 - the overall layout of the development (to scale); i.
 - ii. internal road names (where used);
 - all communal facilities (where provided) iii.
 - the reception area and on-site manager's office iv (where provided);
 - external hydrants and hydrant booster points;
 - physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- in a form;
- of a size:
- illuminated to a level;

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the

PO47

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

AO47

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific criteria

Caretaker's accommodation (10)

PO48

Development for a Caretaker's accommodation (10):

AO48

Caretaker's accommodation⁽¹⁰⁾:

- does not compromise the productivity of the use; a.
- is domestic in scale; b.
- C. provides adequate car parking provisions exclusive to the primary use of the site;
- d. is safe for the residents;
- has regards to the landscape and private e. recreation needs of the resident.

- has a maximum GFA of 80m²;
- no more than 1 caretaker's accommodation⁽¹⁰⁾ is b. established per site;
- does not gain access from a separate driveway to the C. main use on the site;
- provides a minimum 16m² of private open space d. directly accessible from a habitable room;
- provides car parking in accordance with Schedule 7 e. Car parking.

Club (14)

PO49

Development will be of a low scale and intensity that;

- maintains its subordinate function and nexus to a. the motor sport facility (48):
- b. does not interfere with operation of the motor sport facility⁽⁴⁸⁾.

No acceptable outcome provided

Food and drink outlet (28)

PO50

Development does not involve the use of a drive-through facility.

No acceptable outcome provided.

Major electricity infrastructure (43), Substation and Utility installation (86)

PO51

The development does not have an adverse impact on the visual amenity of a locality and is:

- high quality design and construction; a.
- visually integrated with the surrounding area; b.
- not visually dominant or intrusive; C.
- located behind the main building line; d.
- below the level of the predominant tree canopy e. or the level of the surrounding buildings and structures:
- camouflaged through the use of colours and f. materials which blend into the landscape;
- treated to eliminate glare and reflectivity; g.
- h. landscaped:
- otherwise consistent with the amenity and i. character of the zone and surrounding area.

AO51.1

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- are enclosed within buildings or structures; a.
- b. are located behind the main building line;
- C. have a similar height, bulk and scale to the surrounding fabric;
- d. have horizontal and vertical articulation applied to all exterior walls.

AO51.2

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

PO52

Infrastructure does not have an impact on pedestrian health and safety.

AO52

Access control arrangements:

do not create dead-ends or dark alleyways adjacent to the infrastructure; b. minimise the number and width of crossovers and entry points; provide safe vehicular access to the site; C. d. do not utilise barbed wire or razor wire. **PO53 AO53** All activities associated with the development occur All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating within an environment incorporating sufficient controls to ensure the facility: sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental generates no audible sound at the site Protection (Noise) Policy 2008. boundaries where in a residential setting; or

Motor sport facility (48)

PO54

PO55

Development will:

- a. ensure safety of people and property;
- b. minimise amenity impacts including noise nuisance to sensitive land uses;

meet the objectives as set out in the

Environmental Protection (Noise) Policy 2008.

- minimise noise impacts on wildlife outside of daylight hours;
- ensure development is consistent with objectives d. setout in Planning scheme policy - Noise.

No acceptable outcome provided

Telecommunications facility (81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.

AO55.1

Telecommunications facilities $^{(81)}$ are co-located with existing telecommunications facilities $^{(81)}$, Utility installation $^{(86)}$, Major electricity infrastructure $^{(43)}$ or Substation $^{(80)}$ if there is already a facility in the same New telecommunication facilities (81) are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures. coverage area. AO55.2 If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site. **PO56 AO56**

A new Telecommunications facility (81) is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

PO57

Telecommunications facilities (81) do not conflict with lawful existing land uses both on and adjoining the site.

AO57

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

PO58

The Telecommunications facility (81) does not have an adverse impact on the visual amenity of a locality and is:

- a. high quality design and construction;
- b. visually integrated with the surrounding area;
- not visually dominant or intrusive; C.
- d. located behind the main building line;
- below the level of the predominant tree canopy e. or the level of the surrounding buildings and
- f. camouflaged through the use of colours and materials which blend into the landscape;
- treated to eliminate glare and reflectivity; g.
- landscaped; h.
- otherwise consistent with the amenity and i. character of the zone and surrounding area.

AO58.1

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

AO58.2

In all other areas towers do not exceed 35m in height.

AO58.3

Towers, equipment shelters and associated structures are of a design, colour and material to:

- reduce recognition in the landscape; a.
- reduce glare and reflectivity. b.

AO58.4

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

AO58.5

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

AO58.6

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design. **PO59** AO59 Lawful access is maintained to the site at all times that An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the does not alter the amenity of the landscape or facility in a manner that is appropriate to the site's context. surrounding uses. **PO60** AO60 All equipment comprising the Telecommunications facility⁽⁸¹⁾ All activities associated with the development occur within an environment incorporating sufficient controls which produces audible or non-audible sound is housed to ensure the facility generates no audible sound at within a fully enclosed building incorporating sound control the site boundaries where in a residential setting. measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan is prepared by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in Planning scheme policy - Acid sulfate soils.

PO61

Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- is managed to avoid or minimise the release of a. surface or groundwater flows containing acid and metal contaminants into the environment;
- protects the environmental and ecological values b. and health of receiving waters;
- protects buildings and infrastructure from the effects of acid sulfate soils.

AO61

Development does not involve:

- excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or
- filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy - Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

PO62

Development:

- minimises the number of buildings and people working and living on a site exposed to bushfire
- ensures the protection of life during the passage b. of a fire front:
- is located and designed to increase the chance of survival of buildings and structures during a bushfire:
- minimises bushfire risk from build up of fuels d. around buildings and structures:
- ensure safe and effective access for emergency e. services during a bushfire.

AO62.1

Buildings and structures are:

- not located on a ridgeline;
- not located on land with a slope greater than 15% (see Overlay map - Landslide hazard);
- dwellings are located on east to south facing slopes.

AO62.2

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the a. distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed structures;
- an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:
 - to, and around, each building and other roofed structure; and
 - ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO63

Development and associated driveways and access ways:

- avoid potential for entrapment during a bushfire; a.
- b. ensure safe and effective access for emergency services during a bushfire;
- C. enable safe evacuation for occupants of a site during a bushfire.

AO63

A length of driveway:

- to a road does not exceed 100m between the most a. distant part of a building used for any purpose other than storage and the nearest part of a public road;
- b. has a maximum gradient no greater than 12.5%;
- have a minimum width of 3.5m; C.
- d. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

PO64

AO64

Development provides an adequate water supply for fire-fighting purposes.

- a reticulated water supply is provided by a distributer retailer for the area or;
- b. where not connected to a reticulated water supply. on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
- Where a swimming pool is the nominated on-site fire C. fighting water storage source, vehicle access is provided to within 3m of that water storage source.
- Where a tank is the nominated on-site fire fighting d. water storage source, it includes:
 - a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
 - fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

PO65

Development:

- does not present unacceptable risk to people or a. environment due to the impact of bushfire on dangerous goods or combustible liquids;
- does not present danger or difficulty to b. emergency services for emergency response or evacuation.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

A065

Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are exempt from the native vegetation clearing provisions of this planning scheme:

- Clearing of native vegetation located within an approved development footprint; a.
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately b. required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage C. to infrastructure;
- Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public e infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;

- Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO66

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

- the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded;
- on-site mitigation measures, mechanisms or b. processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*

* Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.

No acceptable outcome provided.

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- retaining habitat trees; a.
- b. providing contiguous patches of habitat;

No acceptable outcome provided.

PO67

C. provide replacement and rehabilitation planting to improve connectivity; avoiding the creation of fragmented and isolated d. patches of habitat: providing wildlife movement infrastructure. e. Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. Vegetation clearing and habitat protection **PO68** No acceptable outcome provided. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected. **PO69** No acceptable outcome provided. Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will: rehabilitate, revegetate, restore and enhance an a. area to ensure it continues to function as a viable and healthy habitat area; provide replacement fauna nesting boxes in the b. event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework. **PO70** No acceptable outcome provided. Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by: providing contiguous patches of habitat; a. avoiding the creation of fragmented and isolated patches of habitat; providing wildlife movement infrastructure; C. d. providing replacement and rehabilitation planting to improve connectivity. Vegetation clearing and soil resource stability **PO71** No acceptable outcome provided. Development does not:

result in soil erosion or land degradation; a. leave cleared land exposed for an unreasonable b. period of time but is rehabilitated in a timely manner. Vegetation clearing and water quality **PO72** No acceptable outcome provided Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by: ensuring an effective vegetated buffers and a. setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads: avoiding or minimising changes to landforms to maintain hydrological water flows; adopting suitable measures to exclude livestock. C. from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities. **PO73** No acceptable outcome provided. Development minimises adverse impacts of stormwater run-off on water quality by: minimising flow velocity to reduce erosion; a. minimising hard surface areas; b. C. maximising the use of permeable surfaces; incorporating sediment retention devices; d. minimising channelled flow. Vegetation clearing and access, edge effects and urban heat island effects **PO74** No acceptable outcome provided. Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment. **PO75** No acceptable outcome provided. Development minimises potential adverse 'edge effects' on ecological values by: providing dense planting buffers of native a. vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas; restoring, rehabilitating and increasing the size C. of existing patches of native vegetation;

- d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors;
- e. landscaping with native plants of local origin.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

PO76

Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- pervious surfaces; a.
- providing deeply planted vegetation buffers and b. green linkage opportunities;
- landscaping with local native plant species to C. achieve well-shaded urban places;
- d. increasing the service extent of the urban forest canopy.

No acceptable outcome provided.

Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

PO77

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.

No acceptable outcome provided.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy - Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO78

Development will:

- not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- b. protect the fabric and setting of the heritage site, object or building;
- be consistent with the form, scale and style of C. the heritage site, object or building;
- utilise similar materials to those existing, or where d. this is not reasonable or practicable, neutral materials and finishes;
- incorporate complementary elements, detailing e. and ornamentation to those present on the heritage site, object or building;
- f. retain public access where this is currently provided.

