6.2.7 Industry zone code

6.2.7.1 Application - Industry zone

This code applies to assessing development in the Industry zone, if:

- 1. self-assessable or assessable development where this code is an applicable code identified in the assessment criteria column of a table of assessment (Part 5);
- 2. impact assessable development (Part 5).

When using this code, reference should be made to Section 5.3.2 Determining the level of assessment and where applicable, Section 5.3.3 Determining the assessment criteria. For self-assessable or assessable development for this Code Part 6.2.7:

- 1. Part A of the code applies to self-assessable development in all precincts;
- 2. Part B of the code applies only to assessable development in the 6.2.7.1 'Mixed industry and business precinct';
- 3. Part C of the code applies only to assessable development in the 6.2.7.2 'Light industry precinct';
- 4. Part D of the code applies only to assessable development in the 6.2.7.3 'General industry precinct';
- 5. Part E of the code applies only to assessable development in the 6.2.7.4 'Restricted industry precinct';
- 6. Part F of the code applies only to assessable development in the 6.2.7.5 'Marine industry precinct'.

6.2.7.2 Purpose - Industry zone

- 1. The purpose of the Industry zone code is to provide for a range of service, low, medium, or high impact industrial uses. It may include non-industrial and business uses that support the industrial activities where they do not compromise the long-term use of the land for industrial purposes.
- 2. Industry areas contain high quality, fully serviced, accessible land accommodating a wide range of industrial and supporting activities in accordance with acceptable environmental standards and with minimal impact on surrounding uses. The purpose of the Industry zone code is to implement the policy direction as set out in Part 3, Strategic Framework. The Industry zone contains 5 precincts which have the following purpose:
 - a. The Mixed industry and business precinct will facilitate a range of low impact industry⁽⁴²⁾ and associated commercial uses which have a nexus with other industrial activities occurring in the precinct.
 - b. The Light industry precinct will facilitate and maintain the long term viability of a range of low impact and low intensity industrial and business activities which are compatible with adjacent commercial and residential areas.
 - c. The General industry precinct will facilitate and maintain the long term viability of a broad range of industrial uses which provide significant employment opportunities and require locations which are well separated from incompatible uses.
 - d. The Restricted industry precinct will support the continued viability of a range of high impact and hard to locate industrial uses which contribute significantly to the regional economy and require locations which are well separated from incompatible uses.
 - e. The Marine industry precinct will facilitate and maintain the long-term viability waterfront-based industry and associated commercial activities which require direct access to a waterway.

6.2.7.3 Criteria for assessment

To determine if development is self-assessable, development must comply with the self-assessable outcomes set out in Part A, Table 6.2.7.1. Where development does not meet a self-assessable acceptable outcome (SAO) of the relevant criteria in Part A, Table 6.2.7.1, assessment is against the corresponding performance outcome (PO) identified in the table below. This only occurs whenever a SAO is not met, and is therefore limited to the subject matter of the SAOs that are not complied with. To remove any doubt, for those SAOs that are complied with, there is no need for assessment against the corresponding PO.

Self-assessable outcome	Mixed industry and business precinct - corresponding performance outcome	Light industry precinct - corresponding performance outcome	General industry precinct - corresponding performance outcome	Restricted industry precinct - corresponding performance outcome	Marine industry precinct - corresponding performance outcome

Where development is code assessable development in the Table of Assessment, the assessment criteria for that development are set out in Parts B, C, D, E and F of the code.

Where development is impact assessable, the assessment criteria becomes the whole of the planning scheme.

Part A—Criteria for self-assessable development - All precincts

Table 6.2.7.1 Criteria for self-assessable development - All precincts

Self-as	sessable acceptable outcomes
	General criteria
Extensi	ons to existing buildings
SAO1	Extensions to an existing building do not exceed 20% of the existing GFA on-site.
	Note - The 20% increase in GFA includes all previous instances of GFA increase under this outcome, or as part of Building Work.
Buildin	g height
SAO2	Building height does not exceed the maximum height identified on Overlay map - Building heights.
Setbac	(S
SAO3	Extensions to buildings maintain a minimum setback of:
	a. 6m to the street frontage (other than the Bruce Highway);
	b. 3m to the secondary street frontage;
	c. 5m to land not included in the Industry zone;
	d. 10m to a boundary adjoining the Bruce Highway.
Landsc	aping
SAO4	Development does not result in a net reduction in established landscaping on the site.
Lighting	g C
SAO5	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of the Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.
	Note - "Curfewed hours" are taken to be those between 10pm and 7am the following day.
Car par	king
SAO6	On-site car parking is provided at a rate identified in Schedule 7 - Car parking.
Waste	
SAO7	Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste.

<u> </u>	
Clearin	g of habitat trees where not located in the Environmental areas overlay map
SAO8	Development does not result in the damaging, destroyed or clearing of a habitat tree. This does not apply to:
	a. Clearing of a habitat tree located within an approved development footprint;
	b. Clearing of a habitat tree within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
	c. Clearing of a habitat tree reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
	d. Clearing of a habitat tree reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental management and conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
	e. Clearing of a habitat tree reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
	f. Clearing of a habitat tree in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
	g. Clearing of a habitat tree associated with removal of recognised weed species, maintaining existin open pastures and cropping land, windbreaks, lawns or created gardens;
	 Native forest practice where exempt under Part 1, 1.7.7 Exempt development. Editor's note - A native tree measuring greater than 80cm in diameter when measured at 1.3m from the ground is recognised as a 'habitat tree'. For further information on habitat trees, refer to Planning scheme policy – Environmental areas and corridors. Information detailing how this measurement is undertaken is provided in Australian Standard AS 4970 2009 Protection of Trees on Development Sites - Appendix A.
	Works criteria
Utilities	
SAO9	Where available, the development is connected to:
	a. an existing reticulated electricity supply;
	b. telecommunications and broadband;
	 c. reticulated sewerage; d. reticulated water;
	e. sealed and dedicated road.
Access	
SAO10	Any new or changes to existing site access and driveways are designed and located in accordance with
	 a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoad and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.

1	essable acceptable outcomes
SAO11	Any new or changes to existing internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.
Stormw	ater
SAO12	Any new or changes to existing stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises in accordance with Planning scheme policy – Integrated design. Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.
SAO13	 Development incorporates a minimum of 2% of the site area constructed as a bioretention system in accordance with Planning scheme policy – Integrated design if the development: a. is for urban purposes only; b. involves a land area greater than 2500m²; c. will result in 6 or more dwellings; OR will result in an impervious area greater than 25% of the net developable area;
Site wo	ks and construction management
SAO14	The site and any existing structures are to be maintained in a tidy and safe condition.
SAO15	Site construction works incorporate temporary stormwater run-off, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design.
SAO16	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.
SAO17	All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles or storage of machinery or goods is to occur in these areas during development works.
SAO18	Any damage to Council land or infrastructure is repaired or replaced with the same materials, prior to plan sealing, or final building classification.
SAO19	Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
Earthwo	orks
SAO20	The site is prepared and the fill placed on-site in accordance with Australian Standard AS3798.
	Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures

Self-assessable acceptable outcomes
Figure - Cut and fill
Lot Boundaries
Batter Cut <u>Finished surface level</u> 900mm Fill Batter maximum
Note - This is site eathworks not building work.
 SAO22 Filling or excavation does not result in: a. a reduction in cover over any Council or public sector entity infrastructure to less than 600mm; b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the filling or excavation works being undertaken.
Note - Public sector entity is defined in the Sustainable Planning Act 2009.
Fire services Note - The provisions under this heading only apply if: a. the development is for, or incorporates:
 i. reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or ii. material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or iii. material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or iv. material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials.
b. none of the following exceptions apply:
 i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.
Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.
SAO23 External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of <i>Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.</i>

Self-as:	sessable acceptable outcomes
	Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005):
	 a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks⁽⁸⁴⁾ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
	b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
	c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that:
	i for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
	ii for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
	iii for outdoor sales ⁽⁵⁴⁾ , processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales ⁽⁵⁴⁾ , outdoor processing and outdoor storage facilities; and
	d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and where applicable, Part 3.6.
SAO24	A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:
	a. an unobstructed width of no less than 3.5m;
	b. an unobstructed height of no less than 4.8m;
	c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
	d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.
SAO25	For development that contains on-site fire hydrants external to buildings:
	a. those external hydrants can be seen from the vehicular entry point to the site; orb. a sign identifying the following is provided at the vehicular entry point to the site:
	i. the overall layout of the development (to scale);
	ii. internal road names (where used);iii. all communal facilities (where provided);
	iv. the reception area and on-site manager's office (where provided);
	v. external hydrants and hydrant booster points;
	vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.
	Note - The sign prescribed above, and the graphics used are to be:
	a. in a form;
	b. of a size;
	c. illuminated to a level;
	which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.

Self-ass	sessable acceptable outcomes
	Use specific criteria
Land us	ie
SAO26	Where within 100m of a sensitive zone:
	a. development is undertaken fully indoors;
	b. uses do not create audible noise measured at the boundary of the site between the hours of 7:00 pm and 6:00 am;
	c. any new plant or air conditioning equipment is not located along adjoining boundaries with sensitive land uses and screened from view of the street;
	d. landscaping and noise attenuating fencing are used to buffer visual and audible impacts generated from the use.
SAO27	The combined area for ancillary office $^{(53)}$ and administration functions does not exceed 20% of the GFA or 200m ² whichever is the lesser.
SAO28	The display of items for sale to the public is limited to commodities, articles or goods resulting from the industrial processes undertaken on-site and limited to 5% of the GFA or 100m ² of the use, whichever is the lesser.
Caretak	er's accommodation ⁽¹⁰⁾
SAO29	Caretaker's accommodation ⁽¹⁰⁾ :
	a. has a maximum GFA of 80m ² ;
	b. does not gain access from a separate driveway to the principal use of the site;
	c. Includes a minimum 16m ² of private open space directly accessible from a habitable room.
Hazard	ous Chemicals
SAO30	All development that involves the storage or handling of hazardous chemicals listed in Schedule 9, Table 9.0.1 Hazardous Chemicals Self-Assessable Thresholds complies with Schedule 9, Table 9.0.3 Hazardous Chemicals Self-Assessable Criteria.
SAO31	Development does not involve the storage or handling of hazardous chemicals listed in Schedule 9, Table 9.0.2 Hazardous Chemicals Assessable Thresholds.
Telecon	nmunications facility ⁽⁸¹⁾
that will i	note - In accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾ must be constructed and operated in a manner not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic n - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz Iz.
SAO32	A minimum of 45m ² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.
SAO33	The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.

Self-ass	essable acceptable outcomes
SAO34	Equipment shelters and associated structures are located:
	 a. directly beside the existing equipment shelter and associated structures; b. behind the main building line; c. further away from the frontage than the existing equipment shelter and associated structures; d. a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.
SAO35	Equipment shelters and other associated structures are either the same type of colour or material to match the surrounding locality.
SAO36	The facility is enclosed by security fencing or by other means to ensure public access is prohibited.
SAO37	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the development and street frontage and adjoining uses.
	Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.
	Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person to ensure compliance with Planning scheme policy - Integrated design.
SAO38	All equipment comprising the telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.
	Values and constraints criteria
apply) Note - To is prepar	fate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria demonstrate achievement of the performance outcome, an Acid sulfate soils (ASS) investigation report and soil management plan ed by a qualified engineer. Guidance for the preparation an ASS investigation report and soil management plan is provided in scheme policy - Acid sulfate soils.
SAO39	 Development does not involve: a. excavation or otherwise removing of more than 100m³ of soil or sediment where below 5m Australian Height Datum AHD, or b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below
	the 5m AHD.
	Surface Elevation ≤5m AHD Surface Elevation >5m and <20m AHD Surface Elevation ≥20m AHD +20m AHD
	+15m AHD-
	+10m AHD
	Omen-watered)
	-5m AHD— 🗸 🗶 🖌 🖌 🖌 🖌

Self-assessable acceptable outcomes
Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)
Note - The following are exempt from the native clearing provisions of this planning scheme:
a. Clearing of native vegetation located within an approved development footprint;
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
h. Grazing of native pasture by stock;
i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.
Note - Definition for native vegetation is located in Schedule 1 Definitions.
Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.
Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.
Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.
SAO40 Where no suitable land cleared of native vegetation exists, clearing of native vegetation in High Value Area or Value Offset Area is for the purpose of a new dwelling house ⁽²²⁾ and all associated facilities* or an extension to an existing dwelling house ⁽²²⁾ only, and comprises an area no greater than 1500m ² .
Note -*All associated facilities includes: on-site wastewater treatment, all areas of disturbance, on-site parking, access and manoeuvring areas.
Editor's note - See in heading above for other uses exempt from native vegetation clearing requirements.
Editor's note - Where self-assessable vegetation clearance is being undertaken, care should be undertaken to avoid adverse impacts on koalas, koala habitat values and habitat connectivity and to encourage existing koala usage of the site. Measures to minimise impacts include:
 i. co-locating all associated activities, infrastructure and access strips; ii. be the least valued area of koala habitat on the site; iii. minimise the footprint of the development envelope area;

minimise edge effects to areas external to the development envelope;

iv.