AO78

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

PO79

Demolition and removal is only considered where:

- a report prepared by a suitably qualified a. conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
- C. limited demolition is performed in the course of repairs, maintenance or restoration; or
- demolition is performed following a catastrophic d. event which substantially destroys the building or object.

No acceptable outcome provided

PO80

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No acceptable outcome provided.

PO81

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

AO81

Development does:

- not result in the removal of a significant tree; a.
- not occur within 20m of a protected tree; b.
- involve pruning of a tree in accordance with Australian C. Standard AS 4373-2007 – Pruning of Amenity Trees.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy – Landslide hazard.

PO82

Development:

- maintains the safety of people and property on a. a site and neighbouring sites from landslides;
- ensures the long-term stability of the site b. considering the full nature and end use of the development;
- ensures site stability during all phases of construction and development;
- d. minimises disturbance of natural drainage patterns of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater
- e. minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

AO82

Development does not:

- involve earthworks exceeding 50m3;
- involve cut and fill having a height greater than b. 600mm;
- C. involve any retaining wall having a height greater than 600mm;
- d. redirect or alter the existing flow of surface or groundwater.

PO83

Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

- minimising overuse of cut and fill to create single flat pads and benching;
- avoiding expanses of retaining walls, loss of trees b. and vegetation and interference with natural drainage systems;
- minimising any adverse visual impact on the C. landscape character;
- d. Protect the amenity of adjoining properties.

AO83

Buildings, excluding domestic outbuildings:

- are split-level, multiple-slab, pier or pole construction; a.
- b. are not single plane slab on ground.

PO84

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

the long-term stability of the development site considering the full nature and end use of the development;

AO84

Development does not involve the manufacture, handling or storage of hazardous chemicals.

- site stability during all phases of construction and development;
- the development is not adversely affected by C. landslide activity originating on sloping land above the site:
- emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

PO85

Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.

AO85.1

Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous.

AO85.2

Incineration or burial of waste within a Water supply buffer is not undertaken onsite.

AO85.3

Solid waste within a Water supply buffer is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

AO85.4

Holding tanks within a Water supply buffer are used for all liquid waste and provide for the separation of oils/solvents and solids prior to pump-out and collection by a licenced contractor.

AO85.5

Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

PO86

On-site sewerage systems within a Water supply buffer are designed and operated to ensure there is no worsening or adverse impacts to health risks, environmental risks and water quality.

Editor's Note - For guidance refer to the Seq water Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

A086

Secondary treated wastewater treatment systems within a Water supply buffer include:

- emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging;
- back up pump installation and backup power;

C. MEDLI modelling to determine irrigation rates and sizing of irrigation areas; d. vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and e. wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities. **PO87 AO87** Development within a Bulk water supply infrastructure Development: buffer is located, designed and constructed to: does not involve the construction of any buildings or a. protect the integrity of the water supply pipeline; structures within a Bulk water supply infrastructure maintain adequate access for any required b. maintenance or upgrading work to the water involving a major hazard facility or environmentally relevant activity (ERA) is setback 30m from a Bulk supply pipeline; water supply infrastructure buffer. **PO88 A088** Development is located and designed to maintain Development does not restrict access to Bulk water supply required access to Bulk water supply infrastructure. infrastructure of any type or size, having regard to (among other things): buildings or structures; gates and fences; storage of equipment or materials; C. landscaping or earthworks or stormwater or other d. infrastructure. Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply) Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council. PO89 No acceptable outcome provided. Development: minimises the risk to persons from overland flow; does not increase the potential for damage from h. overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. **PO90** AO90 Development: No acceptable outcome provided. maintains the conveyance of overland flow a. predominantly unimpeded through the premises

for any event up to and including the 1% AEP for the fully developed upstream catchment;

does not concentrate, intensify or divert overland b. flow onto an upstream, downstream or surrounding property.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland

No acceptable outcome provided.

PO91

Development does not:

- directly, indirectly or cumulatively cause any increase in overland flow velocity or level;
- increase the potential for flood damage from b. overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.

Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.

PO92

Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.

A092

Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.

PO93

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

AO93

Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.

PO94

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

AO94.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- a. Urban area – Level III;
- b. Rural area - N/A;

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow

- Industrial area Level V;
- d. Commercial area - Level V.

AO94.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

PO95

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a. a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- an overland flow path where it crosses more than one premises;
- inter-allotment drainage infrastructure. C.

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided.

Additional criteria for development for a Park (57)

PO96

Development for a Park⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

- public benefit and enjoyment is maximised;
- b. impacts on the asset life and integrity of park structures is minimised;
- maintenance and replacement costs are minimised.

AO96

Development for a Park⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

Riparian and wetland setbacks

PO97

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- impact on fauna habitats; a.
- b. impact on wildlife corridors and connectivity;

AO97

Development does not occur within:

- 50m from top of bank for W1 waterway and drainage
- b. 30m from top of bank for W2 waterway and drainage

- C. impact on stream integrity;
- impact of opportunities for revegetation and d. rehabilitation planting;
- edge effects. e.

- 20m from top of bank for W3 waterway and drainage
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

6.2.2.5 Special use precinct

6.2.2.5.1 Purpose – Special use precinct

- The Special use precinct comprises a number of community based uses including, but not limited to emergency services, Shaftsbury citizen centre, Woodford correctional centre, tourist attractions, cemeteries, and building and facilities associated with religious groups. The purpose of the code will be achieved through the following overall outcomes for the Special use precinct:
 - Development supports the continued use of the precinct in appropriate locations for artistic, cultural and social community activities and emergency services.
 - Development is designed and operated to provide a high level of amenity and maintains the safety of b. people and property through crime prevention through environmental design principles (CPTED).
 - Development is of a scale, height and bulk that provides a high level of amenity and is sensitive to the C character of the surrounding area.
 - Markets⁽⁴⁶⁾ and outdoor entertainment events are temporary or periodic in nature, and of a scale and d. intensity where any adverse impacts on the surrounds are mitigated and internalised to the site. Markets (46) and outdoor events do not adversely impact on the safe and efficient operation of the external road network.
 - General works associated with the development achieves the following: e.
 - new development is provided with a high standard of services to meet and support the current and i. future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - the development manages stormwater to: ii.
 - ensure the discharge of stormwater does not adversely affect the quality, environmental values Α. or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - maintain or improve the structure and condition of drainage lines and riparian areas; C.
 - avoid off-site adverse impacts from stormwater.
 - the development does not result in unacceptable impacts on the capacity and safety of the external road network:
 - the development ensures the safety, efficiency and useability of access ways and parking areas;
 - site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
 - Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
 - Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
 - Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
 - i. Development in a Water supply buffer is undertaken in a manner which contributes to the maintenance and enhancement where possible of water quality to protect the drinking water and aquatic ecosystem environmental values in those catchments.
 - Development avoids areas subject to constraint, limitation, or environmental value. Where development j. cannot avoid these identified areas, it responds by:
 - adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;

- when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Segwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
- iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - the provision of replacement, restoration, rehabilitation planting and landscaping; A.
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014. C.
- protecting native species and protecting and enhancing species habitat; V.
- protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
- establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
- establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
- ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance ix. and safety of identified infrastructure;
- ensuring effective and efficient disaster management response and recovery capabilities; Χ.
- where located in an overland flow path: χi.
 - development siting, built form, layout and access responds to the risk presented by the overland Α. flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- Development in the Special use precinct includes one or more of the following:

Caretaker's accommodation ⁽¹⁰⁾ Cemetery ⁽¹²⁾ - if involving	•	Emergency services ⁽²⁵⁾ - if located on Council or State owned land	•	Tourist park ⁽⁸⁴⁾ - if involving extension to an existing Tourist park ⁽⁸⁴⁾
the extension of an existing Cemetery or located on Council or Sate owned land Community use (17)	•	Tourist attraction ⁽⁸³⁾ - if located on Lot 3 SP256486 [Caboolture Historical Village] or located on Lot3 SP136818, Lot 28 SL6772 or Lot 5 S31161[North Pine Country Park]	•	Transport depot ⁽⁸⁵⁾ (if in accordance with a Council Master Plan approved under Council policy) Telecommunication facilities ⁽⁸¹⁾

k. Development in the Special use precinct does not include any of the following:

 Adult store⁽¹⁾ 	•	Hospital ⁽³⁶⁾	•	Retirement facility ⁽⁶⁷⁾
Agricultural supplies store ⁽²⁾	•	Hotel ⁽³⁷⁾	•	Roadside stall ⁽⁶⁸⁾

Air services (3) Indoor sport and recreation (38) Rooming accommodation(69) Animal husbandry (4) Intensive animal industry (39) Rural industry⁽⁷⁰⁾ Animal keeping⁽⁵⁾ Intensive horticulture (40) Rural workers' accommodation⁽⁷¹⁾ Aquaculture (6) Landing⁽⁴¹⁾ Bar⁽⁷⁾ Sales office⁽⁷²⁾ Low impact industry⁽⁴²⁾ Brothel⁽⁸⁾ Service industry⁽⁷³⁾ Major electricity infrastructure (43) Bulk landscape supplies (9) Service station (74) Car wash⁽¹¹⁾ Shop⁽⁷⁵⁾ Major sport, recreation and entertainment facility (44) Shopping centre⁽⁷⁶⁾ Cemetery⁽¹²⁾ (if not located Marine industry (45) on Council or Sate owned land) Short-term Medium impact industry⁽⁴⁷⁾ accommodation⁽⁷⁷⁾ Club⁽¹⁴⁾ Motor sport facility (48) Showroom⁽⁷⁸⁾ Community care centre⁽¹⁵⁾ Multiple dwelling⁽⁴⁹⁾ Special industry (79) Community residence⁽¹⁶⁾ Nature-based tourism (50) Theatre⁽⁸²⁾ Crematorium⁽¹⁸⁾ (where Nightclub entertainment facility⁽⁵¹⁾ Tourist attraction (83) (if not within 500m of a sensitive land use or a residential located on Lot 3 dwelling) SP256486 [Caboolture Non-resident workforce Historical Village] or Cropping (19) accommodation⁽⁵²⁾ Located on Lot3 SP136818, Lot 28 SL6772 Office⁽⁵³⁾ Detention facility⁽²⁰⁾ or Lot 5 S31161[North Pine Country Park]) Dual occupancy⁽²¹⁾ Outdoor sales⁽⁵⁴⁾ Tourist park⁽⁸⁴⁾ (if not Dwelling house⁽²²⁾ Outdoor sport and recreation⁽⁵⁵⁾ involving the extension of an existing Tourist Park⁽⁸⁴⁾) Dwelling unit⁽²³⁾ Parking station⁽⁵⁸⁾ Environmental facility (26) Transport depot⁽⁸⁵⁾ (if not Permanent plantation⁽⁵⁹⁾ located on Council or Extractive industry⁽²⁷⁾ State owned land) Port services (61) Function facility⁽²⁹⁾ Veterinary services⁽⁸⁷⁾ Relocatable home park⁽⁶²⁾ Garden centre⁽³¹⁾ Warehouse⁽⁸⁸⁾ Renewable energy facility⁽⁶³⁾ Hardware and trade supplies (32) Wholesale nursery (89) Research and technology industry⁽⁶⁴⁾ Winery⁽⁹⁰⁾

Residential care facility⁽⁶⁵⁾

Resort complex⁽⁶⁶⁾

Health care services (33)

High Impact industry (34)

Home based business (35)

Development not listed in the tables above may be considered on its merits and where it reflects and ١. supports the outcomes of the zone.

6.2.2.5.2 Criteria for assessment

To determine if development is self-assessable, development must comply with the self-assessable acceptable outcomes set out in Part I, Table 6.2.2.5.1. Where development does not meet a self-assessable acceptable outcome (SAO) of the relevant criteria Part I, Table 6.2.2.5.1, assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a SAO is not met, and is therefore limited to the subject matter of the SAOs that are not complied with. To remove any doubt, for those SAOs that are complied with, there is no need for assessment against the corresponding PO.

Part I - Criteria for self-assessable development - Special use precinct

Table 6.2.2.5.1 Self-assessable development - Special use precinct

Self-assessable acceptable outcomes					
General criteria					
Building setba	cks				
SAO1	Buildings and structures are setback as follows:				
	a. road frontage - 6m				
	b. side boundary - 3m				
	c. rear boundary - 3m				
Building heigh	t				
SAO2	Building height does not exceed the maximum height identified on Overlay map - Building heights.				
Site cover	Site cover				
SAO3	SAO3 Site cover does not exceed 40%.				
Lighting					
SAO4	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the				
	recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.				
	Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.				
Car parking					

	On-site car parking is provided in accordance with Schedule 7 - Car parking.
Waste	
SAO6	Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.
Hazardous ch	emicals
SAO7	All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.1 Hazardous Chemicals Self-Assessable Thresholds complies with Schedule 9, Table 9.0.3 Hazardous Chemicals Self-Assessable Criteria.
SAO8	Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Development involving hazardous chemicals, Table 9.0.2 Hazardous Chemicals Assessable Thresholds.
Building on sl	oping land
SAO9	Building and site design on slope between 10% and 15%: a. use split-level, multiple-slab, pier or pole construction;
	b. avoid single-plane slabs and benching; and
	c. ensure the height of any cut or fill, whether retained or not, does not exceed 900mm. Note - This provision does not apply to outbuildings or any building works. Note - This provision does not apply where a development footprint exists for a lot.
Clearing of ha	bitat trees where not located in the Environmental areas overlay map
SAO10	 Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to: a. Clearing of a habitat tree located within an approved development footprint; b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency; c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure; d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
	 e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes; f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a
	suitably qualified person, submitted to and accepted by Council; g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;

	Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.
	Works criteria
Utilities	
SAO11	Where available, the development is connected to:
	a. an existing reticulated electricity supply;b. telecommunications and broadband;c. reticulated sewerage;
	d. reticulated water; e. constructed and dedicated road.
SAO12	Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility.
	Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code.
SAO13	Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development.
Access	
SAO14	Any new or changes to existing site access and driveways are designed and located in accordance with: a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or
	 a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
SAO15	Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.
Stormwater	
SAO16	Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design.
	Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.
SAO17	Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development:
	a. is for urban purposes only;

	 b. involves a land area greater than 2500m²; c. will result in 6 or more dwellings; OR will result in an impervious area greater than 25% of the net developable area.
Site works and	I construction management
SAO18	The site and any existing structures are to be maintained in a tidy and safe condition.
SAO19	Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design.
SAO20	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.
SAO21	All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.
SAO22	Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.
SAO23	Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
Earthworks	
SAO24	The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798. Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures The total of all cut and fill on-site does not exceed 900mm in height. Figure - Cut and fill Lot Boundaries Finished surface level Finished surface level Finished surface level Note - This is site earthworks not building work.
SAO26	Filling or excavation does not result in:

- a reduction in cover over any Council or public sector entity infrastructure to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.

Note - Public sector entity is defined in the Sustainable Planning Act 2009.

Fire services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or ii.

 - material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply: h
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection

SAO27

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005):

- in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks (84) or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
- in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - ii. - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 - for outdoor sales $^{(54)}$, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales $^{(54)}$, outdoor processing and outdoor storage facilities; and
- in regard to fire hydrant accessibility and clearance requirements Part 3.5 and where applicable, Part 3.6. d.

SAO28

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

	a. an unobstructed width of no less than 3.5m;
	b. an unobstructed height of no less than 4.8m;
	c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
	d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.
SAO29	On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.
SAO30	For development that contains on-site fire hydrants external to buildings: a. those external hydrants can be seen from the vehicular entry point to the site; or b. a sign identifying the following is provided at the vehicular entry point to the site: i. the overall layout of the development (to scale); ii. internal road names (where used):
	 ii. internal road names (where used); iii. all communal facilities (where provided); iv. the reception area and on-site manager's office (where provided); v. external hydrants and hydrant booster points; vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.
	Note - The sign prescribed above, and the graphics used are to be: a. in a form; b. of a size; c. illuminated to a level;
	which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.
SAO31	For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavements markers in the manner prescribed in the technical note <i>Fire hydrant indication system</i> produced by the Queensland Department of Transport and Main Roads. Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.
	Use specific criteria
Caretaker's ac	commodation ⁽¹⁰⁾
SAO32	Caretaker's accommodation ⁽¹⁰⁾ has a maximum GFA of 80m ² .

Use specific criteria			
Caretaker's ac	Caretaker's accommodation ⁽¹⁰⁾		
SAO32	Caretaker's accommodation ⁽¹⁰⁾ has a maximum GFA of 80m ² .		
SAO33	No more than 1 caretaker's accommodation (10) is established per site.		
SAO34	Does not gain access from a separate driveway to the main use on the site.		
SAO35	Includes a minimum 16m ² of private open space directly accessible from a habitable room.		

SAO36	Provide car parking in accordance with Schedule 7 - Car parking.		
Telecommunications facility ⁽⁸¹⁾			
that will not cau	n accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾ must be constructed and operated in a manner se human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic nan Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz		
SAO37	A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.		
SAO38	The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.		
SAO39	Equipment shelters and associated structures are located:		
	a. directly beside the existing equipment shelter and associated structures;		
	b. behind the main building line;		
	c. further away from the frontage than the existing equipment shelter and associated structures;		
	d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.		
SAO40	Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.		
SAO41	The facility is enclosed by security fencing or by other means to ensure public access is prohibited.		
SAO42	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced are between the development and street frontage and adjoining uses.		
	Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.		
	Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.		
SAO43	All equipment comprising the telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.		
	Values and constraints criteria		

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

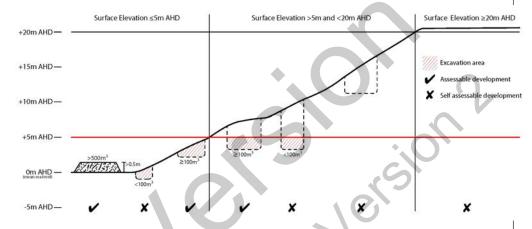

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

SAO44

Development does not involve:

- excavation or otherwise removing of more than 100m3 of soil or sediment where below 5m Australian Height Datum AHD, or
- filling of land of more than 500m3 of material with an average depth of 0.5m or greater where b. below the 5m AHD.

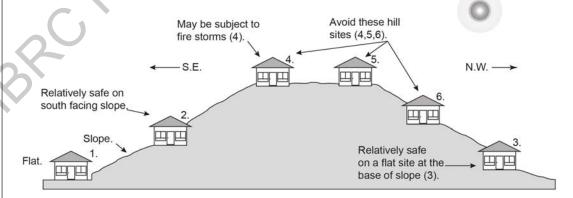

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - For the purposes of section 12 of the Building Regulation 2006, land identified as very high potential bushfire intensity, high potential bushfire intensity, medium potential bushfire intensity or potential impact buffer on the Bushfire hazard overlay map is the 'designated bushfire hazard area'. AS 3959-2009 Construction of buildings in bushfire hazard areas applies within these areas.

SAO45

- Building and structures are:
 - not located on a ridgeline
 - not located on land with a slope greater than 15% (see Overlay map Landslide hazard)
- Dwellings are located on east to south facing slopes.

House Sites Numbered in Order of Degree of Fire Safety

(1 being the safest, 6 being the most hazardous.) From Bushfire Prone Areas: Siting and Design of Residential Buildings (1997), Queensland Department of Local Government and Planning, and Queensland Fire & Rescue Service.

SAO46 Buildings and structures have contained within the site: a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater; a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater; a separation of no less than 10m between a fire fighting water supply extraction point and C. any classified vegetation, buildings and other roofed structures; d. an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%: i. to, and around, each building and other roofed structure; and ii. to each fire fighting water supply extraction point. Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959. **SAO47** The length of driveway: to a public road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road; has a maximum gradient no greater than 12.5%; b. have a minimum width of 3.5m; C. accommodate turning areas for fire fighting appliances in accordance with Qld Fire and d. Emergency Services' Fire Hydrant and Vehicle Access Guideline. **SAO48** A reticulated water supply is provided by a distributer retailer for the area or, where not a.ˈ connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is provided and located within 10m of buildings and structures. Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access to within 3m of that water storage source is provided. Where a tank is the nominated on-site fire fighting water storage source, it includes: a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank; fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 20mm (minimum) to accommodate suction lines. **SAO49** Development does not involve the manufacture or storage of hazardous chemicals.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note - The following are exempt from the native clearing provisions of this planning scheme:

Clearing of native vegetation located within an approved development footprint;

- h Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- C. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public e infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping g. land, windbreaks, lawns or created gardens;
- h Grazing of native pasture by stock;
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

SAO50

Where no suitable land cleared of native vegetation exists, clearing of native vegetation in a High Value Area or Value Area is for the purpose of a new dwelling house (22) or extension to an existing dwelling house⁽²²⁾ only on lots less than 750m².