Self-as	sessable acceptable outcomes
	 v. location and design consideration to ensure koala safety and movement in accordance with the Koala-sensitive Design Guideline and Planning scheme policy – Environmental areas; vi. sufficient area between the development and koala habitat trees to achieve their long-term viability.
	Editor's note - Where self-assessable vegetation clearing is being undertaken, consideration should be given to avoid clearing habitat trees. Habitat trees may contain structural hollows where animals live, breed and shelter. The provision of nest boxes or salvaging of hollows will provide compensatory roosting and nesting opportunities for local wildlife including sugar gliders, possums and owls. For further information see Planning scheme policy – Environmental areas.
SAO41	No clearing of native vegetation is to occur within the Value Offset Area MLES - Waterway buffer or Valu Offset Area MLES - Wetland buffer.
	This does not apply to the following:
	 a. Clearing of native vegetation located within an approved development footprint; b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessar for emergency access or immediately required in response to an accident or emergency;
	 Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation pose to serious personal injury or damage to infrastructure;
	d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundar fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential an Environmental management and conservation zones. In any other zone, clearing is not to excee 2m in width either side of the fence;
	e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works with a registered easement for public infrastructure or drainage purposes;
	 f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitab qualified person, submitted to and accepted by Council;
	 g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens; h. Grazing of native pasture by stock;
	 Native forest practice where exempt under Part 1, 1.7.7 Exempt development.
	ve resources separation area (refer Overlay map - Extractive resources (separation area) to determin llowing assessment criteria apply)
SAO42	Development does not result in more than one dwelling house ⁽²²⁾ per lot within separation areas.
SAO43	Development within the separation area does not include the following uses:
	a. caretaker's accommodation ⁽¹⁰⁾ ;
	b. community residence ⁽¹⁶⁾ ;
	c. dual occupancy ⁽²¹⁾ ;
	d. dwelling unit ⁽²³⁾ ;
	e. hospital ⁽³⁶⁾ ; (69)
	f. rooming accommodation ⁽⁶⁹⁾ ;
	g. multiple dwelling (**);
	h. non-resident workforce accommodation ⁽⁵²⁾ ;
	i. relocatable home park ⁽⁶²⁾ ;
	 j. residential care facility⁽⁶⁵⁾; k. resort complex⁽⁶⁶⁾;
	 k. resort complex⁽⁶⁰⁾; l. retirement facility⁽⁶⁷⁾;
	m. rural workers' accommodation ⁽⁷¹⁾ ;
	n. short-term accommodation ⁽⁷⁷⁾ ;
	o. tourist park ⁽⁸⁴⁾ .

Self-ass	sessable acceptable outcomes
SAO44	All habitable rooms within the separation area are:
	a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008;
	b. provided with mechanical ventilation.
SAO45	Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.
	ive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer) rmine if the following assessment criteria apply)
SAO46	The following uses are not located within the 100m wide transport route buffer: a. Caretaker's accommodation ⁽¹⁰⁾ , except where located in the Extractive industry zone;
54047	 b. Community residence⁽¹⁶⁾; c. Dual occupancy⁽²¹⁾; d. Dwelling house;⁽²²⁾ e. Dwelling unit⁽²³⁾; f. Hospital⁽³⁶⁾; g. Rooming accommodation⁽⁶⁹⁾; h. Multiple dwelling⁽⁴⁹⁾; i. Non-resident workforce accommodation⁽⁵²⁾; j. Relocatable home park⁽⁶²⁾; k. Residential care facility⁽⁶⁵⁾; l. Resort complex⁽⁶⁶⁾; m. Retirement facility⁽⁶⁷⁾; n. Rural workers' accommodation⁽⁷¹⁾; o. Short-term accommodation⁽⁷⁷⁾; p. Tourist park⁽⁸⁴⁾.
SAO47	Except for an existing vacant lot, development does not create a new vehicle access point onto an Extractive resources transport route.
SAO48	A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.
the follo Note - Pl landscap heritage	e and landscape character (refer Overlay map - Heritage and landscape character to determine if owing assessment criteria apply) laces, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and be character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning policy - Heritage and landscape character.
SAO49	Development is for the preservation, maintenance, repair and restoration of the site, object or building.
	This does not apply to Listed item 99, in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.
	Note - Preservation, maintenance, repair and restoration are defined in Schedule 1 - Definitions

SAO50					
	A cultural heritage conservation management plan is prepared in accordance with Planning scheme policy – Heritage and landscape character and submitted to Council prior to the commencement of any preservation, maintenance, repair and restoration works. Any preservation, maintenance, repair and restoration works are in accordance with the Council approved cultural heritage conservation management plan.				
	This does not apply to Listed item 99 in Schedule 1 - List of sites, objects and buildings of significant historical and cultural value of Planning scheme policy - Heritage and landscape character.				
SAO51	Development does not result in the removal of or damage to any significant tree identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character.				
SAO52	 The following development does not occur within 20m of the base of any significant tree, identified on Overlay map – Heritage and landscape character and listed in Appendix 2 of Planning scheme policy – Heritage and landscape character: a. construction of any building; b. laying of overhead or underground services; c. any sealing, paving, soil compaction; d. any alteration of more than 75mm to the ground level prior to work commencing. 				
SAO53	Pruning of a significant tree occurs in accordance with Australian Standard AS 4373-2007 - Pruning of Amenity Trees.				
	ucture buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment				
criteria	apply)				
SAO54	Development does not include the following uses within a Wastewater treatment site buffer: a. Caretaker's accommodation ⁽¹⁰⁾ ; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ; d. Dwelling house; ⁽²²⁾ e. Dwelling unit ⁽²³⁾ ; f. Hospital ⁽³⁶⁾ ; g. Rooming accommodation ⁽⁶⁹⁾ ; h. Multiple dwelling ⁽⁴⁹⁾ ; i. Non-resident workforce accommodation ⁽⁵²⁾ ; j. Relocatable home park ⁽⁶²⁾ ; k. Residential care facility ⁽⁶⁵⁾ ; l. Resort complex ⁽⁶⁶⁾ ; m. Retirement facility ⁽⁶⁷⁾ ; n. Rural workers' accommodation ⁽⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷⁾ ; p. Tourist park ⁽⁸⁴⁾ .				

Self-ass	sessable acceptable outcomes
	 h. multiple dwelling⁽⁴⁹⁾; i. non-resident workforce accommodation⁽⁵²⁾; j. relocatable home park⁽⁶²⁾; k. residential care facility⁽⁶⁵⁾; l. resort complex⁽⁶⁶⁾; m. retirement facility⁽⁶⁷⁾; n. rural workers' accommodation⁽⁷¹⁾; o. short term accommodation⁽⁷⁷⁾; p. tourist park⁽⁸⁴⁾.
SAO56	All habitable rooms located within an Electricity supply substation buffer are:
	 a. located a minimum of 10m from an electricity supply substation⁽⁸⁰⁾; and b. acoustically insulated to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008.
SAO57	Development does not involve the construction of any buildings or structures containing habitable rooms or sensitive land uses within a High voltage electricity line buffer.
Overlar apply)	nd flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria
SAO58	Development for a material change of use or building work does not involve the construction of a building or structure in an Overland flow path area.
SAO59	Development for a material change of use or operational work does not impede the flow of flood waters through the premises or worsen flood flows to other premises. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development
	does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow
SAO60	Development for a material change of use or building work ensures that fencing in an overland flow path area is at least 50% permeable.
SAO61	Development for a material change of use or building work that involves a hazardous chemical ensures the hazardous chemicals is not located within an overland flow path area.
SAO62	Development for a material change of use or building work for a Park ⁽⁵⁷⁾ ensures that work is provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.
followin	n and wetland setbacks (refer Overlay map - Riparian and wetland setback to determine if the ng assessment criteria apply) /1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and setbacks.
SAO63	No development is to occur within:
	a. 50m from top of bank for W1 waterway and drainage line
	b. 30m from top of bank for W2 waterway and drainage line

Self-ass	essable acceptable outcomes
	c. 20m from top of bank for W3 waterway and drainage line
	d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.
	Note - W1, W2 and W3 waterways and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
	Note - In some cases, the top of bank may not be easily defined, as such a hydraulic measurement may be applied instead. Moreton Bay Regional Council will provide further direction on how to determine and locate the setback boundary in these locations.
	Note - The minimum setback distance applies to the each side of waterway.
assessm Note - Thi	rt noise corridors (refer Overlay map - Transport noise corridors to determine if the following nent criteria apply) is is for information purposes only. No self-assessable criteria or assessable criteria apply. Development located within a Transport rridor must satisfy the requirements of the Queensland Development Code
	schemente Scheming Scheming

6.2.7.1 Mixed industry and business precinct

6.2.7.1.1 Purpose - Mixed industry and business precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the Mixed industry and business precinct:
 - a. A range of employment-intensive, knowledge-based, low impact industrial activities and associated commercial activities are established in the precinct which benefit from high levels of exposure and access to high quality transport infrastructure.
 - b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.
 - c. Development is located, designed and managed to:
 - i. maintain the health and safety of people;
 - ii. avoid significant adverse effects on the natural environment;
 - iii. minimise the possibility of adverse impacts on nearby non-industrial uses;
 - iv. be adaptable for alternative industry uses.
 - d. Development has access to infrastructure and essential services and safe and convenient access to major transport routes.
 - e. Development is designed to incorporate sustainable practices including water sensitive design and energy efficient building design.
 - f. The scale, character, and built form of development and the resulting streetscape contribute to a high standard of visual and physical amenity and incorporate crime prevention through environmental design (CPTED) principles.
 - g. Commercial, Shop and Office activities only occur in the precinct where:
 - i. there is a justified need for the use to be located in the precinct;
 - ii. the use does not compromise the role or function of the region's centres network.
 - h. Sensitive land uses do not occur where they could compromise or constrain existing or future industrial land uses in the precinct or adjoining industrial areas.
 - i. Special industry⁽⁷⁹⁾ does not establish within the precinct.
 - j. Development encourages public transport patronage and active transport choices through streetscape improvements and the provision of appropriate end of trip facilities.
 - k. The continued operation of Places of worship and Medium impact industries that were lawfully established at commencement is supported. Any extensions to these uses needs to satisfy the outcomes of this code.
 - I. Large format retail, car dominated uses or uses that require large outdoor storage space are not located in the precinct.
 - m. Development provides a high quality urban form and landscaped environment.
 - n. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);

- ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
- iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
- iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
- v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
- o. Development does not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
- p. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
- q. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
- r. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
 - viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
 - ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
 - x. ensuring effective and efficient disaster management response and recovery capabilities;
 - xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;

- C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
- D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- s. Development in the Mixed industry and business precinct includes one or more of the following:

•	Caretaker's accommodation ⁽¹⁰⁾	•	Indoor sport and recreation ⁽³⁸⁾	•	Sales office ^{(72)}
•	Educational establishment ⁽²⁴⁾ (if for	•	Low impact industry ⁽⁴²⁾	•	Service industry ⁽⁷³⁾ Service station ⁽⁷⁴⁾
	technical or trade related education)	•	Medium impact industry ⁽⁴⁷⁾ (if at least 250 metres from a sensitive land use or		Showroom ⁽⁷⁸⁾ (where for industry or trade related
•	Emergency services ⁽²⁵⁾		zone)		products and a maximum of 500m ² GFA)
•	Food and drink outlet ⁽²⁸⁾ (if less than 100m ² GFA)	•	Office ⁽⁵³⁾ (where on a District Collector road or bigher)	•	Warehouse ⁽⁸⁸⁾
•	Hardware and trade supplies ⁽³²⁾ (where a maximum of 500m ² GFA)	•	higher) Outdoor sales ⁽⁵⁴⁾ (where for sale of goods manufactured	2	
		•	on-site) Research and technology industry ⁽⁶⁴⁾		

t. Development in the Mixed industry and business precinct does not include any of the following:

	•	Air services ⁽³⁾	: (Funeral parlour ⁽³⁰⁾	•	Permanent plantation ⁽⁵⁹⁾
•	•	Animal keeping ⁽⁵⁾		Garden centre ⁽³¹⁾	•	Relocatable home park ⁽⁶²⁾
		Bar ⁽⁷⁾	•	Hardware and trade supplies ⁽³²⁾ (Where	•	Residential care facility ⁽⁶⁵⁾
		Brothel ⁽⁸⁾		exceeding 500m ² GFA)	•	Resort complex ⁽⁶⁶⁾
	•	Cemetery ⁽¹²⁾	•	High Impact Industry ⁽³⁴⁾	•	Retirement facility ⁽⁶⁷⁾
	•	Community care centre ⁽¹⁵⁾	•	Hospital ⁽³⁶⁾	•	Roadside stall ⁽⁶⁸⁾
	• <	Community residence ⁽¹⁶⁾	•	Hotel ⁽³⁷⁾	•	Rooming accommodation ⁽⁶⁹⁾
	\cdot	Community use ⁽¹⁷⁾	•	Intensive animal industry ⁽³⁹⁾	•	Rural industry ⁽⁷⁰⁾
		Cropping ⁽¹⁹⁾	•	Intensive horticulture ⁽⁴⁰⁾	•	Rural workers' accommodation ⁽⁷¹⁾
	•	Detention facility ⁽²⁰⁾	•	Landing ⁽⁴¹⁾	•	Shopping Centre ⁽⁷⁶⁾
	•	Dual occupancy ⁽²¹⁾	•	Major sport, recreation and		Short-term
	•	Dwelling house ⁽²²⁾		entertainment facility ⁽⁴⁴⁾	•	accommodation ⁽⁷⁷⁾
			•	Market ⁽⁴⁶⁾		

•	Dwelling unit ⁽²³⁾	•	Multiple dwelling ⁽⁴⁹⁾	•	Showroom ⁽⁷⁸⁾ (where not for industry or trade related
•	Education establishment (where not for technical or	•	Nature-based tourism ⁽⁵⁰⁾		products or exceeds 500m ² GFA)
	trade related education)	•	Nightclub entertainment facility ⁽⁵¹⁾	•	Special industry ⁽⁷⁹⁾
•	Environment facility ⁽²⁶⁾		Non-resident workforce		
•	Extractive industry ⁽²⁷⁾		accommodation ⁽⁵²⁾	•	Theatre ⁽⁸²⁾
•	Food and drink outlet ⁽²⁸⁾	•	Outdoor sport and recreation ⁽⁵⁵⁾		Tourist park ⁽⁸⁴⁾
	(where exceeding 100m ² GFA)				Veterinary services ⁽⁸⁷⁾
	Function facility ⁽²⁹⁾	•	Parking station ⁽⁵⁸⁾	•	Wholesale nursery ⁽⁸⁹⁾
•			50		Winery ⁽⁹⁰⁾

u. Development not included in the tables above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.1.2 Criteria for assessment

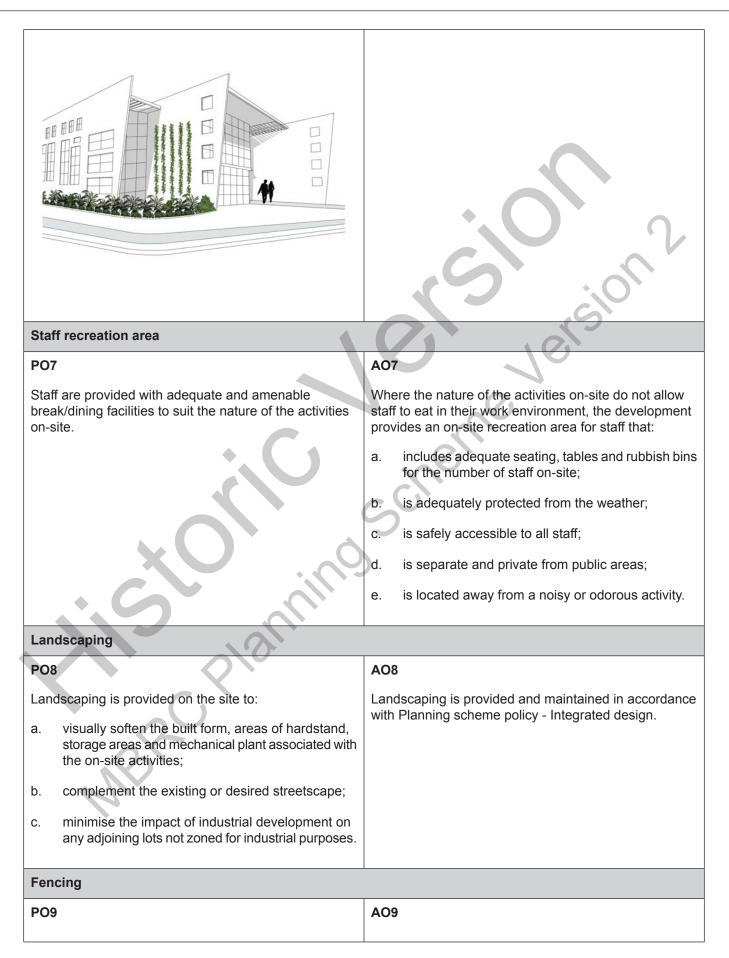

Part B—Criteria for assessable development - Mixed industry and business precinct

Table 6.2.7.1.1 Assessable develop	ment - Mixed inc	dustry and business prec	inct

Performance outcomes	Acceptable outcomes				
Genera	criteria				
Site cover					
P01	No acceptable outcome provided.				
Site cover is limited to a proportion of a site that ensures:					
a. A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;					
b. Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;					
c. setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;					
d. Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.					
Building height	Building height				
PO2	AO2				

indu does	height of buildings is in keeping with the predominant strial and commercial character of the precinct and s not cause adverse amenity impacts on nearby sitive land uses and zones.	Building height does not exceed the maximum height identified on Overlay map - Building heights.
Sett	packs	
PO3	}	A03
Stre	et boundary setbacks:	Buildings maintain a minimum setback of:
a.	minimise building bulk and visual dominance from the street;	a. 6m to the primary frontage (other than the Bruce Highway);
b.	provide areas for landscaping at the front of the site;	b. 3m to the secondary street frontage;c. 10m to a boundary adjoining the Bruce Highway.
C.	allow for customer parking to be located at the front of the building;	c. 10m to a boundary adjoining the Bruce Highway.
d.	provide opportunities for dense landscaping to screen at maturity any visibility of development of a site from the Bruce Highway.	
PO4		A04
acce	e and rear boundary setbacks maintain views, privacy, ess to natural light and the visual amenity of adjoining sitive land uses.	Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m. Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.
Buil	ding appearance and design	
	dings exhibit a high standard of commercial design construction, which: adds visual interest to the streetscape, through variation in building materials, colours and features; does not result in blank, unarticulated walls fronting streets or public areas; reduces the perceived bulk of the building when viewed from the street; articulates or accentuates the administration and customer service areas of the building;	No acceptable outcome provided.
e.	contributes to safe environment, through the	

ass	e - Refer to Planning scheme policy - Integrated transport essment for guidance on how to achieve compliance with this come.	
PO1	12	A012
The a. b. c. d.	 design of vehicle entry points and car parking areas: does not impact on the safety of the external road network; ensures the safety of pedestrians at all times; ensures the safe movement of vehicles within the site; provides connections with car parking areas on adjoining sites where possible. 	All vehicle entry points and car parking areas are designed and constructed in accordance with Australian Standard AS2890.1.
PO1		A013
Veh	icle cross-overs do not dominate the street frontage.	A maximum of 1 vehicle cross-over is provided to each street frontage unless required for manoeuvring purposes.
Not	ycle parking and end of trip facilities e - Building work to which this code applies constitutes Major Dev lities prescribed in the Queensland Development Code MP 4.1.	elopment for purposes of development requirements for end of trip
Not faci	e - Building work to which this code applies constitutes Major Dev lities prescribed in the Queensland Development Code MP 4.1.	elopment for purposes of development requirements for end of trip AO14.1

Not faci	 Building work to which this code applies constitutes Major Development Code MP 4.1. I4 End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include: adequate bicycle parking and storage facilities; and adequate provision for securing belongings; and change rooms that include adequate showers, 	AO14.1 Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional
Not faci	 Building work to which this code applies constitutes Major Development Code MP 4.1. I4 End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include: adequate bicycle parking and storage facilities; and adequate provision for securing belongings; and change rooms that include adequate showers, sanitary compartments, wash basins and 	AO14.1 Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

- ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or
- iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the acceptable outcomes under this heading meet the current performance requirement prescribed in the Queensland Development Code.

- c. located within the building or in a dedicated, secure structure for residents and staff;
- d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO14.3

For non-residential uses, storage lockers:

- a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);
- b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO14.4

For non-residential uses, changing rooms:

- a. are provided at a rate of 1 per 10 bicycle parking spaces;
- b. are fitted with a lockable door or otherwise screened from public view;
- are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

	lale/ Change rooms required	Showers required	Sanitary compartments required	Washbasins required
--	-----------------------------------	------------------	--------------------------------------	------------------------

	1-5	Male and female	1 unisex change room	1	1 closet pan	1

Loading and servicing						
PO15	No acc	eptable	outcom	e provide	ed.	
Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads.						
Note - If landscaping is proposed for screening purposes, refer to Planning scheme Policy - Integrated design for determining acceptable levels.						

Waste	
PO16 Bins and bin storage areas are provided, designed and managed in accordance with Planning scheme policy – Waste.	No acceptable outcome provided.
Environmental impacts	
PO17 Where a use is not an environmentally relevant activity under the <i>Environmental Protection Act 1994</i> , the release of any containment that may cause environmental harm is mitigated to an acceptable level.	AO17 Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.
Lighting	
PO18 Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.	A018 Artificial lighting is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of the Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting. Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day.
Noise	
PO19 Noise generating uses do not adversely affect existing noise sensitive uses. Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line. Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.	No acceptable outcome provided.
PO20	AO20.1
Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:	Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.
a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport	AO20.2 Noise attenuation structures (e.g. walls, barriers or fences):

purposes (e.g. existing or future pedestrian paths are not visible from an adjoining road or public area a. or cycle lanes etc); unless: b. maintaining the amenity of the streetscape. i. adjoining a motorway or rail line; or adjoining part of an arterial road that does not ii. Note - A noise impact assessment may be required to demonstrate serve an existing or future active transport compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise. purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible. Note - Refer to Planning Scheme Policy - Integrated design for details and examples of noise attenuation structures. do not remove existing or prevent future active b. transport routes or connections to the street network: C. are located, constructed and landscaped in accordance with Planning scheme policy -Integrated design. Note - Refer to Planning scheme policy - Integrated design for details and examples of noise attenuation structures. Note - Refer to Overlay map - Active transport for future active transport routes. **Hazardous Chemicals**

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with '*State Planning Policy Guideline - Guidance on development involving hazardous chemicals*'.

Note - Terms used in this section are defined in 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO21

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.

AO21.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

- a. For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

	If criteria AO1.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.		
	A021.2		
	Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:		
	Dangerous Dose		
	a. For any hazard scenario involving the release of gases or vapours:		
	 i. AEGL2 (60minutes) or if not available ERPG2; ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure. 		
	 b. For any hazard scenario involving fire or explosion: i. 7kPa overpressure; 		
•.()	ii. 4.7kW/m2 heat radiation.		
	If criteria AO1.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.		
	AO21.3		
2 ann	Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:		
	Dangerous Dose		
20	a. For any hazard scenario involving the release of gases or vapours:		
	i. AEGL2 (60minutes) or if not available ERPG2;		
	ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.		
	b. For any hazard scenario involving fire or explosion:		
	i. 14kPa overpressure;		
	ii. 12.6kW/m2 heat radiation.		