Editor's note - See in heading above for other uses exempt from native vegetation clearing requirements.

Editor's note - Where self-assessable vegetation clearance is being undertaken, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:

- co-locating all associated activities, infrastructure and access strips;
- ii. be the least valued area of koala habitat on the site;
- minimise the footprint of the development envelope area; iii
- minimise edge effects to areas external to the development envelope; Ĭν.
- location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy - Environmental areas;
- sufficient area between the development and koala habitat trees to achieve their long-term viability. vi.

Editor's note - Where self-assessable vegetation clearing is being undertaken, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.

SAO51

No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Value Offset Area MLES - Wetland buffer.

This does not apply to the following:

- Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency:
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation C. poses to serious personal injury or damage to infrastructure;
- Clearing of native vegetation reasonably necessary to construct and maintain a property d. boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining g. existing open pastures and cropping land, windbreaks, lawns or created gardens;
- Grazing of native pasture by stock; h.
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development. i.

Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

SAO52

The following uses are not located within the 100m wide transport route buffer:

- Caretaker's accommodation⁽¹⁰⁾, except where located in the Extractive industry zone;
- Community residence⁽¹⁶⁾; b.
- Dual occupancy⁽²¹⁾; C.
- Dwelling house; (22) d.
- Dwelling unit (23) e.
- Hospital (36).
- Rooming accommodation (69)
- Multiple dwelling⁽⁴⁹⁾: h.
- Non-resident workforce accommodation (52);
- Relocatable home park (62);
- Residential care facility (65):
- Resort complex⁽⁶⁶⁾:
- Retirement facility (67);
- Rural workers' accommodation⁽⁷¹⁾; n.
- Short-term accommodation⁽⁷⁷⁾: Ο.
- Tourist park (84).

SAO53

Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.

SAO54

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

SAO55	Development is for the preservation, maintenance, repair and restoration of the site, object or building.
	This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.
	Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions
SAO56	A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.
	This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.
SAO57	Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.
SAO58	The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character: a. construction of any building; b. laying of overhead or underground services; c. any sealing, paving, soil compaction; d. any alteration of more than 75mm to the ground level prior to work commencing.
SAO59	Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.
Landslide haz	ard (refer Overlay map - Landslide hazard to determine if the following assessment criteria
apply)	
SAO60	Development does not:
	a. involve earthworks exceeding 50m³;
	b. involve cut and fill having a height greater than 600mm;
	c. involve any retaining wall having a height greater than 600mm;d. redirect or alter the existing flow of surface or groundwater.
SAO61	Buildings, excluding domestic outbuildings:
	a. are split-level, multiple-slab, pier or pole construction;b. are not single plane slab on ground.
SAO62	Development does not involve the manufacture, handling or storage of hazardous chemicals.
Infrastructure criteria apply)	buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment
SAO63	Development does not include the following uses within a Wastewater treatment site buffer:
	a. Caretaker's accommodation ⁽¹⁰⁾ ;
	b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ;
	S. Saa. Cocapancy ,

24004	d. Dwelling house; (22) e. Dwelling unit (23), f. Hospital (36); g. Rooming accommodation (69); h. Multiple dwelling (49); i. Non-resident workforce accommodation (52); j. Relocatable home park (62); k. Residential care facility (65); l. Resort complex (66); m. Retirement facility (67); n. Rural workers' accommodation (71); o. Short-term accommodation (77); p. Tourist park (84).	
SAO64	Development within a Water supply buffer does not include the incineration or burial of waste and all other waste is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.	
SAO65	Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.	
SAO66	Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things): a. buildings or structures; b. gates and fences; c. storage of equipment or materials; d. landscaping or earthworks or stormwater or other infrastructure.	
SAO67	On-site sewerage facilities in a Water supply buffer produce a minimum secondary treated effluent (90th percentile) and effluent application to ensure water quality is maintained and protected.	
SAO68	 On-site sewerage facilities in a Water supply buffer for a dwelling house⁽²²⁾ include: a. emergency storage capacity of 1,000 litres and adequate buffering for shock loading/down time; b. a reserve land application area of 100% of the effluent irrigation design area; c. land application areas that are vegetated; d. the base of the land application field is at least 2 metres above the seasonal high water table/bedrock (whichever is the closest to the base of the application area); e. wastewater collection and storage systems must have capacity to accommodate full load at peak times. 	
SAO69	On-site sewerage facilities in a Water supply buffer for development other than a dwelling house include emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies/overload with provision for de-sludging.	
SAO70	Development involving Permanent plantation ⁽⁵⁹⁾ within a Water supply buffer maintains a minimum of 30% ground cover at all times.	
SA071	Development does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer.	
SA072	Development involving a major hazard facility or an Environmentally Relevant Activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.	

SAO73 Development does not include the following uses located within a landfill site but			
	a. caretaker's accommodation ⁽¹⁰⁾ ;		
	b. community residence ⁽¹⁶⁾ ;		
	c. dual occupancy ⁽²¹⁾ ;		
	d. dwelling house; ⁽²²⁾		
	e. dwelling unit ⁽²³⁾ ; f. hospital ⁽³⁶⁾ ;		
	g. rooming accommodation ⁽⁶⁹⁾ ;		
	h. multiple dwelling ⁽⁴⁹⁾ ;		
	i. non-resident workforce accommodation ⁽⁵²⁾ ;		
j. relocatable home park ⁽⁶²⁾ ;			
	k. residential care facility ⁽⁶⁵⁾ ;		
	I. resort complex ⁽⁶⁶⁾ ; m. retirement facility ⁽⁶⁷⁾ ;		
	m. retirement facility ⁽⁰¹⁾ ; n. rural workers' accommodation ⁽⁷¹⁾ ;		
	o. short term accommodation (77);		
	p. tourist park ⁽⁸⁴⁾ .		
SAO74	Development does not involve the construction of any buildings or structures containing habitable rooms or sensitive land uses within a High voltage electricity line buffer.		
Overland flow	path (refer Overlay map - Overland flow path to determine if the following assessment criteria		
apply)			
SA075	Development for a material change of use or building work does not involve the construction of a		
	building or structure in an Overland flow path area.		
SAO76	Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises.		
	Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.		
•	Note Described to be seen and in second and with Discrimental and a second first Discrimental and		
	Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow		
SA077	Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.		
SAO78	Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.		
SAO79	Development for a material change of use or building work for a Park ⁽⁵⁷⁾ ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.		
•	vetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the ssment criteria apply)		
Note - W1, W2 an wetland setbacks.	d W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and		
SAO80	No development is to occur within:		
	a. 50m from top of bank for W1 waterway and drainage line		

- b. 30m from top of bank for W2 waterway and drainage line
- 20m from top of bank for W3 waterway and drainage line C.
- d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps - Riparian and wetland setbacks.

Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.

Note - The minimum setback distance applies to the each side of waterway.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code

Part H — Criteria for assessable development - Special use precinct

Where development is code assessable development in the Table of Assessment, the assessment criteria for that development are set out in Part H, Table 6.2.2.5.2.

Where development is impact assessable, the assessment criteria becomes the whole of the planning scheme.

Table 6.2.2.5.2 Assessable development - Special use precinct

Perf	formance outcomes	Acceptable outcomes				
	Genera	al criteria				
Buil	Built form and design outcomes for all development					
P01		AO1				
Build	dings and structures are of a height, scale and bulk ch:	Building height does not exceed the maximum height identified on Overlay map - Building heights.				
а.	is visually compatible with existing buildings or structures;					
b.	is consistent with existing amenity and character and does not appear overbearing, visually dominant or out of character with the surrounding environment;					
C.	minimises the visual impact of large-scale built form;					

- d. does not result in an adverse impact of visual amenity, privacy or impinge upon the receipt of natural sunlight or outlook;
- is designed in accordance with the principles of Crime Prevention Through Environment Design (CPTED) to achieve a high level of safety, surveillance and security.

PO₂

Buildings and structures are designed and constructed

- a. incorporate a mix of colours and high quality materials to add diversification to treatments and finishes:
- avoid blank walls through façade articulation to b. create visual interest and deter graffiti and vandalism:
- C. activate and address the street, public area or public open space;
- d. reduce cluttering of plant and equipment on building roofs.

AO2.1

Development provides materials and finishes of a high quality that are not susceptible to stain, discolour or deterioration.

AO2.2

Development incorporates articulated walls with variation, detail and colour to reduce the bulk and impact of development and minimise expansive blank walls.

AO2.3

The main facade of the building directly addresses and faces the street and contains a mix of materials and colours.

AO2.4

Building utilities such as lift motor rooms and telecommunications equipment are designed to be visually integrated with the building.

PO₃

Development will:

- maintain a balance area of the site that is open and uncluttered by building and structures;
- ensure that buildings and structures are not overbearing, visually dominant or out of character with the surrounding built environment nor detract from the amenity of adjoining land.

AO₃

Site cover of all buildings and structures does not exceed 40%.

Building setbacks

PO4

Building setback:

- is sufficient to minimise overlooking and maintain privacy of adjoining properties;
- b. is sufficient to ensure development is not visually dominant or overbearing on adjoining properties.

AO4

Buildings and structures are setback as follows

- road frontage 6m a.
- b. side boundary - 3m
- rear boundary 3m C.

Building on sloping land between 10% and 15%

PO5

On slopes between 10% and 15%, building and site design must achieve the following:

- use split-level, multiple-slab, pier or pole construction:
- b. avoid single-plane slabs and benching;
- ensure the height of any cut or fill, whether C. retained or not, does not exceed 900mm;
- d. minimise any visual impact on the landscape character; and
- e. protect the amenity of adjoining properties.

AO5

Building and site design on slopes between 10% and 15%;

- use split-level, multiple-slab, pier or pole construction:
- avoid single-plane slabs and benching; and b.
- C. ensure the height of any cut or fill, whether retained or not, does not exceed 900mm.

Personal and property safety

PO6

Buildings and spaces are designed and constructed to create a safe and secure environment by incorporating key crime prevention through environmental design principles, including:

- casual surveillance opportunities and sight lines; a.
- way-finding cues and signage; b.
- defined different uses and private and public C. ownership through adequate fencing and signage;
- light illuminates pathways and potential entrapment areas as well as maximising opportunities for penetration of natural light into spaces;
- minimise predictable routes and entrapment locations.

No acceptable outcome provided.

Amenity

PO7

The amenity of the area and adjacent sensitive land uses are protected from the impacts of dust, odour, light, chemicals and other environmental nuisances. No acceptable outcome provided.

Hazardous chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO8

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

AO8.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2;
 - An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- For any hazard scenario involving fire or explosion:
 - 7kPa overpressure;
 - 4.7kW/m2 heat radiation.

If criteria AO8.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.

AO8.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2; i.
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - 4.7kW/m2 heat radiation.

If criteria AO8.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.

AO8.3

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - AEGL2 (60minutes) or if not available ERPG2;
 - An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- For any hazard scenario involving fire or explosion:
 - 14kPa overpressure;
 - 12.6kW/m2 heat radiation

If criteria AO8.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.

PO9

Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.

AO9

Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.

PO10

Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.

AO10

Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.

PO11

Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.

AO11.1

The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively:

- bulk tanks are anchored so they cannot float if submerged or inundated by water; and
- tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.

AO11.2

The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

Car parking

PO12

Traffic generation, vehicle movement and on-site car parking associated with an activity:

- provides safe, convenient and accessible access a. for vehicles and pedestrians;
- b. provides safe and convenient on-site parking and manuoevring to meet anticipated parking demand;
- is appropriate to the road classification and carrying capacity of the local network and able to meet the additional demands generated by the development;
- d. does not result adverse impacts on the efficient and safe functioning of the road network.

Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.

AO12

On-site car parking is provided in accordance with Schedule 7 - Car parking.

Bicycle parking and end of trip facilities

Note - Building work to which this code applies constitutes Major Development for purposes of development requirements for end of trip facilities prescribed in the Queensland Development Code MP 4.1.

PO13

- End of trip facilities are provided for employees or a. occupants, in the building or on-site within a reasonable walking distance, and include:
 - adequate bicycle parking and storage facilities; and

AO13.1

Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable

- ii. adequate provision for securing belongings; and
- iii. change rooms that include adequate showers, sanitary compartments, wash basins and mirrors.
- b. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to:
 - the projected population growth and forward i. planning for road upgrading and development of cycle paths; or
 - ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain: or
 - iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the acceptable outcomes under this heading meet the current performance requirement prescribed in the Queensland Development Code.

outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO13.2

Bicycle parking is:

- provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking;
- protected from the weather by its location or a dedicated roof structure;
- located within the building or in a dedicated, secure C. structure for residents and staff;
- adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO13.3

For non-residential uses, storage lockers:

- are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);
- have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO13.4

For non-residential uses, changing rooms:

- are provided at a rate of 1 per 10 bicycle parking
- b. are fitted with a lockable door or otherwise screened from public view;
- are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

Bicycle spaces provided	Male/ Female	Change rooms required	Showers required	Sanitary compartments required	Washbasins required
1-5	Male and female	1 unisex change room	1	1 closet pan	1
6-19	Female	1	1	1 closet pan	1
20 or more	Male	1	1	1 closet pan	1
	Female	1	2, plus 1 for every 20 bicycle spaces provided thereafter	2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter	1, plus 1 for every 60 bicycle parking spaces provided thereafter
S	Male		2, plus 1 for every 20 bicycle spaces provided thereafter	1 urinal and 1 closet pans, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter	1, plus 1 for every 60 bicycle parking spaces provided thereafter

Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head.

Note - All sanitary compartments are constructed in compliance with F2.3 (e) and F2.5 of BCA (Volume 1).

- d. are provided with:
 - a mirror located above each wash basin;
 - a hook and bench seating within each shower compartment;
 - a socket-outlet located adjacent to each wash iii. basin.

Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

Landscaping and screening

PO14

Landscaping and screening is provided in a manner that:

- achieves a high level of privacy and amenity to sensitive land uses on adjoining properties and when viewed from the street:
- b. reduces the visual impact of building bulk and presence and hard surface areas on the local character and amenity of adjoining sensitive land uses and from the street;
- creates a secure and safe environment by incorporating key elements of crime prevention through environmental design;
- d. achieves the design principles outlined in Planning scheme policy - Integrated design.

No acceptable outcome provided.

Loading and servicing

PO15

Loading and servicing areas:

- are not visible from the street frontage; a.
- b. are integrated into the design of the building;
- C. include screening and buffers to reduce negative impacts on adjoining sensitive land uses;
- where possible loading and servicing areas are d. consolidated and shared with adjoining sites.

No acceptable outcome provided.

Waste

PO16

Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy Waste.

No acceptable outcome provided.

Noise

PO17

Noise generating uses do not adversely affect existing noise sensitive uses.

Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.

No acceptable outcome provided.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

PO18

Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:

- contributing to safe and usable public spaces, a. through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc);
- maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

AO18.1

Development is designed to meet the criteria outlined in the Planning Scheme Policy - Noise.

AO18.2

Noise attenuation structures (e.g. walls, barriers or fences):

- are not visible from an adjoining road or public area unless:
 - adjoining a motorway or rail line; or
 - adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- do not remove existing or prevent future active transport routes or connections to the street network;
- are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map - Active transport for future active transport routes.

Clearing of habitat trees where not located within the Environmental areas overlay map

PO19

- Development ensures that the biodiversity quality a. and integrity of habitats is not adversely impacted upon but maintained and protected.
- Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.
- Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner

No acceptable outcome provided

Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas Works criteria **Utilities PO20** No acceptable outcome provided Where the site adjoins or is opposite to a Park (57) foreshore or Humpybong Reserve all existing overhead power lines are to be undergrounded for the full frontage of the site. **PO21 AO21** The development is connected to an existing reticulated Development is connected to underground electricity. electricity supply system approved by the relevant energy regulating authority. **PO22** No acceptable outcome provided The development has access to telecommunications and broadband services in accordance with current standards. **PO23** No acceptable outcome provided Where available the development is to safely connect to reticulated gas. **PO24** AO24.1 The development provides for the treatment and Where in a sewered area, the development is connected disposal of sewage and other waste water in a way that to a reticulated sewerage network. will not cause environmental harm or pose a risk to public health. AO24.2 Where not in a sewered area, the development is serviced by an appropriate on-site sewerage facility. Note - A site and soil evaluation report is generally required to demonstrate compliance with this outcome. Reports are to be prepared in accordance with AS1547 On-site domestic wastewater management and the Queensland Plumbing and Wastewater Code. AO24.3 Trade waste is pre-treated on-site prior to discharging into the sewerage network. **PO25** AO25.1

The development is provided with an adequate and Where in an existing connections area or a future sustainable supply of potable (drinking and general use connections area as detailed in the Unitywater e.g. gardening, washing, fire fighting) water. Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards. AO25.2 Where not in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is provided with an adequate water supply of 45,000 litres by way of on-site storage which provides equivalent water quality and reliability to support the use requirements of the development. **PO26** No acceptable outcome provided The development is provided with constructed and dedicated road access. **Access PO27** No acceptable outcome provided Development provides functional and integrated car parking and vehicle access, that: prioritises the movement and safety of pedestrians between car parking areas at the rear through to the 'main street' and the entrance to the building (e.g. rear entry, arcade etc.); provides safety and security of people and property at all times; does not impede active transport options; does not impact on the safe and efficient movement of traffic external to the site; where possible vehicle access points are e. consolidated and shared with adjoining sites. Note - Refer to Planning scheme policy - Centre and neighbourhood hub design for details and examples. **PO28** No acceptable outcome provided Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design. AO29.1 **PO29**

The layout of the development does not compromise:

- the development of the road network in the area;
- b. the function or safety of the road network;
- the capacity of the road network. C.

Note - The road hierarchy is mapped on Overlay map - Road hierarchy.

Direct vehicle access for residential development does not occur from arterial or sub-arterial roads or a motorway.

Editor's note - Residential developments should consider amalgamation with the lot to the rear and gaining access via a laneway.

Note - The road hierarchy is mapped on Overlay map - Road

AO29.2

The development provides for the extension of the road network in the area in accordance with Council's road network planning.

AO29.3

The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.

AO29.4

The lot layout allows forward access to and from the site.

PO30

Safe access is provided for all vehicles required to access the site.

AO30.1

Site access and driveways are designed and located in accordance with:

- Where for a Council-controlled road, AS/NZS2890.1 a. section 3; or
- Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

AO30.2

Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.

AO30.3

Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.

PO31

Upgrade works (whether trunk or non-trunk) are provided where necessary to:

- ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network;
- b. ensure the orderly and efficient continuation of the active transport network;
- ensure the site frontage is constructed to a suitable C. urban standard generally in accordance with Planning scheme policy - Integrated design.

Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.

Note - The road network is mapped on Overlay map - Road hierarchy.

Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.

Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:

- Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or
- Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.

Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.

No acceptable outcome provided

Stormwater

PO32

Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.

Note - Refer to Planning scheme policy - Integrated design for details.

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome. No acceptable outcome provided

Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.	
PO33	No acceptable outcome provided
Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site. Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be	
required to demonstrate achievement of this performance outcome.	
PO34	No acceptable outcome provided
Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP. Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.	Scheille
PO35	No acceptable outcome provided
 Easements for drainage purposes are provided over: a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm; b. overland flow paths where they cross more than one property boundary. Note - Refer to Planning scheme policy - Integrated design for details. Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM. 	
Site works and construction management	
PO36	No acceptable outcome provided
The site and any existing structures are maintained in a tidy and safe condition.	
PO37	AO37.1

All works on-site are managed to:

- minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light;
- minimise as far as possible, impacts on the natural b. environment:
- C. ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises;
- d. avoid adverse impacts on street trees and their critical root zone.

Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following:

- stormwater is not discharged to adjacent properties a. in a manner that differs significantly from pre-existing conditions:
- stormwater discharged to adjoining and downstream b. properties does not cause scour and erosion;
- C. stormwater discharge rates do not exceed pre-existing conditions;
- d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and
- the 50% AEP storm event is the minimum design. storm for all silt barriers and sedimentation basins.

AO37.2

Stormwater runoff, erosion and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.

Note - The measures are adjusted on-site to maximise their effectiveness.

AO37.3

The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

AO37.4

Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.

PO38

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.

AO38

No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

PO39

All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.

AO39.1

Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.

Note - Where the amount of imported or exported material is greater than 50m3, a haulage route must be identified and approved by Council.

AO39.2

All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.

Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).

AO39.3

Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.

PO40

All disturbed areas are rehabilitated at the completion of construction.

Note - Refer to Planning scheme policy - Integrated design for details.

AO40

At completion of construction all disturbed areas of the site are to be:

- topsoiled with a minimum compacted thickness of fifty (50) millimetres;
- grassed. b.

Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

PO41

The clearing of vegetation on-site:

- is limited to the area of infrastructure works, building areas and other necessary areas for the works; and
- includes the removal of declared weeds and other b. materials which are detrimental to the intended use of the land:
- is disposed of in a manner which minimises C. nuisance and annoyance to existing premises.

Note - No burning of cleared vegetation is permitted.

AO41.1

All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.

Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.

AO41.2

Disposal of materials is managed in one or more of the following ways:

- all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility;
- all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.

PO42

No acceptable outcome provided

Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.

Earthworks

PO43

On-site earthworks are designed to consider the visual and amenity impact as they relate to:

- the natural topographical features of the site; a.
- b. short and long-term slope stability;
- soft or compressible foundation soils; C.
- d. reactive soils:
- low density or potentially collapsing soils; e.
- f. existing fill and soil contamination that may exist on-site;
- the stability and maintenance of steep rock slopes g. and batters;
- h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential).

Note - Filling or excavation works are to be completed within six months of the commencement date.

AO43.1

All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.

AO43.2

Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.

AO43.3

Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.

AO43.4

All filling or excavation is contained on-site.

AO43.5

All fill placed on-site is:

- limited to that required for the necessary approved use:
- clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

AO43.6

The site is prepared and the fill placed on-site in accordance with AS3798.

Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

PO44

AO44

Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.

Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.

Figure - Embankment

PO45

Filling or excavation is undertaken in a manner that:

- does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land;
- h. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes.

Note - Public sector entity as defined in the Sustainable Planning Act 2009.

AO45.1

No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.

Note - Public sector entity as defined in the Sustainable Planning Act

AO45.2

Filling or excavation that would result in any of the following is not carried out on-site:

- a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;
- an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.

Note - Public sector entity as defined in the Sustainable Planning Act 2009

PO46

Filling or excavation does not result in land instability.

Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance

No acceptable outcome provided

PO47

Development does not result in

- adverse impacts on the hydrological and hydraulic a. capacity of the waterway or floodway;
- b. increased flood inundation outside the site;
- any reduction in the flood storage capacity in the C.
- d. and any clearing of native vegetation.

Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy No acceptable outcome provided.

- Integrated design for guidance on infrastructure design and modelling requirements.

Retaining walls and structures

PO48

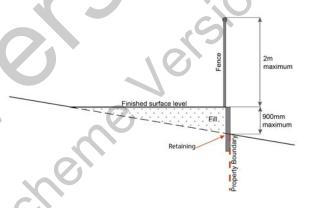

All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.

AO48

Earth retaining structures:

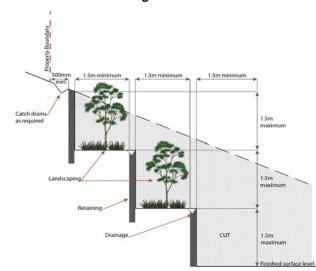

- are not constructed of boulder rocks or timber;
- where height is no greater than 900mm, are provided b. in accordance with Figure - Retaining on a boundary;

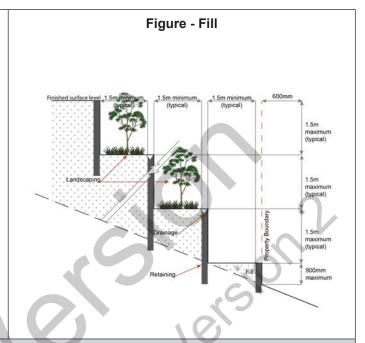

Figure - Retaining on boundary

- where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent height of the retaining structure from any property boundary;
- where height is greater than 1.5m, are to be setback and stepped 1.5m vertical: 1.5m horizontal, terraced, landscaped and drained as shown below.

Figure - Cut

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates:
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park (84) with accommodation in the form of caravans or tents; or
 - iii.
 - material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.

AND

- none of the following exceptions apply:
 - the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
 - every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO49

Development incorporates a fire fighting system that:

- satisfies the reasonable needs of the fire fighting a. entity for the area;
- b. is appropriate for the size, shape and topography of the development and its surrounds;
- is compatible with the operational equipment C. available to the fire fighting entity for the area;
- d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;

AO49.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations.

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks $^{(84)}$ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

- e. considers the fire hazard inherent in the surrounds to the development site;
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

- in regard to the general locational requirements for fire hydrants h - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 - for outdoor sales (54), processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales (54), outdoor processing and outdoor storage facilities;
- in regard to fire hydrant accessibility and clearance d. requirements - Part 3.5 and, where applicable, Part 3.6.

AO49.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- an unobstructed width of no less than 3.5m;
- an unobstructed height of no less than 4.8m; b.
- constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO49.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) - Routine service of fire protection systems and equipment.

PO50

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.

AO50

For development that contains on-site fire hydrants external to buildings:

- those external hydrants can be seen from the a. vehicular entry point to the site; or
- a sign identifying the following is provided at the vehicular entry point to the site:
 - the overall layout of the development (to scale);
 - internal road names (where used);
 - iii. all communal facilities (where provided);
 - the reception area and on-site manager's office iν. (where provided);

- external hydrants and hydrant booster points; ٧.
- physical constraints within the internal roadway vi. system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.

Note - The sign prescribed above, and the graphics used are to be:

- а in a form:
- b. of a size:
- illuminated to a level

which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the

PO51

Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.

AO51

For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note Fire hydrant indication system produced by the Queensland Department of Transport and Main Roads.

Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Use specific criteria

Caretaker's accommodation (10)

PO52

Development for a Caretaker's accommodation (10):

- does not compromise the productivity of the use; a.
- is domestic in scale; b.
- provides adequate car parking provisions exclusive C. to the primary use of the site;
- is safe for the residents: d.
- has regards to the landscape and private recreation needs of the resident.

AO52

Caretaker's accommodation (10):

- has a maximum GFA of 80m2;
- no more than 1 caretaker's accommodation (10) is established per site;
- 3. does not gain access from a separate driveway to the main use on the site:
- 4. provides a minimum 16m² of private open space directly accessible from a habitable room;
- 5. provides car parking in accordance with Schedule 7 - Car parking.

Major electricity infrastructure⁽⁴³⁾, Substation⁽⁸⁰⁾ and Utility installation⁽⁸⁶⁾

PO53

The development does not have an adverse impact on the visual amenity of a locality and is:

- high quality design and construction; a.
- b. visually integrated with the surrounding area;
- not visually dominant or intrusive; C.
- located behind the main building line; d.
- below the level of the predominant tree canopy or e. the level of the surrounding buildings and structures;
- f. camouflaged through the use of colours and materials which blend into the landscape;
- treated to eliminate glare and reflectivity; g.
- landscaped; h.
- i. otherwise consistent with the amenity and character of the zone and surrounding area.

AO53.1

Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment:

- are enclosed within buildings or structures;
- are located behind the main building line; b.
- have a similar height, bulk and scale to the C. surrounding fabric;
- have horizontal and vertical articulation applied to d. all exterior walls.

AO53.2

A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.

PO54

Infrastructure does not have an impact on pedestrian health and safety.

AO54

Access control arrangements:

- do not create dead-ends or dark alleyways adjacent to the infrastructure:
- minimise the number and width of crossovers and entry points;
- provide safe vehicular access to the site;
- do not utilise barbed wire or razor wire.

PO55

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility:

- generates no audible sound at the site boundaries where in a residential setting; or
- meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

AO55

All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.

Market (46)

PO56

Markets⁽⁴⁶⁾ are located and laid out in a manner that provides for:

- convenient pedestrian access and movement a. between proposed stalls;
- b. view corridors and legibility between stalls to adjacent roads,
- directional and information signage and C. surrounding uses;
- pedestrian comfort and safety, including the d. provision of public toilet facilities;

No acceptable outcome provided.

- waste and rubbish disposal facilities appropriate to the type and scale of the proposed market (46);
- emergency vehicle access to and within the f. market⁽⁴⁶⁾:
- safe, convenient and accessible car parking is g. provided to meet demand.

Telecommunications facility (81)

Editor's note - In accordance with the Federal legislation Telecommunications facilities (81) must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz

PO57

Telecommunications facilities⁽⁸¹⁾ are co-located with existing telecommunications facilities⁽⁸¹⁾, Utility installation⁽⁸⁶⁾, Major electricity infrastructure⁽⁴³⁾ or Substation⁽⁸⁰⁾ if there is already a facility in the same coverage area.

AO57.1

New telecommunication facilities (81) are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.

AO57.2

If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.

PO58

A new Telecommunications facility (81) is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.

AO58

A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.

PO59

Telecommunications facilities (81) do not conflict with lawful existing land uses both on and adjoining the site.

AO59

The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

PO60

The Telecommunications facility⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is:

- high quality design and construction; a.
- b. visually integrated with the surrounding area;
- not visually dominant or intrusive; C.
- d. located behind the main building line;

AO60.1

Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.

AO60.2

In all other areas towers do not exceed 35m in height.

- below the level of the predominant tree canopy or the level of the surrounding buildings and structures:
- f. camouflaged through the use of colours and materials which blend into the landscape;
- treated to eliminate glare and reflectivity; g.
- h. landscaped;
- otherwise consistent with the amenity and i. character of the zone and surrounding area.