If criteria AO1.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year. AO22 Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event. AO23 Storage areas containing packages of flammable and toxic hemoreties are designed with pail.
Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event. AO23 Storage areas containing packages of flammable and
hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event. AO23 Storage areas containing packages of flammable and
Storage areas containing packages of flammable and
toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.
A024.1
 The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively: a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.
A024.2
The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.
AO25.1
Development does not emit a gaseous plume into the airport's operational airspace at a velocity exceeding 4.3m per second.
AO25.2
Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

Clearing of habitat trees where not located within the Environmental areas overlay map			
PO26	No acceptable outcome provided		
a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.			
b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.			
c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner	O Jersie		
Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas	ne		
Works	criteria		
Utilities	~ C		
PO27 The development is connected to an existing reticulated electricity supply system approved by the relevant energy regulating authority.	AO27 Development is connected to underground electricity.		
PO28 The development has access to telecommunications and broadband services in accordance with current standards.	No acceptable outcome provided		
PO29	AO29.1		
The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to public health.	Where in a sewered area, the development is connected to a reticulated sewerage network.		
<i>h</i> .	AO29.2		
	Trade waste is pre-treated on-site prior to discharging into the sewerage network.		
PO30	AO30		
The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water.	Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the		

	South East Queensland Water Supply and Sewerage
	Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.
P031	No acceptable outcome provided
The development is provided with constructed and dedicated road access.	
Access	
PO32 Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.	No acceptable outcome provided
PO33	AO33.1
The layout of the development does not compromise: a. the development of the road network in the area; b. the function or safety of the road network; c. the capacity of the road network. Note - The road hierarchy is mapped on Overlay map - Road hierarchy.	The development provides for the extension of the road network in the area in accordance with Council's road network planning. AO33.2 The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning. AO33.3 The lot layout allows forward access to and from the site. AO33.4 For land located at Deception Bay, all vehicle access to Deception Bay Road is via a future 4-way signalised intersection at Deception Bay Road and Zammit Street, as illustrated in Figure - Deception Bay Road Mixed Industry and Business, except where an alternative
PO34 Safe access is provided for all vehicles required to access the site.	 access has been previously approved by TMR or allowed through an existing development approval. No direct property access is provided to Deception Bay Road. AO34.1 Site access and driveways are designed and located in accordance with: a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or
	b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in

	AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
	AO34.2
	Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design. Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.
	A034.3
	Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.
PO35	No acceptable outcome provided
 Upgrade works (whether trunk or non-trunk) are provided where necessary to: a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network; b. ensure the orderly and efficient continuation of the active transport network; c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design. Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment. Note - The road network is mapped on Overlay map - Road hierarchy. Note - The primary and secondary active transport network is mapped on Overlay map - Active transport. 	
Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:	
 Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or 	
 Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features 	

of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.	
Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.	
Stormwater	
PO36	No acceptable outcome provided
Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.	
Note - Refer to Planning scheme policy - Integrated design for details.	cion cion
Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.	C Jel
Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.	cheme
PO37	No acceptable outcome provided
Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site. Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.	
PO38	No acceptable outcome provided
Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP. Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.	
PO39 Easements for drainage purposes are provided over:	No acceptable outcome provided

 a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm; b. overland flow paths where they cross more than one property boundary. 	
Note - Refer to Planning scheme policy - Integrated design for details.	
Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.	
Site works and construction management	
PO40	No acceptable outcome provided
The site and any existing structures are maintained in a tidy and safe condition.	ci c
PO41	A041.1
 All works on-site are managed to: a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light; b. minimise as far as possible, impacts on the natural environment; c. ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises; d. avoid adverse impacts on street trees and their critical root zone. 	 Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following: a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions; b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion; c. stormwater discharge rates do not exceed pre-existing conditions; d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and e. the 50% AEP storm event is the minimum design storm for all silt barriers and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness.
	AO41.3 The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.

	AO41.4
	Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree.
PO42	AO42
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.	No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.
PO43	A043.1
All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.
Note - Where the amount of imported or exported material is greater than 50m ³ , a haulage route must be identified and approved by Council.	AO43.2
	All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.
	Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).
	AO43.3
Pla.	Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
PO44	AO44
All disturbed areas are rehabilitated at the completion of construction.	At completion of construction all disturbed areas of the site are to be:
Note - Refer to Planning scheme policy - Integrated design for details.	a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;b. grassed.
	Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.

 The clearing of vegetation on-site: a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land; c. is disposed of in a manner which minimises nuisance and annoyance to existing premises. Note - No burning of cleared vegetation is permitted. PO46 Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of	 All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works. AO45.2 Disposal of materials is managed in one or more of the following ways: a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site. Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.
public utility services is to be carried with the development and at no cost to Council.	
Earthworks	
PO47	AO47.1
On-site earthworks are designed to consider the visual and amenity impact as they relate to:a. the natural topographical features of the site;b. short and long-term slope stability;	All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.
c. soft or compressible foundation soils;d. reactive soils;	AO47.2
 e. low density or potentially collapsing soils; f. existing fill and soil contamination that may exist on-site; g. the stability and maintenance of steep rock slopes and batters; 	Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.
 h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential). Note - Filling or excavation works are to be completed within six months of the commencement date. 	AO47.3 Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.
	AO47.4

	All filling or excavation is contained on-site.
	AO47.5
	All fill placed on-site is:
	a. limited to that required for the necessary approved use;
	 b. clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).
	AO47.6 The site is prepared and the fill placed on-site in accordance with AS3798.
	Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.
PO48	AO48
Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.	Any embankments more than 1.5 metres in height are stepped, terraced and landscaped. Figure - Embankment
	Soonm 15m 15m 15m 15m 15m 15m 15m 15m 15m 15
PO49	AO49.1
Filling or excavation is undertaken in a manner that: a. does not adversely impact on a Council or public	No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.
 a. does not adversely impact on a council of public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land; b. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or 	Note - Public sector entity as defined in the Sustainable Planning Act 2009.
any drainage feature on, or adjacent to the land for	AO49.2
Monitoring, maintenance or replacement purposes.	Filling or excavation that would result in any of the following is not carried out on-site:
Act 2009.	 a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm;
	 an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.

	Note - Public sector entity as defined in the Sustainable Planning Act 2009.
PO50 Filling or excavation does not result in land instability. Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.	No acceptable outcome provided
 PO51 Development does not result in a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway; b. increased flood inundation outside the site; c. any reduction in the flood storage capacity in the floodway; d. and any clearing of native vegetation. Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements. 	No acceptable outcome provided.
Retaining walls and structures	
PO52 All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.	AO52 Earth retaining structures: a. are not constructed of boulder rocks or timber; b. where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary; Figure - Retaining on boundary

- reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or i.
- material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials. ii.
- iii.
- iv

AND

b. none of the following exceptions apply:

- i. the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
- ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

AO53.1

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO53

Development incorporates a fire fighting system that:

- a. satisfies the reasonable needs of the fire fighting entity for the area;
- b. is appropriate for the size, shape and topography of the development and its surrounds;
- c. is compatible with the operational equipment available to the fire fighting entity for the area;
- considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
- e. considers the fire hazard inherent in the surrounds to the development site;
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.*

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks⁽⁸⁴⁾ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

- b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- c. in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans;
 iii. for outdoor sales⁽⁵⁴⁾, processing or storage facilities,

iii. for outdoor sales⁽⁵⁴⁾, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales⁽⁵⁴⁾, outdoor processing and outdoor storage facilities;

d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.

AO53.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO53.3

	On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in <i>Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.</i>
PO54	AO54
On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.	 For development that contains on-site fire hydrants external to buildings: a. those external hydrants can be seen from the vehicular entry point to the site; or b. a sign identifying the following is provided at the vehicular entry point to the site:
	 i. the overall layout of the development (to scale); ii. internal road names (where used);
	iii. all communal facilities (where provided);
	iv. the reception area and on-site manager's office (where provided);
• • •	v. external hydrants and hydrant booster points;
	vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.
is anning	Note - The sign prescribed above, and the graphics used are to be: a. in a form;
	 b. of a size; c. illuminated to a level;
BRC	which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.
P055	A055
Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.	For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note <i>Fire hydrant indication system</i> produced by the Queensland Department of Transport and Main Roads.
	Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.

Note - The Road hierarchy is mapped on Overlay map - Road hierarchy	
PO68	No acceptable outcome provided.
Where located on a district collector, sub-arterial or arterial road, non-industrial uses:	
a. are consolidated with existing non-industrial uses;	
b. do not compromise the viability, role or function of the region's centre network;	
c. are not subject to adverse amenity impacts or risk to health;	
d. do not constrain the operations of industrial activities.	C ersie
Note - A Hazard and Nuisance Mitigation Plan may be required to be submitted to justify compliance with this outcome.	
Note - The Road hierarchy is mapped on Overlay map - Road hierarchy	ene
PO69	No acceptable outcome provided.
Traffic generated by non-industrial uses does not detrimentally impact upon the operation and functionality of the receiving road network.	S
PO70	No acceptable outcome provided.
The design of non-industrial buildings in the precinct:	
a. adds visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, a consistent building line, blank walls that are visible from public places are treated to not negatively impact the surrounding amenity);	
 b. contribute to a safe environment (e.g. through the use of lighting and avoiding concealed recesses or potential entrapment areas); 	
c. incorporate architectural features within the building facade at the street level to create human scale (e.g. awnings).	
d. are adaptable for future alternative industry uses.	
P071	A071.1
Building entrances:	The main entrance to the building is clearly visible from
a. are readily identifiable from the road frontage;	and addresses the primary street frontage.

b. add visual interest to the streetscape;	A071.2	
 c. are designed to limit opportunities for concealment; d. are located and oriented to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites. 	Where the building does not adjoin the street frontage, a dedicated and sealed pedestrian footpath is provided between the street frontage and the building entrance.	
Note - The design provisions for footpaths outlined in Planning scheme policy - Integrated design may assist in demonstrating compliance with this outcome.		
Major electricity infrastructure ⁽⁴³⁾ , Substation ⁽⁸⁰⁾ and	Utility installation ⁽⁸⁶⁾	
P072	A072.1	
 The development does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; c. not visually dominant or intrusive; d. located behind the main building line; e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures; f. camouflaged through the use of colours and materials which blend into the landscape; g. treated to eliminate glare and reflectivity; h. landscaped; i. otherwise consistent with the amenity and character of the zone and surrounding area. 	 Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment: a. are enclosed within buildings or structures; b. are located behind the main building line; c. have a similar height, bulk and scale to the surrounding fabric; d. have horizontal and vertical articulation applied to all exterior walls. AO72.2 A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.	
P073	A073	
Infrastructure does not have an impact on pedestrian	Access control arrangements:	
health and safety.	 a. do not create dead-ends or dark alleyways adjacent to the infrastructure; b. minimise the number and width of crossovers and entry points; c. provide safe vehicular access to the site; d. do not utilise barbed wire or razor wire. 	
P074	A074	
 All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility: a. generates no audible sound at the site boundaries where in a residential setting; or b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. 	All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.	
Telecommunications facility ⁽⁸¹⁾		

Editor's note - In accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾ must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.	
P075	A075.1
Telecommunications facilities ⁽⁸¹⁾ are co-located with existing telecommunications facilities ⁽⁸¹⁾ , Utility installation ⁽⁸⁶⁾ , Major electricity infrastructure ⁽⁴³⁾ or Substation ⁽⁸⁰⁾ if there is already a facility in the same coverage area.	New telecommunication facilities ⁽⁸¹⁾ are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.
D07	A075.2 If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.
PO76 A new Telecommunications facility ⁽⁸¹⁾ is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.	A076 A minimum of 45m ² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.
P077	A077
Telecommunications facilities ⁽⁸¹⁾ do not conflict with lawful existing land uses both on and adjoining the site.	The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.
P078	A078.1
 The Telecommunications facility⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; 	Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.
c. not visually dominant or intrusive;d. located behind the main building line;	A078.2
 below the level of the predominant tree canopy or the level of the surrounding buildings and structures; 	In all other areas towers do not exceed 35m in height.
 f. camouflaged through the use of colours and materials which blend into the landscape; 	A078.3
g. treated to eliminate glare and reflectivity;h. landscaped;	Towers, equipment shelters and associated structures are of a design, colour and material to:
i. otherwise consistent with the amenity and character of the zone and surrounding area.	a. reduce recognition in the landscape;b. reduce glare and reflectivity.
	A078.4

٦

Values and con Note - The relevant values and constraints criteria do not apply where Reconfiguring a lot or Material change of use or Operational work, wh	the development is consistent with a current Development permit for
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.	All equipment comprising the Telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.
P080	AO80
PO79 Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.	A079 An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.
	Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.
	Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.
	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses.
	A078.6
	AO78.5 The facility is enclosed by security fencing or by other means to ensure public access is prohibited.
	Where there is no established building line the facility is located at the rear of the site.
	All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.

Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply)

planning scheme.

Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m³ and 500m³ respectively.

P081	AO81
 Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development: a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment; b. protects the environmental and ecological values and health of receiving waters; c. protects buildings and infrastructure from the effects of acid sulfate soils. 	 Development does not involve: a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD.

Environmental areas (refer Overlay map - Environmental areas to determine if the following assessment criteria apply)

- Note The following are exempt from the native clearing provisions of this planning scheme:
- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

Vegetation clearing, ecological value and connectivity	
PO82	No acceptable outcome provided.

 Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that: a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded; b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*. * Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014. PO83 Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by: a. retaining habitat trees; b. providing contiguous patches of habitat; c. provide replacement and rehabilitation planting to improve connectivity; d. avoiding the creation of fragmented and isolated patches of habitat; e. providing wildlife movement infrastructure. Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. 	No acceptable outcome provided.
Vegetation clearing and habitat protection	
PO84	No acceptable outcome provided.
Development ensures that the biodiversity quality and	
integrity of habitats is not adversely impacted upon but maintained and protected.	

Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:		
 rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; 		
 provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; 		
c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.		
PO86	No acceptable outcome provided.	
Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:	C est	
a. providing contiguous patches of habitat;b. avoiding the creation of fragmented and isolated patches of habitat;		
c. providing wildlife movement infrastructure;d. providing replacement and rehabilitation planting to improve connectivity.	en	
Vegetation clearing and soil resource stability		
P087	No acceptable outcome provided.	
Development does not:		
a. result in soil erosion or land degradation;b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.		
Vegetation clearing and water quality		
P088	No acceptable outcome provided.	
Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:		
 ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads; 		
b. avoiding or minimising changes to landforms to		
 maintain hydrological water flows; adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities. 		
PO89	No acceptable outcome provided.	
	No acceptable outcome provided.	
Development minimises adverse impacts of stormwater run-off on water quality by:		

 minimising flow velocity to reduce erosion; minimising hard surface areas; maximising the use of permeable surfaces; incorporating sediment retention devices; minimising channelled flow. Vegetation clearing and access, edge effects and urban heat island effects PO90 Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment. PO91 Development minimises potential adverse 'edge effects' on ecological values by: a. providing dense planting buffers of native vegetation of possible size where located between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas; c. restoring, rehabilitating and increasing the size of existing patches of native vegetation; of ensuring with native plants of local origin. Editors note - Edge effects and concess (public and vehicles) and acreasing of naturation and density of naturation and density of naturation and density of naturation; e. Inadscaping with native plants of local origin. Editors note - Edge effects and concess (public and vehicles) are subtack as far as possible from environmental areas; for starting and increased the frequency on dhanges in the groundwater and surfaces water flow. PO92 Development avoids adverse increasing the size of the artistic and effects. Adverse urban heat island effects and grees in the groundwater and surfaces the minimised by: a. perviols durberse increasing the species to achieve well-shaded urban places; b. providing the espirated traban places; b. providing the espirate of the urban forest cancey. <li< th=""><th>PO93</th><th>No acceptable outcome provided.</th></li<>	PO93	No acceptable outcome provided.
 minimising hard surface areas; maximising the use of permeable surfaces; incorporating sediment retention devices; minimising channelled flow. Vegetation clearing and access, edge effects and urban heat island effects PO90 Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment. PO91 Development minimises potential adverse 'edge effects' on ecological values by: a. providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development many of natural organization and deney of natural organization and environmental areas; c. restoring, rehabilitating and increasing the size of existing patches of native vegetation; d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas. Factos inclide wead invisoon between ad cordiors; e. landscaping with native plants of local orgin. Editors note - Edge effects are factors of development matgo to invisoon between development that on a distribution, increased ins frequency and changes in the groundwater and surfaces; b. providing deeply planted vegetation buffers and green linkage opportunities; c. landscaping with local native plants of local orgin. Editors note - Edge effects are factors of development that go to invisoon between located between a development that on the adverse edge and does not result in increased time trave access, nuclei use of natural organ. Factors inclide wead information increased instreament insteament at the finge optimulation and enviso in adverse edge. FO32 No acceptable outcome provided. PO932 No acceptable outcome provided. Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment. No acceptable outcome provided. PO91 No acceptable outcome provided. PO91 Development minimises potential adverse 'edge effects' on ecological values by: a. providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation, between a development and environmental areas; c. restoring, rehabilitating and increasing the size of existing patches of native vegetation; d. ensuring that buildings and access (public and vehicle) are setta as possible from environmental areas and corridors; e. landscaping with native plants of local origin. Editor's note - Edge effects are factors of development that go to detimentally affecting the composition and density of natural populations at the finge of nature veces and corridors; e. landscaping with native plants of local origin. Editor's note - Edge effects are factors of development that go to detimentally affecting the composition and density of natural populations at the finge of nature and environment the detimentally affecting the composition and density of natural populations at the finge of nature and ensities and the meet of access, nutrient (pads, noise and instruments)	 Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by: a. pervious surfaces; b. providing deeply planted vegetation buffers and green linkage opportunities; c. landscaping with local native plant species to achieve well-shaded urban places; d. increasing the service extent of the urban forest 	No acceptable outcome provided.
 b. minimising hard surface areas; c. maximising the use of permeable surfaces; d. incorporating sediment retention devices; e. minimising channelled flow. Vegetation clearing and access, edge effects and urban heat island effects PO90 Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values No acceptable outcome provided.	 Development minimises potential adverse 'edge effects' on ecological values by: a. providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas; c. restoring, rehabilitating and increasing the size of existing patches of native vegetation; d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors; e. landscaping with native plants of local origin. Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the 	No acceptable outcome provided.
 b. minimising hard surface areas; c. maximising the use of permeable surfaces; d. incorporating sediment retention devices; e. minimising channelled flow. 	Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values	No acceptable outcome provided.
 b. minimising hard surface areas; c. maximising the use of permeable surfaces; d. incorporating sediment retention devices; 	Vegetation clearing and access, edge effects and urb	oan heat island effects
	b. minimising hard surface areas;c. maximising the use of permeable surfaces;d. incorporating sediment retention devices;	

Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas. Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.	
Extractive resources separation area (refer Overlay mains if the following assessment criteria apply) Note - To demonstrate achievement of the performance outcomes, a person. Guidance to preparing noise impact assessment report is pro-	
PO94	A094
Development does not increase the number of people living in the Extractive Resources separation area.	One dwelling house ⁽²²⁾ permitted per lot within separation area.
PO95	AO95
Development: a. does not introduce or increase uses that are	Development within the separation area does not include the following activities:
 sensitive to the impacts of an Extractive industry⁽²⁷⁾; is compatible with the operation of an Extractive industry⁽²⁷⁾; 	 a. Caretaker's accommodation⁽¹⁰⁾; b. Community residence⁽¹⁶⁾; c. Dual occupancy⁽²¹⁾;
 c. does not comprise or undermine the function and integrity of the separation area in providing a buffer between key extractive and processing activities and sensitive, incompatible uses outside the separation area. 	 d. Dwelling unit⁽²³⁾; e. Hospital⁽³⁶⁾; f. Rooming accommodation⁽⁶⁹⁾; g. Multiple dwelling⁽⁴⁹⁾; h. Non-resident workforce accommodation⁽⁵²⁾; i. Relocatable home park⁽⁶²⁾; j. Residential care facility⁽⁶⁵⁾; k. Resort complex⁽⁶⁶⁾; l. Retirement facility⁽⁶⁷⁾; m. Rural workers' accommodation⁽⁷¹⁾; n. Short-term accommodation⁽⁷⁷⁾; o. Tourist park⁽⁸⁴⁾.
PO96	AO96
Habitable rooms achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.	 All habitable rooms within the separation area are: a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008; b. provided with mechanical ventilation.
PO97	AO97
Development provides open space areas for passive recreation in a manner where impacts from key extractive/processing activities, particularly noise, is minimised.	Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

PO9	8	AO98
Deve a. b. c.	 elopment: does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route; does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes; adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to: i. locating the furthest distance possible from the transportation route; ii. habitable rooms being located the furthest from the transportation route; iii. shielding and screening private outdoor recreation space from the transportation route; 	 The following uses are not located within the 100m wide transport route buffer: a. Caretaker's accommodation⁽¹⁰⁾, except where located in the Extractive industry zone; b. Community residence⁽¹⁶⁾; c. Dual occupancy⁽²¹⁾; d. Dwelling house⁽²²⁾; e. Dwelling unit⁽²³⁾; f. Hospital⁽³⁶⁾; g. Rooming accommodation⁽⁶⁹⁾; h. Multiple dwelling⁽⁴⁹⁾; i. Non-resident workforce accommodation⁽⁵²⁾; j. Relocatable home park⁽⁶²⁾; k. Residential care facility⁽⁶⁵⁾; l. Resort complex⁽⁶⁶⁾; m. Retirement facility⁽⁶⁷⁾; n. Rural workers' accommodation⁽⁷⁷¹⁾; o. Short-term accommodation⁽⁷⁷¹⁾; p. Tourist park⁽⁸⁴⁾.
PO9 Deve a. b.	elopment: does not adversely impact upon the efficient and effective transportation of extractive material along a transportation route; ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility; utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard.	AO99.1 Development does not create a new vehicle access point onto an Extractive resources transport route. AO99.2 A vehicle access point is located, designed and constructed in accordance with Planning scheme policit - Integrated design.

Note - To assist in demonstrating achievement of heritage performance outcomes, a Cultural heritage impact assessment report is prepared by a suitably qualified person verifying the proposed development is in accordance with The Australia ICOMOS Burra Charter.

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

PO1	100	AO100
Dev a. b. c. d. e. f.	elopment will: not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building; protect the fabric and setting of the heritage site, object or building; be consistent with the form, scale and style of the heritage site, object or building; utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes; incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building; retain public access where this is currently provided.	Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value. Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.
of c sym valu beir pub	ere development is occurring on land adjoining a site ultural heritage value, the development is to be pathetic to and consistent with the cultural heritage les present on the site and not result in their values ag eroded, degraded or unreasonably obscured from lic view. Short-term accommodation ⁽⁷⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷¹⁾ ; p. Tourist park ⁽⁶⁴⁾ .
PO106	AO106
Habitable rooms within an Electricity supply substation buffer are located a sufficient distance from substations ⁽⁸⁰⁾ to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields.	Habitable rooms:

Note - Habitable room is defined in the Building Code of Australia (Volume 1)	 a. are not located within an Electricity supply substation buffer; and b. proposed on a site subject to an Electricity supply supply substation⁽⁸⁰⁾ are acoustically insulted to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008. Note - Habitable room is defined in the Building Code of Australia (Volume 1)
PO107	No acceptable outcome provided.
Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation ⁽⁸⁰⁾ to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.	
Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy – Noise.	
Note - Habitable room is defined in the Building Code of Australia (Volume 1)	Cher .
PO108	AO108
Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development	buildings or structures within a High voltage electricity
 a. is located and designed to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields in accordance with the principle of prudent avoidance; b. is located and designed in a manner that maintains a high level of security of supply; c. is located and design so not to impede upon the functioning and maintenance of high voltage electrical infrastructure. 	
PO109	AO109
Development within a Pumping station buffer is located designed and constructed to:	Development does not involve the construction of any buildings or structures within a Pumping station buffer.
 ensure that odour or other air pollutant impacts or the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008; 	
b. ensure that noise impacts on the amenity of the	

Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply)	
Note - The applicable river and creek flood planning levels associated obtained by requesting a flood check property report from Council.	d with defined flood event (DFE) within the inundation area can be
PO110	A0110
Development:	No acceptable outcome provided.
 a. minimises the risk to persons from overland flow; b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. 	
PO111	A0111
Development:	No acceptable outcome provided.
 a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment; b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property. 	neme
Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.	SC
P0112	No acceptable outcome provided.
 Development does not: a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level; b. increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure. Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring. 	
PO113	A0113
Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.	Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.

	Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.
PO114 Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.	AO114 Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.
PO115 Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow	 AO115.1 Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM: a. Urban area – Level III; b. Rural area – Level III; b. Rural area – Level V; c. Industrial area – Level V; d. Commercial area – Level V. AO115.2 Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.
 PO116 Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over: a. a stormwater pipe if the nominal pipe diameter exceeds 300mm; b. an overland flow path where it crosses more than one premises; c. inter-allotment drainage infrastructure. Note - Refer to Planning scheme policy - Integrated design for details and examples. Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM. 	No acceptable outcome provided.
Additional criteria for development for a Park ⁽⁵⁷⁾	
PO117	PO117

Development for a Park ⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:	Development for a Park ⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.
a. public benefit and enjoyment is maximised;	
b. impacts on the asset life and integrity of park structures is minimised;	
c. maintenance and replacement costs are minimised.	
Riparian and wetland setbacks	
PO118	AO118
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:	Development does not occur within: a. 50m from top of bank for W1 waterway and drainage line
a. impact on fauna habitats;	 b. 30m from top of bank for W2 waterway and drainage line
b. impact on wildlife corridors and connectivity;	c. 20m from top of bank for W3 waterway and
c. impact on stream integrity;	drainage line
d. impact of opportunities for revegetation and rehabilitation planting;	d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.
e. edge effects.	Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