AO60.3

Towers, equipment shelters and associated structures are of a design, colour and material to:

- reduce recognition in the landscape;
- b. reduce glare and reflectivity.

AO60.4

All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Where there is no established building line the facility is located at the rear of the site.

AO60.5

The facility is enclosed by security fencing or by other means to ensure public access is prohibited.

AO60.6

A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.

Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.

Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.

PO61

Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.

AO61

An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.

PO62

All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.

AO62

All equipment comprising the Telecommunications facility (81) which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.

Tourist park (84)

PO63

Development associated with a tourist park (84):

No acceptable outcome provided.

- is of a size, scale, intensity and design that minimises the potential for adverse noise, visual, privacy and traffic impacts on adjoining or nearby residents;
- provides suitable open space, buildings and facilities that meet the recreational, social and amenity needs of people staying on-site;
- provides landscape buffer along adjoining property boundaries to fully screen activities occurring on the site.

Transport depot (85)

PO64

Development is located on a site of sufficient size to

- the scale and intensity of the development does a. not result in adverse visual or nuisance impacts on the residents in adjoining or nearby dwellings;
- vehicular and pedestrian traffic generation consistent with that reasonably expected in the surrounding locality.

AO64.1

Development, including all vehicle parking, drive way areas and storage areas, is set back 30m from all property boundaries.

AO64.2

The maximum number of heavy vehicles, trailers and motor vehicles stored on-site is as follows:

- 4 heavy vehicles
- 4 trailers
- 6 motor vehicles.

PO65

Development is suitably screened to ensure adverse visual impacts on the residents in adjoining or nearby dwellings are minimised.

AO65

Vehicle parking areas, vehicle standing areas and outdoor storage areas of plant and equipment are screened from adjoining sites by either planting, wall(s), fence(s) or a combination to at least 1.8m in height along the length of those areas.

Planting for screening is to have a minimum depth of 3m.

Values and constraints criteria

Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

PO66 AO66 Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:

- is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment:
- b. protects the environmental and ecological values and health of receiving waters;
- protects buildings and infrastructure from the C. effects of acid sulfate soils.

Development does not involve:

- excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or
- filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Bushfire hazard (refer Overlay map - Bushfire hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a bushfire management plan is prepared by a suitably qualified person. Guidance for the preparation of a bushfire management plan is provided in Planning scheme policy - Bushfire prone areas.

Note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

PO67

Development:

- minimises the number of buildings and people working and living on a site exposed to bushfire
- ensures the protection of life during the passage b. of a fire front;
- is located and designed to increase the chance of survival of buildings and structures during a
- minimises bushfire risk from build up of fuels d. around buildings and structures;
- ensure safe and effective access for emergency services during a bushfire.

AO67.1

Buildings and structures are:

- not located on a ridgeline;
- not located on land with a slope greater than 15% (see Overlay map - Landslide hazard);
- dwellings are located on east to south facing slopes.

AO67.2

Buildings and structures have contained within the site:

- a separation from classified vegetation of 20m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation from low threat vegetation of 10m or the distance required to achieve a bushfire attack level (BAL) at the building, roofed structure or fire fighting water supply of no more than 29, whichever is the greater;
- a separation of no less than 10m between a fire fighting water supply extraction point and any classified vegetation, buildings and other roofed
- an area suitable for a standard fire fighting appliance to stand within 3m of a fire fighting water supply extraction point; and
- an access path suitable for use by a standard fire fighting appliance having a formed width of at least 4m, a cross-fall of no greater than 5%, and a longitudinal gradient of no greater than 25%:

- i. to, and around, each building and other roofed structure; and
- ii. to each fire fighting water supply extraction point.

Note - The meaning of the terms classified vegetation and low threat vegetation as well as the method of calculating the bushfire attack level are as described in Australian Standard AS 3959

PO68

Development and associated driveways and access

- avoid potential for entrapment during a bushfire; a.
- ensure safe and effective access for emergency b. services during a bushfire;
- C. enable safe evacuation for occupants of a site during a bushfire.

AO68

A length of driveway:

- to a road does not exceed 100m between the most distant part of a building used for any purpose other than storage and the nearest part of a public road;
- has a maximum gradient no greater than 12.5%;
- have a minimum width of 3.5m;
- accommodate turning areas for fire fighting appliances in accordance with Qld Fire and Emergency Services' Fire Hydrant and Vehicle Access Guideline.

PO69

Development provides an adequate water supply for fire-fighting purposes.

AO69

- a reticulated water supply is provided by a distributer retailer for the area or;
- where not connected to a reticulated water supply, on-site fire fighting water storage containing not less than 10 000 litres (tanks with fire brigade tank fittings, swimming pools) is located within 10m of buildings and structures.
- Where a swimming pool is the nominated on-site fire fighting water storage source, vehicle access is provided to within 3m of that water storage source.
- Where a tank is the nominated on-site fire fighting water storage source, it includes:
 - a hardstand area allowing medium rigid vehicles (15 tonne fire appliance) access within 6m of the tank;
 - fire brigade tank fittings, comprising 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines.

PO70

Development:

- does not present unacceptable risk to people or environment due to the impact of bushfire on dangerous goods or combustible liquids;
- does not present danger or difficulty to emergency b. services for emergency response or evacuation.

AO70

Development does not involve the manufacture or storage of hazardous chemicals.

Editor's note - Unacceptable risk is defined as a situation where people or property are exposed to a predictable hazard event that may result in serious injury, loss of life, failure of community infrastructure, or property damage.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

Note – The following are exempt from the native vegetation clearing provisions of this planning scheme:

- Clearing of native vegetation located within an approved development footprint; а
- Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately h required in response to an accident or emergency;
- Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage C. to infrastructure:
- Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public e. infrastructure or drainage purposes;
- Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to f. and accepted by Council;
- Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping g. land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- Native forest practice where exempt under Part 1, 1.7.7 Exempt development

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Note - To demonstrate achievement of the performance outcome, an ecological assessment, vegetation management plan and fauna management plan, as required, are prepared by a suitably qualified person. Guidance for the preparation of above mentioned reports is provided in Planning scheme policy - Environmental areas.

Vegetation clearing, ecological value and connectivity

PO71

Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:

the quality and integrity of the biodiversity and ecological values inherent to a High Value Area No acceptable outcome provided.

- and a Value Offset Area is maintained and not lost or degraded;
- on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental
- * Editor's note This is not a requirement for an environmental offset under the Environmental Offsets Act 2014

No acceptable outcome provided.

PO72

Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:

- a. retaining habitat trees;
- providing contiguous patches of habitat; b.
- provide replacement and rehabilitation planting to C. improve connectivity;
- avoiding the creation of fragmented and isolated d. patches of habitat;
- providing wildlife movement infrastructure. e.

Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental

Vegetation clearing and habitat protection

PO73

Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.

No acceptable outcome provided.

PO74

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:

rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area;

No acceptable outcome provided.

b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; undertake rehabilitation, revegetation and C. restoration in accordance with the South East Queensland Ecological Restoration Framework. **PO75** No acceptable outcome provided. Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by: providing contiguous patches of habitat; a. avoiding the creation of fragmented and isolated b. patches of habitat; providing wildlife movement infrastructure; C. providing replacement and rehabilitation planting to improve connectivity. Vegetation clearing and soil resource stability **PO76** No acceptable outcome provided. Development does not: result in soil erosion or land degradation; leave cleared land exposed for an unreasonable b. period of time but is rehabilitated in a timely manner. Vegetation clearing and water quality **PO77** No acceptable outcome provided. Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by: ensuring an effective vegetated buffers and a. setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads; avoiding or minimising changes to landforms to b. maintain hydrological water flows; adopting suitable measures to exclude livestock C. from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities. **PO78** No acceptable outcome provided. Development minimises adverse impacts of stormwater run-off on water quality by: minimising flow velocity to reduce erosion; a. b. minimising hard surface areas; C. maximising the use of permeable surfaces: d. incorporating sediment retention devices; minimising channelled flow.

Vegetation clearing and access, edge effects and urban heat island effects

PO79

Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.

No acceptable outcome provided.

PO80

Development minimises potential adverse 'edge effects' on ecological values by:

- providing dense planting buffers of native а vegetation between a development and environmental areas:
- b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas;
- restoring, rehabilitating and increasing the size of C. existing patches of native vegetation;
- d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors:
- landscaping with native plants of local origin. e.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.

No acceptable outcome provided.

PO81

Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:

- pervious surfaces; a.
- providing deeply planted vegetation buffers and b. green linkage opportunities;
- landscaping with local native plant species to C. achieve well-shaded urban places;
- increasing the service extent of the urban forest d.

No acceptable outcome provided.

Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets

PO82

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.

Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.

No acceptable outcome provided.

Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) to determine if the following assessment criteria apply)

PO83

Development:

- does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route:
- b. does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes;
- adopts design and location measures to C. satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to:
 - i. locating the furthest distance possible from the transportation route;
 - ii. habitable rooms being located the furthest from the transportation route;
 - shielding and screening private outdoor iii. recreation space from the transportation routes.

AO83

The following uses are not located within the 100m wide transport route buffer:

- Caretaker's accommodation⁽¹⁰⁾, except where a. located in the Extractive industry zone;
- Community residence (16). b.
- Dual occupancy⁽²¹⁾; C.
- Dwelling house (22); d.
- Dwelling unit⁽²³⁾: e.
- Hospital (36): f.
- Rooming accommodation (69) g.
- Multiple dwelling (49): h.
- Non-resident workforce accommodation (52); i.
- Relocatable home park (62): j.
- Residential care facility (65): k.
- Resort complex⁽⁶⁶⁾: ١.
- Retirement facility (67) m.
- Rural workers' accommodation⁽⁷¹⁾; n.
- Short-term accommodation⁽⁷⁷⁾; 0.
- Tourist park (84). p.

PO84

Development:

- does not adversely impact upon the efficient and a. effective transportation of extractive material along a transportation route:
- ensures vehicle access and egress along b. transportation routes are designed and located to achieve a high degree of safety, having good visibility;
- utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.

AO84.1

Development does not create a new vehicle access point onto an Extractive resources transport route.

AO84.2

A vehicle access point is located, designed and constructed in accordance with Planning scheme policy -Integrated design.

Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply)

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy - Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO85

Development will:

- not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- b. protect the fabric and setting of the heritage site, object or building;
- be consistent with the form, scale and style of the C. heritage site, object or building;
- utilise similar materials to those existing, or where d. this is not reasonable or practicable, neutral materials and finishes;
- incorporate complementary elements, detailing e. and ornamentation to those present on the heritage site, object or building;
- f. retain public access where this is currently provided.

AO85

Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.

Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.

PO86

Demolition and removal is only considered where:

- a report prepared by a suitably qualified a. conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or
- b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or
- C. limited demolition is performed in the course of repairs, maintenance or restoration; or
- demolition is performed following a catastrophic d. event which substantially destroys the building or object.

No acceptable outcome provided.

PO87

Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.

No acceptable outcome provided.

PO88

Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.

880A

Development does:

- not result in the removal of a significant tree; a.
- not occur within 20m of a protected tree: b.
- involve pruning of a tree in accordance with C. Australian Standard AS 4373-2007 - Pruning of Amenity Trees.

Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.

Landslide hazard (refer Overlay map - Landslide hazard to determine if the following assessment criteria apply)

Note - To demonstrate achievement of the performance outcomes, a site-specific geotechnical assessment report is prepared by a qualified engineer. Guidance for the preparation of a geotechnical assessment report is provided in Planning scheme policy - Landslide hazard.

PO89

Development:

- maintains the safety of people and property on a site and neighbouring sites from landslides;
- b. ensures the long-term stability of the site. considering the full nature and end use of the development;
- ensures site stability during all phases of C. construction and development;
- minimises disturbance of natural drainage patterns d. of the site and does not result in the redirection or alteration of the existing flow if surface or groundwater
- minimises adverse visual impacts on the amenity of adjoining residents and provides a positive interface with the streetscape.

AO89

Development does not:

- involve earthworks exceeding 50m3;
- involve cut and fill having a height greater than 600mm:
- C. involve any retaining wall having a height greater than 600mm;
- d. redirect or alter the existing flow of surface or groundwater.

PO90

Buildings are designed to respond to sloping topography in the siting, design and form of buildings and structures by:

- minimising overuse of cut and fill to create single a. flat pads and benching;
- avoiding expanses of retaining walls, loss of trees b. and vegetation and interference with natural drainage systems;
- minimising any adverse visual impact on the C. landscape character;
- d. Protect the amenity of adjoining properties.

AO90

Buildings, excluding domestic outbuildings:

- are split-level, multiple-slab, pier or pole construction;
- are not single plane slab on ground. b.

PO91

Development protects the safety of people, property and the environment from the impacts of landslide on hazardous chemicals manufactured, handled or stored by incorporating design measures to ensure:

the long-term stability of the development site considering the full nature and end use of the development;

AO91

Development does not involve the manufacture, handling or storage of hazardous chemicals.

- b. site stability during all phases of construction and development;
- the development is not adversely affected by C. landslide activity originating on sloping land above
- d. emergency access and access from the site for the public and emergency vehicles is available and is not at risk from landslide.

Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)

PO92

Odour sensitive development is separated from Wastewater treatment plants so they are not adversely affected by odour emission or other air pollutant impacts.

AO92

The following uses are not located within a wastewater treatment site buffer:

- Caretaker's accommodation (10) a.
- Community residence (16) b.
- Dual occupancy⁽²¹⁾
- Dwelling house⁽²²⁾ d.
- Dwelling unit⁽²³⁾; e.
- Hospital⁽³⁶⁾: f.
- Rooming accommodation (69): g
- Multiple dwelling (49): h.
- Non-resident workforce accommodation (52); i.
- Relocatable home park (62): j.
- Residential care facility⁽⁶⁵⁾; k.
- Resort complex⁽⁶⁶⁾;
- Retirement facility (67);
- Rural workers' accommodation⁽⁷¹⁾; n.
- Short-term accommodation (77); 0.
- Tourist park (84). p.

PO93

Development within a Water supply buffer captures solid or liquid waste from all land use, development and activities is designed, constructed and managed to prevent the release of contaminants to surface water or groundwater bodies.

AO93.1

Run-off and sediment from roadways and impervious surfaces within a Water supply buffer are intercepted and treated on-site to remove oil, grease, chemicals, silt, trace metals and nutrients such as nitrogen and phosphorous.

AO93.2

Incineration or burial of waste within a Water supply buffer is not undertaken onsite.

AO93.3

Solid waste within a Water supply buffer is collected and stored in weather proof, sealed waste receptacles, located in roofed and bunded areas, for disposal by a licenced contractor.

AO93.4

Holding tanks within a Water supply buffer are used for all liquid waste and provide for the separation of oils/solvents and solids prior to pump-out and collection by a licenced contractor.

AO93.5

Management, handling and storage of hazardous chemicals (including fuelling of vehicles) within a Water supply buffer, is undertaken in secured, climate controlled, weather proof, level and bunded enclosures.

PO94

On-site sewerage systems within a Water supply buffer are designed and operated to ensure there is no worsening or adverse impacts to health risks, environmental risks and water quality.

Editor's Note - For guidance refer to the Seq water Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.

AO94

Secondary treated wastewater treatment systems within a Water supply buffer include:

- emergency storage capable of holding 3-6 hours peak flow of treated effluent in the event of emergencies or overload with provision for de-sludging;
- back up pump installation and backup power;
- MEDLI modelling to determine irrigation rates and sizing of irrigation areas;
- vegetated land application areas are not located in overland flow paths or on areas that perform groundwater recharge or discharge functions; and
- wastewater collection and storage systems have a capacity to accommodate full load at peak times and includes temporary facilities.

PO95

Development within a Bulk water supply infrastructure buffer is located, designed and constructed to:

- protect the integrity of the water supply pipeline; a.
- maintain adequate access for any required b. maintenance or upgrading work to the water supply pipeline;

AO95

Development:

- does not involve the construction of any buildings or structures within a Bulk water supply infrastructure buffer;
- involving a major hazard facility or environmentally relevant activity (ERA) is setback 30m from a Bulk water supply infrastructure buffer.

PO96

Development is located and designed to maintain required access to Bulk water supply infrastructure.

AO96

Development does not restrict access to Bulk water supply infrastructure of any type or size, having regard to (among other things):

- buildings or structures; a.
- b. gates and fences;
- storage of equipment or materials; C.
- d. landscaping or earthworks or stormwater or other infrastructure.

PO97

Odour sensitive development is separated from landfill sites so they are not adversely affected by odour emission or other air pollutant impacts.

AO97

The following uses are not located within a Landfill buffer:

- Caretaker's accommodation (10); a.
- Community residence (16): b.
- Dual occupancy⁽²¹⁾; C.
- Dwelling house⁽²²⁾; d.
- Dwelling unit⁽²³⁾; e.
- Hospital (36); f.
- Rooming accommodation (69) g.
- Multiple dwelling⁽⁴⁹⁾: h.
- Non-resident workforce accommodation i.
- Relocatable home park (62); j.
- Residential care facility (65):
- Resort complex⁽⁶⁶⁾: I.
- Retirement facility⁽⁶⁷⁾: m.
- Rural workers' accommodation (71)
- Short-term accommodation (77);
- Tourist park⁽⁸⁴⁾.

PO98

Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development:

- is located and designed to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields in accordance with the principle of prudent avoidance;
- is located and designed in a manner that maintains b. a high level of security of supply;
- is located and design so not to impede upon the functioning and maintenance of high voltage electrical infrastructure.

AO98

Development does not involve the construction of any buildings or structures within a High voltage electricity line buffer.

PO99

Development within a Pumping station buffer is located, designed and constructed to:

- ensure that odour or other air pollutant impacts on the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008;
- ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008.

AO99

Development does not involve the construction of any buildings or structures within a Pumping station buffer.

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.

PO100 No acceptable outcome provided. Development: minimises the risk to persons from overland flow; does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. PO101 No acceptable outcome provided Development: maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment; does not concentrate, intensify or divert overland b. flow onto an upstream, downstream or surrounding property. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow. PO102 No acceptable outcome provided. Development does not: directly, indirectly or cumulatively cause any a. increase in overland flow velocity or level; increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure. Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring. PO103 AO103 Development ensures that public safety and the risk to Development ensures that a hazardous chemical is not the environment are not adversely affected by a located or stored in an Overland flow path area. detrimental impact of overland flow on a hazardous chemical located or stored on the premises. Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances. PO104 AO104

Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.

Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.

PO105

Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained.

Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.

Note - Reporting to be prepared in accordance with Planning scheme policy - Flood hazard, Coastal hazard and Overland flow

AO105.1

Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM:

- a. Urban area - Level III;
- b. Rural area – N/A;
- Industrial area Level V; C.
- d. Commercial area - Level V.

PO105.2

Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.

PO106

Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:

- a stormwater pipe if the nominal pipe diameter exceeds 300mm;
- an overland flow path where it crosses more than b. one premises;
- inter-allotment drainage infrastructure

Note - Refer to Planning scheme policy - Integrated design for details and examples.

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.

No acceptable outcome provided.

Additional criteria for development for a Park (57)

PO107

Development for a Park⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:

public benefit and enjoyment is maximised; a.

AO107

Development for a Park⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.

- b. impacts on the asset life and integrity of park structures is minimised;
- C. maintenance and replacement costs are minimised.

Riparian and wetland setbacks

PO108

Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:

- impact on fauna habitats; a.
- b. impact on wildlife corridors and connectivity;
- C. impact on stream integrity;
- d. impact of opportunities for revegetation and rehabilitation planting;
- edge effects. e.

AO108

Development does not occur within:

- 50m from top of bank for W1 waterway and drainage a.
- 30m from top of bank for W2 waterway and drainage b.
- 20m from top of bank for W3 waterway and drainage
- 100m from the edge of a Ramsar wetland, 50m from all other wetlands.

Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps - Riparian and wetland setbacks.

Transport noise corridors (refer Overlay map - Transport noise corridors to determine if the following assessment criteria apply)

Note - This is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport Noise Corridor must satisfy the requirements of the Queensland Development Code