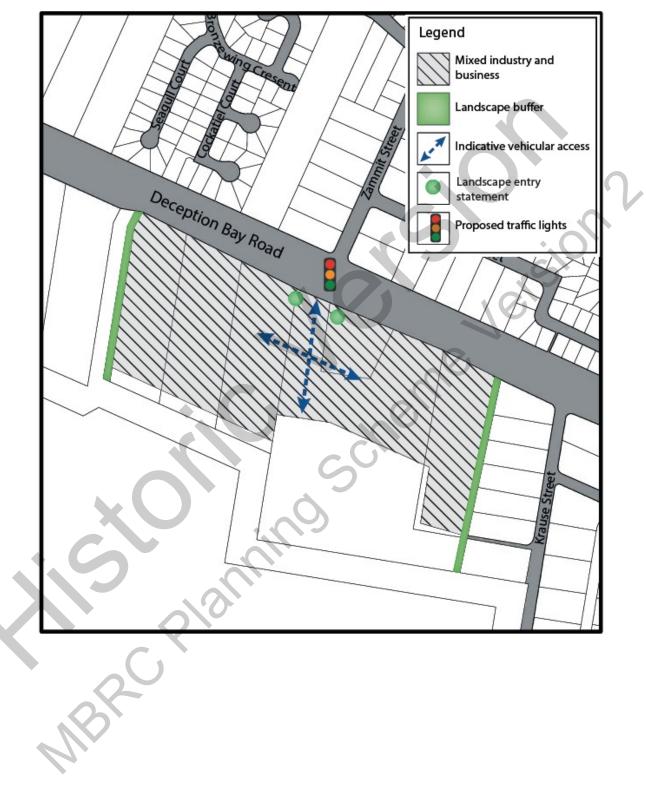

Figure - Deception Bay Road Mixed Industry and Business

6.2.7.2 Light industry precinct

6.2.7.2.1 Purpose - Light industry precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the Light industry precinct:
 - a. A range of industrial activities are established in the precinct which are of a low intensity and scale, with minimal off-site impacts and no adverse impacts on surrounding sensitive land uses.
 - b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.
 - c. Industrial activities which involve a high level of contact with the general public are located along arterial, sub-arterial and collector roads.
 - d. Industrial activities are located, designed and managed to:
 - i. maintain the health and safety of people;
 - ii. avoid significant adverse effects on the natural environment;
 - iii. minimise the possibility of adverse impacts on nearby non-industrial uses.
 - e. Development has access to infrastructure and essential services and convenient access to major transport routes.
 - f. Non-industrial uses occurring in the precinct:
 - i. Do not compromise or constrain the operation or viability of existing or future industrial activities;
 - ii. Are subordinate in function and scale to all centres within the region;
 - iii. Do not undermine the viability of existing or future centres or neighbourhood hubs;
 - iv. Are consolidated to minimise adverse impacts on the efficient functioning of industrial activities;
 - v. Provide a convenience service or support role to industries and employees in the precinct; or
 - vi. Where not providing a convenience service or support role, development:
 - A. Is located on a district collector, sub-arterial or arterial road;
 - B. Does not generate large amounts of vehicle traffic during operating hours of industry;
 - C. Cannot reasonably be located within a zone suited to the type of development
 - g. Development is designed to incorporate sustainable practices, including water sensitive design and energy efficient building design.
 - h. The scale, character and built form of development and the resulting streetscape contribute to a high standard of visual and physical amenity and incorporates crime prevention through environmental design (CPTED) principles.
 - i. Special industry⁽⁷⁹⁾ does not occur within the precinct.
 - j. The continued operation of Places of worship⁽⁶⁰⁾ and Medium impact industries⁽⁴⁷⁾ that were lawfully established at commencement is supported. Any extensions to these uses need to satisfy the outcomes of this code.

- k. With the exception of Caretaker's accommodation⁽¹⁰⁾, sensitive land uses do not occur within the precinct.
- I. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
- m. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
- n. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
- o. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
- p. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - **C**. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
 - viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
 - ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;

- x. ensuring effective and efficient disaster management response and recovery capabilities;
- xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- q. Development in the Light industry precinct includes one or more of the following:

•	Agricultural supplies store ⁽²⁾	•	Educational establishment ⁽²⁴⁾ (where for	•	Medium Impact Industry ⁽⁴⁷⁾
•	Animal husbandry ⁽⁴⁾		technical and trade related		(if 250m or greater from a sensitive zone)
•	Aquaculture ⁽⁶⁾ (where in a		education only)	•	Outdoor sales ⁽⁵⁴⁾
	building)		Emergency services ⁽²⁵⁾		Research and technology
•	Bulk landscape supplies ⁽⁹⁾	•	Food and drink outlet ⁽²⁸⁾ (where not exceeding	0	industry ⁽⁶⁴⁾
•	Caretaker's accommodation ⁽¹⁰⁾		100m ² GFA)	•	Sales office ⁽⁷²⁾

s. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.2.2 Criteria for assessment

Part C—Criteria for assessable development - Light industry precinct

Table 6.2.7.2.1 Assessable	development - Light industry precinct

Perf	ormance outcomes	Acceptable outcomes
	General	criteria
Site	cover	5
PO1		No acceptable outcome provided.
Site	cover is limited to a proportion of a site that ensures:	
a.	A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;	
b.	Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;	
C.	setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;	
d.	Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.	
Buil	ding height	
PO2		AO2
		Building height does not exceed the maximum height identified on Overlay map - Building heights.

Performar	nce outcomes	Acceptable outcomes
industrial c	of buildings is in keeping with the predominant haracter of the precinct and does not cause nenity impacts on nearby sensitive land uses	
Setbacks		
PO3		AO3
Street bour	ndary setbacks:	Buildings maintain a minimum setback of:
a. minin the st	nise building bulk and visual dominance from treet;	a. 6m to the primary frontage (other than the Bruce Highway);
b. provio site;	de areas for landscaping at the front of the	b. 3m to the secondary frontage;
	for customer parking to be located at the front building;	c. 10m to a boundary adjoining the Bruce Highway.
scree	de opportunities for dense landscaping to en at maturity any visibility of development of from the Bruce Highway.	ne
PO4		A04
	ear boundary setbacks maintain views, privacy, natural light and the visual amenity of adjoining and uses.	Where a development adjoins general residential zone land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed alon the boundary to provide screening of the development with a mature height of at least 3m. Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes
Building a	ppearance and design	
road, or vis buildings p which adds the perceiv a. a rang b. facad c. desig	ating a district collector, sub-arterial or arterial sible from a Park ⁽⁵⁷⁾ , or a centre zoned lot, rovide a high level of architectural design a visual interest to the streetscape and reduces yed bulk of the building, by incorporating: ge of building materials, colours and features; le articulation along street frontages; in features to promote customer entry points; rials that are not highly reflective.	No acceptable outcome provided.
Note - The r	oad hierarchy is mapped on Overlay map - Road	

Performance outcomes	Acceptable outcomes
P07	A07
Staff are provided with adequate and amenable break/dining facilities to suit the nature of the activities on-site.	Where the nature of the activities on-site do not allow staff to eat in their work environment, the development provides an on-site recreation area for staff that:
	a. Includes adequate seating, tables and rubbish bins for the number of staff onsite;
	b. is adequately protected from the weather;
	c. is safely accessible to all staff;
	d. is separate and private from public areas;
	e. is located away from a noisy or odorous activity.
Landscaping	0
P08	A08
Landscaping is provided on the site to:	Landscaping is provided and maintained in accordance with Planning scheme policy - Integrated design.
a. visually soften the built form, areas of hardstand, storage areas and mechanical plant associated with the on-site activities;	
b. complement the existing or desired streetscape;	C
c. minimise the impact of industrial development on adjoining lots not zoned for industrial purposes.	
Fencing	P
P09	AO9
The provision of fencing on street frontages does not dominate the streetscape or create safety issues.	Where fencing is provided on the street frontage, fence sections between columns or posts have a minimum transparency of 70% spread evenly across its total
Note - The following example illustrates an acceptable design response to this outcome.	surface area.

Bicycle parking and end of trip facilities		
	Bicycle parking and end of trip facilities	

Performance outcomes	Acceptable outcomes
Note - Building work to which this code applies constitutes Major Dev facilities prescribed in the Queensland Development Code MP 4.1.	velopment for purposes of development requirements for end of trip
PO13	A013.1
 a. End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include: adequate bicycle parking and storage facilities; and adequate provision for securing belongings; and change rooms that include adequate showers, sanitary compartments, wash basins and mirrors. b. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be unreasonable to provide these facilities having regard to: the projected population growth and forward planning for road upgrading and development of cycle paths; or whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters. Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.	 Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities required by Council. AO13.2 Bicycle parking is: a. provided in accordance with Austroads (2008), Guide to Traffic Management - Part 11: Parking; b. protected from the weather by its location or a dedicated roof structure; c. located within the building or in a dedicated, secure structure for residents and staff; d. adjacent to building entrances or in public areas for customers and visitors. Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities required by Council.
has been reproduced here solely for information purposes. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
Loading and servicing	
PO14 Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads. Note - If landscaping is proposed for screening purposes, refer to Planning scheme policy - Integrated design for determining acceptable levels.	No acceptable outcome provided.
Waste	
P015 Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste.	No acceptable outcome provided.
Environmental impacts	
PO16 Where a use is not an environmentally relevant activity under the Environmental Protection Act, the release of any containment that may cause environmental harm is	AO16 Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.
mitigated to an acceptable level.	
	4017
PO17	A017

Performance outcomes	Acceptable outcomes
Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting. Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day
Noise	
PO18 Noise generating uses do not adversely affect existing or potential noise sensitive uses. Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line. Note - A noise impact assessment may be required to demonstrate compliance with this performance outcome. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.	No acceptable outcome provided.
PO19 Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:	AO19.1 Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise
 a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of parks, streets and roads that serve active transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc); b. maintaining the amenity of the streetscape. Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise. Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures. 	 AO19.2 Noise attenuation structures (e.g. walls, barriers or fences): a. are not visible from an adjoining road or public area unless: i. adjoining a motorway or rail line; or ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible. b. do not remove existing or prevent future active transport routes or connections to the street network; c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design. Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Performance outcomes	Acceptable outcomes
	Note - Refer to Overlay map – Active transport for future active transport routes.
Hazardous Chemicals Note - To assist in demonstrating compliance with the following perfor be prepared and submitted by a suitably qualified person in accordan <i>involving hazardous chemicals</i> '. Note - Terms used in this section are defined in ' <i>State Planning Policy</i> '	ce with 'State Planning Policy Guideline - Guidance on development
PO20	AO20.1
Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.	 Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below: Dangerous Dose a. For any hazard scenario involving the release of gases or vapours: i. AEGL2 (60minutes) or if not available ERPG2; ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure. b. For any hazard scenario involving fire or explosion: i. 7kPa overpressure; ii. 4.7kW/m2 heat radiation. If criteria AO21.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year. AO20.2 Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below: Dangerous Dose a. For any hazard scenario involving the release of gases or vapours:

Performance outcomes	Acceptable outcomes
	 i. AEGL2 (60minutes) or if not available ERPG2; ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
	 b. For any hazard scenario involving fire or explosion: i. 7kPa overpressure; ii. 4.7kW/m2 heat radiation.
	If criteria AO21.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.
	AO20.3 Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:
	Dangerous Dose a. For any hazard scenario involving the release of gases or vapours:
	 i. AEGL2 (60minutes) or if not available ERPG2; ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
	 b. For any hazard scenario involving fire or explosion: i. 14kPa overpressure;
	ii. 12.6kW/m2 heat radiation.
NBr	If criteria AO21.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.
PO21	AO21
Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.	Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.
PO22	A022
	Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum

Performance outcomes	Acceptable outcomes
Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.	of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.
PO23	A023.1
Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.	 The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively: a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.
	AO23.2 The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.
Emissions into Brisbane operational airspace	5
PO24	A024.1
Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport's operational airspace.	Development does not emit a gaseous plume into the airport's operational airspace at a velocity exceeding 4.3m per second.
Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport's operational airspace.	A024.2
BRC	Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.
Clearing of habitat trees where not located within the	e Environmental areas overlay map
PO25	No acceptable outcome provided
a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	
 Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where 	

Performance outcomes	Acceptable outcomes
 hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed. c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but is rehabilitated in a time but period of time but period period of time but period period period of time but period pe	
a timely manner Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas	
Works	criteria
Utilities	0
PO26	AO26
The development is connected to an existing reticulated electricity supply system approved by the relevant energy regulating authority.	Development is connected to underground electricity.
PO27	No acceptable outcome provided
The development has access to telecommunications and broadband services in accordance with current standards.	SCIE
PO28	AO28.1
The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to public health.	Where in a sewered area, the development is connected to a reticulated sewerage network.
Plain	AO28.2 Trade waste is pre-treated on-site prior to discharging into the sewerage network.
PO29	AO29
The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water.	Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.
PO30	No acceptable outcome provided
The development is provided with constructed and dedicated road access.	

Performance outcomes	Acceptable outcomes
Access	
PO31 Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.	No acceptable outcome provided
PO32	AO32.1
The layout of the development does not compromise: a. the development of the road network in the area; b. the function or safety of the road network; c. the capacity of the road network. Note - The road hierarchy is mapped on Overlay map - Road hierarchy.	The development provides for the extension of the road network in the area in accordance with Council's road network planning. AO32.2 The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning. AO32.3 The lot layout allows forward access to and from the site.
	AO32.4 Vehicle access is not permitted via Foster Road for lots located in the Burpengary East Light industry precinct, as per Figure - Burpengary East Light Industry Access Restriction.
PO33	AO33.1
Safe access is provided for all vehicles required to access the site.	 Site access and driveways are designed and located in accordance with: a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
	AO33.2 Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design. Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.

Performance outcomes	Acceptable outcomes
	AO33.3
	Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.
PO34	No acceptable outcome provided
 Upgrade works (whether trunk or non-trunk) are provided where necessary to: a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network; b. ensure the orderly and efficient continuation of the active transport network; c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design. Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment. Note - The road network is mapped on Overlay map - Road hierarchy. Note - The primary and secondary active transport network is mapped on Overlay map - Active transport. Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows: i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated design for road 	scheme
network and active transport network design standards.	
Stormwater	T
PO35	No acceptable outcome provided
Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.	

Performance outcomes	Acceptable outcomes
Note - Refer to Planning scheme policy - Integrated design for details.	
Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.	
Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is discharged into a catchment that includes State Transport Infrastructure.	
PO36 Stormwater generated from the development does not compromise the capacity of existing stormwater	No acceptable outcome provided
infrastructure downstream of the site. Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.	enne
P037	No acceptable outcome provided
Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP. Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.	5
 PO38 Easements for drainage purposes are provided over: a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm; b. overland flow paths where they cross more than and property beyoden; 	No acceptable outcome provided
one property boundary. Note - Refer to Planning scheme policy - Integrated design for details.	
Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.	
Site works and construction management	
Site works and construction management	

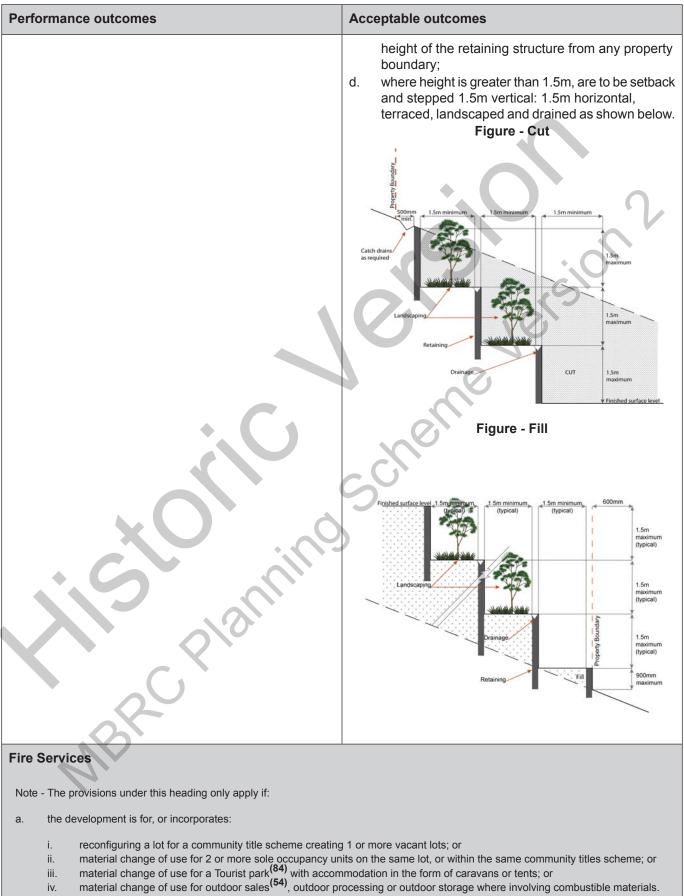

Performance outcomes	Acceptable outcomes
The site and any existing structures are maintained in a tidy and safe condition.	
PO40	AO40.1
 All works on-site are managed to: a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light; b. minimise as far as possible, impacts on the natural environment; c. ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises; d. avoid adverse impacts on street trees and their critical root zone. 	 Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following: a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions; b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion; c. stormwater discharge rates do not exceed pre-existing conditions; d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and e. the 50% AEP storm event is the minimum design storm for all silt barriers and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness. Note - The measures are adjusted on-site to maximise their effectiveness. AO40.3 The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.
PO41	AO41
	No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

Performance outcomes	Acceptable outcomes
Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.	
PO42	AO42.1
All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.
than 50m ³ , a haulage route must be identified and approved by Council.	A042.2
	All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads.
	Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).
×O	AO42.3 Any material dropped, deposited or spilled on the road(s as a result of construction processes associated with the site are to be cleaned at all times.
PO43	AO43
All disturbed areas are rehabilitated at the completion of construction.	At completion of construction all disturbed areas of the site are to be:
Note - Refer to Planning scheme policy - Integrated design for details.	a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;b. grassed.
BR	Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.
PO44	AO44.1
The clearing of vegetation on-site:a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; andb. includes the removal of declared weeds and other	All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works. Note - No parking of vehicles of storage of machinery or goods is
materials which are detrimental to the intended use of the land;	to occur in these areas during development works.
c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.	AO44.2

Performance outcomes	Acceptable outcomes
Note - No burning of cleared vegetation is permitted.	 Disposal of materials is managed in one or more of the following ways: a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site. Note - The chipped vegetation must be stored in an approved
PO45	location, preferably a park or public land.
Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.	le ne jei
Earthworks	
PO46	AO46.1
On-site earthworks are designed to consider the visual and amenity impact as they relate to:a. the natural topographical features of the site;b. short and long-term slope stability;	All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.
c. soft or compressible foundation soils;d. reactive soils;	AO46.2
 e. low density or potentially collapsing soils; f. existing fill and soil contamination that may exist on-site; g. the stability and maintenance of steep rock slopes 	Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.
and batters;h. excavation (cut) and fill and impacts on the amenity	AO46.3
of adjoining lots (e.g. residential). Note - Filling or excavation works are to be completed within six months of the commencement date.	Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.
	AO46.4
	All filling or excavation is contained on-site.
	AO46.5
	All fill placed on-site is:

Performance outcomes	Acceptable outcomes
	 a. limited to that required for the necessary approved use; b. clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).
	AO46.6
	The site is prepared and the fill placed on-site in accordance with AS3798. Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.
PO47 Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the	AO47 Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.
surrounding area.	Figure - Embankment
	15m 15m min 15
PO48	AO48.1
 Filling or excavation is undertaken in a manner that: a. does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land; b. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for 	No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity. Note - Public sector entity as defined in the Sustainable Planning Act 2009.
	AO48.2
monitoring, maintenance or replacement purposes. Note - Public sector entity as defined in the Sustainable Planning	Filling or excavation that would result in any of the following is not carried out on-site:
Act 2009.	 a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm; b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.
	Note - Public sector entity as defined in the Sustainable Planning Act 2009.
PO49	No acceptable outcome provided

Performance outcomes	Acceptable outcomes
Filling or excavation does not result in land instability. Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.	
PO50	No acceptable outcome provided.
 Development does not result in a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway; b. increased flood inundation outside the site; c. any reduction in the flood storage capacity in the floodway; d. and any clearing of native vegetation. 	C S or sion
Note - To demonstrate compliance with this outcome, Planning Scheme Policy - Stormwater Management provides guidance on the preparation of a site based stormwater management plan by a suitably qualified professional. Refer to Planning scheme policy - Integrated design for guidance on infrastructure design and modelling requirements.	heme
PO51 All earth retaining structures provide a positive interface with the streetscape and minimise impacts on the amenity of adjoining residents.	 AO51 Earth retaining structures: a. are not constructed of boulder rocks or timber; b. where height is no greater than 900mm, are provided in accordance with Figure - Retaining on a boundary;
	Figure - Retaining on boundary
MBR	Finished surface level Fill Retaining Retaining
	c. where height is greater than 900mm but no greater than 1.5m, are to be setback at least the equivalent

AND

b. none of the following exceptions apply:

Performance outcomes	Acceptable outcomes
 i. the distributor-retailer for the area has indicated, in its net water supply; or ii. every part of the development site is within 60m walking o water supply network, measured around all obstructions Note - The provisions under this heading do not apply to buildings that system complying with Australian Standard AS 2419.1 (2005) – Fire Hy protection. PO52 Development incorporates a fire fighting system that: 	serv plan, that the premises will not be served by that entity's reticulated distance of an existing fire hydrant on the distributor-retailer's reticulated s, either on or adjacent to the site. at are required by the Building Code of Australia to have a fire hydrant drant Installations or other fire fighting facilities which provide equivalent AO52.1 External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of <i>Australian</i>
 a. satisfies the reasonable needs of the fire fighting entity for the area; b. is appropriate for the size, shape and topography of the development and its surrounds; c. is compatible with the operational equipment available to the fire fighting entity for the area; d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another; e. considers the fire hazard inherent in the surrounds to the development site; f. is maintained in effective operating order. Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.	 Standard AS 2419.1 (2005) – Fire Hydrant Installations. Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable: a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks ⁽⁸⁴⁾ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative; b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005); c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that: i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings; ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; iii. for outdoor sales⁽⁵⁴⁾, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales⁽⁵⁴⁾, outdoor processing and outdoor storage facilities; d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.
MBR	 AO52.2 A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land: a. an unobstructed width of no less than 3.5m; b. an unobstructed height of no less than 4.8m; c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance; d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

Performance outcomes	Acceptable outcomes
	On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.
PO53	AO53
On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.	 For development that contains on-site fire hydrants external to buildings: a. those external hydrants can be seen from the vehicular entry point to the site; or b. a sign identifying the following is provided at the vehicular entry point to the site: the overall layout of the development (to scale); ii. internal road names (where used); iii. all communal facilities (where provided); iv. the reception area and on-site manager's office (where provided); v. external hydrants and hydrant booster points; vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrants and hydrants Note - The sign prescribed above, and the graphics used are to be: in a form; of a size; illuminated to a level;
PO54 Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.	AO54 For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note <i>Fire hydrant indication system</i> produced by the Queensland Department of Transport and Main Roads.

Performance outcomes	Acceptable outcomes
	Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.
Use specif	fic criteria
Industrial land uses	
PO55 Ancillary office ⁽⁵³⁾ , administration functions, retail sales and customer service components do not compromise the primary use of the site for industrial purposes or compromise the viability, role or function of the region's centres network.	AO55 The combined area of ancillary non-industrial activities, including but not limited to offices ⁽⁵³⁾ , administration functions, display and retail sale of commodities, articles or goods resulting from the industrial processes on-site, does not exceed 30% of the GFA or 500m ² , whichever is the lesser.
PO56	No acceptable outcome provided.
Buildings directly adjoining non-industrial zoned land:	
a. are compatible with the character of the adjoining area;b. minimise overlooking and overshadowing;	
c. maintain privacy;	CCI.
d. do not cause significant loss of amenity to neighbouring residents by way of noise, vibration, odour, lighting, traffic generation and hours of operation.	
PO57	No acceptable outcome provided.
Medium impact industry ⁽⁴⁷⁾ uses only establish in the precinct where: a. buildings and activities are located at least 250m from a sensitive land use or sensitive zone;	
b. not constraining the function or viability of existing or future uses in the precinct;	
c. not adversely affecting the amenity, health or safety of employees and visitors of the surrounding uses;	
 not adversely affecting the amenity, health or safety of nearby sensitive land uses. 	
Note - Separation distances are to be measured in a straight line, in accordance with the State policy.	
PO58	No acceptable outcome provided.

. •	ormance outcomes	Acceptable outcomes
offic arch such	-industrial components of buildings (including es ⁽⁵³⁾ and retail areas) are designed as high quality itectural features and incorporate entry area elements as forecourts, awnings and the architectural ment of roof lines and fascias.

Non	-industrial uses:	
a.	are consolidated with existing non-industrial uses in the precinct;	
b.	do not compromise the viability, role or function of the region's centre network;	

Performance outcomes	Acceptable outcomes
 c. are not subject to adverse amenity impacts or risk to health from industrial activities; d. do not constrain the function or viability of existing or future industrial activities in the surrounding area. 	
Note - The submission of a Hazard and Nuisance Mitigation Plan may be required to justify compliance with this outcome.	
PO67	No acceptable outcome provided.
Where located on a local collector or access street, non-industrial uses provide only direct convenience or support services to the industrial workforce. Note - The road hierarchy is mapped on Overlay map - Road hierarchy	C Jersion
PO68	No acceptable outcome provided.
Traffic generated by non-industrial uses does not detrimentally impact the operation and functionality of the external road network.	neme
PO69	No acceptable outcome provided.
 The design of non-industrial buildings in the precinct: a. adds visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, a consistent building line, blank walls that are visible from public places are treated to not negatively impact the surrounding amenity); b. contributes to a safe environment (e.g. through the use of lighting and not resulting in concealed recesses or potential entrapment areas); c. incorporates architectural features within the building facade at the street level to create human scale (e.g. awnings). 	
P070	A070.1
Building entrances:	The main entrance to the building is clearly visible from and addresses the primary street frontage.
a. are readily identifiable from the road frontage;	
b. add visual interest to the streetscape;	A070.2
c. are designed to limit opportunities for concealment;	Where the building does not adjoin the street frontage, a dedicated and sealed pedestrian footpath is provided
d. are located and oriented to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites.	between the street frontage and the building entrance.

Performance outcomes	Acceptable outcomes
Note - The design provisions for footpaths outlined in Planning scheme policy - Integrated design may assist in demonstrating compliance with this outcome.	
Major electricity infrastructure ⁽⁴³⁾ , Substation ⁽⁸⁰⁾ and	Utility installation ⁽⁸⁶⁾
P071	A071.1
 The development does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; c. not visually dominant or intrusive; d. located behind the main building line; e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures; f. camouflaged through the use of colours and materials which blend into the landscape; g. treated to eliminate glare and reflectivity; h. landscaped; i. otherwise consistent with the amenity and character of the zone and surrounding area. PO72 Infrastructure does not have an impact on pedestrian health and safety.	 Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment: a. are enclosed within buildings or structures; b. are located behind the main building line; c. have a similar height, bulk and scale to the surrounding fabric; d. have horizontal and vertical articulation applied to all exterior walls. A071.2 A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries. AC72 Access control arrangements: a. do not create dead-ends or dark alleyways adjacent to the infrastructure; b. minimise the number and width of crossovers and
	entry points;c. provide safe vehicular access to the site;d. do not utilise barbed wire or razor wire.
 PO73 All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility: a. generates no audible sound at the site boundaries where in a residential setting; or b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. 	A073 All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.
Telecommunications facility ⁽⁸¹⁾ Editor's note - In accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾ must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.	

Performance outcomes	Acceptable outcomes
Telecommunications facilities ⁽⁸¹⁾ are co-located with existing telecommunications facilities ⁽⁸¹⁾ , Utility installation ⁽⁸⁶⁾ , Major electricity infrastructure ⁽⁴³⁾ or Substation ⁽⁸⁰⁾ if there is already a facility in the same coverage area.	New telecommunication facilities ⁽⁸¹⁾ are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.
	A074.2
	If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.
P075	A075
A new Telecommunications facility ⁽⁸¹⁾ is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future.	A minimum of 45m ² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility.
P076	A076
Telecommunications facilities ⁽⁸¹⁾ do not conflict with lawful existing land uses both on and adjoining the site.	The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.
P077	A077.1
 The Telecommunications facility⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; 	Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.
c. not visually dominant or intrusive;d. located behind the main building line;	A077.2
e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures;	In all other areas towers do not exceed 35m in height.
f. camouflaged through the use of colours and	A077.3
materials which blend into the landscape;g. treated to eliminate glare and reflectivity;h. landscaped;	Towers, equipment shelters and associated structures are of a design, colour and material to:
i. otherwise consistent with the amenity and character of the zone and surrounding area.	a. reduce recognition in the landscape;b. reduce glare and reflectivity.
	A077.4
	All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.
	Where there is no established building line the facility is located at the rear of the site.

Performance outcomes	Acceptable outcomes
	A077.5
	The facility is enclosed by security fencing or by other means to ensure public access is prohibited.
	A077.6
	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.
	Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.
P078	A078
Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.	An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.
PO79	A079
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.	All equipment comprising the Telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.
Values and con	straints criteria
Note - The relevant values and constraints criteria do not apply where Reconfiguring a lot or Material change of use or Operational work, wh development footprint plan (or similar in the case of Landslide hazard) planning scheme.	ere that approval has considered and addressed (e.g. through a
Acid sulfate soils - (refer Overlay map - Acid sulfate s apply)	
Note - Planning scheme policy - Acid sulfate soils provides guidance f sulfate soils i.e. development involving filling or excavation works belo	
PO80	AO80
Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development:	Development does not involve:

ation or otherwise removing of more than of soil or sediment where below than 5m
lian Height datum AHD; or of land of more than 500m ³ of material with arage depth of 0.5m or greater where below a Australian Height datum AHD.

criteria apply)

Note - The following are exempt from the native clearing provisions of this planning scheme:

- a. Clearing of native vegetation located within an approved development footprint;
- b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;
- c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;
- d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;
- e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;
- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.

Note - Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

Vegetation clearing, ecological value and connectivity		
PO81	No acceptable outcome provided.	
Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:		

Performance outcomes	Acceptable outcomes	
 a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded; b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*. * Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014. PO82 Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by: a. retaining habitat trees; b. providing contiguous patches of habitat; c. provide replacement and rehabilitation planting to improve connectivity; d. avoiding the creation of fragmented and isolated patches of habitat; e. providing wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. 	No acceptable outcome provided.	
Vegetation clearing and habitat protection		
PO83 Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	No acceptable outcome provided.	
PO84 Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will:	No acceptable outcome provided.	

Perf	ormance outcomes	Acceptable outcomes
a. b. c.	rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework.	
PO8	5	No acceptable outcome provided.
	elopment ensures safe, unimpeded, convenient and bing wildlife movement and habitat connectivity by: providing contiguous patches of habitat; avoiding the creation of fragmented and isolated patches of habitat; providing wildlife movement infrastructure; providing replacement and rehabilitation planting to improve connectivity.	of store ion
Veg	etation clearing and soil resource stability	
PO8	6	No acceptable outcome provided.
Dev	elopment does not:	
a. b.	result in soil erosion or land degradation; leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.	5
Veg	etation clearing and water quality	2
grou	 Provide the second state of the secon	No acceptable outcome provided.
PO8	8	No acceptable outcome provided.
	elopment minimises adverse impacts of stormwater off on water quality by:	
a. b. c.	minimising flow velocity to reduce erosion; minimising hard surface areas; maximising the use of permeable surfaces;	

Performance outcomes	Acceptable outcomes	
d. incorporating sediment retention devices;e. minimising channelled flow.		
Vegetation clearing and access, edge effects and ur	ban heat island effects	
P089 Development retains safe and convenient public access	No acceptable outcomes provided.	
in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.		
PO90	No acceptable outcomes provided.	
Development minimises potential adverse 'edge effects' on ecological values by:	S	
a. providing dense planting buffers of native vegetation between a development and environmental areas;b. retaining patches of native vegetation of greatest	V 10.	
possible size where located between a development and environmental areas ;	C C	
c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;d. ensuring that buildings and access (public and		
vehicle) are setback as far as possible from environmental areas and corridors;		
 e. landscaping with native plants of local origin. Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed 		
invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.		
P091	No acceptable outcomes provided.	
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:		
a. pervious surfaces;b. providing deeply planted vegetation buffers and		
 green linkage opportunities; c. landscaping with local native plant species to achieve well-shaded urban places; 		
 d. increasing the service extent of the urban forest canopy. 		
Vegetation clearing and Matters of Local Environmental Significance (MLES) environmental offsets		
PO92	No acceptable outcome provided.	
Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland		

Performance outcomes	Acceptable outcomes
buffer, an environmental offset is required in accordance with the environmental offset requirements identified in Planning scheme policy - Environmental areas.	
Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.	
Extractive resources separation area (refer Overlay main if the following assessment criteria apply)	p - Extractive resources (separation area) to determine
Note - To demonstrate achievement of the performance outcomes, a person. Guidance to preparing noise impact assessment report is pro	
PO93	A093
Development does not increase the number of people living in the Extractive Resources separation area.	One dwelling house ⁽²²⁾ permitted per lot within separation area.
PO94	A094
 Development: a. does not introduce or increase uses that are sensitive to the impacts of an Extractive industry⁽²⁷⁾; b. is compatible with the operation of an Extractive industry⁽²⁷⁾; c. does not comprise or undermine the function and integrity of the separation area in providing a buffer between key extractive and processing activities and sensitive, incompatible uses outside the separation area. 	Development within the separation area does not include the following activities: a. Caretaker's accommodation ⁽¹⁰⁾ ; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ; d. Dwelling unit ⁽²³⁾ ; e. Hospital ⁽³⁶⁾ ; f. Rooming accommodation ⁽⁶⁹⁾ ; g. Multiple dwelling ⁽⁴⁹⁾ ; h. Non-resident workforce accommodation ⁽⁵²⁾ ; i. Relocatable home park ⁽⁶²⁾ ; j. Residential care facility ⁽⁶⁵⁾ ; k. Resort complex ⁽⁶⁶⁾ ; l. Retirement facility ⁽⁶⁷⁾ ; m. Rural workers' accommodation ⁽⁷¹⁾ ; n. Short-term accommodation ⁽⁷⁷⁾ ; o. Tourist park ⁽⁸⁴⁾ .
PO95 Habitable rooms achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment.	 AO95 All habitable rooms within the separation area are: a. acoustically insulated to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008; b. provided with mechanical ventilation.
PO96	AO96
Development provides open space areas for passive recreation in a manner where impacts from key extractive/processing activities, particularly noise, is minimised.	Private open space areas are separated from the resource processing area by buildings or a 1.8m high solid structure.

Performance outcomes	Acceptable outcomes	
Extractive resources transport routes (refer Overlay map - Extractive resources (transport route and buffer to determine if the following assessment criteria apply)		
PO97	AO97	
 Development: a. does not increase in the number of people living in close proximity to a transport route and being subject to the adverse effects from the transportation route; b. does not result in the establishment of uses that are incompatible with the operation of Extractive resources transport routes; c. adopts design and location measures to satisfactorily mitigate the potential adverse impacts associated with transportation routes on sensitive land uses. Such measures include, but are not limited to: i. locating the furthest distance possible from the transportation route; ii. habitable rooms being located the furthest from the transportation route; PO98 	The following uses are not located within the 100m wide transport route buffer: a. Caretaker's accommodation ⁽¹⁰⁾ , except where located in the Extractive industry zone; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ; d. Dwelling house ⁽²²⁾ ; e. Dwelling unit ⁽²³⁾ ; f. Hospital ⁽³⁶⁾ ; g. Rooming accommodation ⁽⁶⁹⁾ ; h. Multiple dwelling ⁽⁴⁹⁾ ; i. Non-resident workforce accommodation ⁽⁵²⁾ ; j. Relocatable home park ⁽⁶²⁾ ; k. Residential care facility ⁽⁶⁵⁾ ; l. Resort complex ⁽⁶⁶⁾ ; m. Retirement facility ⁽⁶⁷⁾ ; n. Rural workers' accommodation ⁽⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷⁾ ; p. Tourist park ⁽⁸⁴⁾ .	
Development: a. does not adversely impact upon the efficient and	Development does not create a new vehicle access point onto an Extractive resources transport route.	
 effective transportation of extractive material along a transportation route; b. ensures vehicle access and egress along transportation routes are designed and located to achieve a high degree of safety, having good visibility; c. utilises existing vehicle access points and where existing vehicle access points are sub-standard or poorly formed, they are upgraded to an appropriate standard. 	AO98.2 A vehicle access point is located, designed and constructed in accordance with Planning scheme policy - Integrated design.	
Heritage and landscape character (refer Overlay map - Heritage and landscape character to determine if the following assessment criteria apply) Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.		
PO99 Development will:	AO99 Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.	

Perf	ormance outcomes	Acceptable outcomes
a. b. c. d. e. f.	not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building; protect the fabric and setting of the heritage site, object or building; be consistent with the form, scale and style of the heritage site, object or building; utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes; incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building; retain public access where this is currently provided.	Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.
PO1	00	No acceptable outcome provided.
	nolition and removal is only considered where:	
a. b. c. d.	a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or limited demolition is performed in the course of repairs, maintenance or restoration; or demolition is performed following a catastrophic event which substantially destroys the building or object.	scheme
PO1	01	No acceptable outcome provided.

and occu mea Prot ensu Sigr pool safe repool a tree	elopment does not adversely impact upon the health vitality of significant trees. Where development urs in proximity to a significant tree, construction usures and techniques as detailed in AS 4970-2009 ection of trees on development sites are adopted to ure a significant tree's health, wellbeing and vitality. ificant trees are only removed where they are in a r state of health or where they pose a health and ty risk to persons or property. A Tree Assessment ort prepared by a suitably qualified arborist confirming ee's state of health is required to demonstrate evement of this performance outcome.	 Development does: a. not result in the removal of a significant tree; b. not occur within 20m of a protected tree; c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees.

Performance outcomes	Acceptable outcomes	
Infrastructure buffers (refer Overlay map - Infrastructure buffers to determine if the following assessment criteria apply)		
PO103	AO103	
Odour sensitive development is separated from Wastewater treatment plants so they are not adversely affected by odour emission or other air pollutant impacts. P0104 Habitable rooms within an Electricity supply substation buffer are located a sufficient distance from substations ⁽⁸⁰⁾ to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields. Note - Habitable room is defined in the Building Code of Australia (Volume 1) P0105 Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation ⁽⁸⁰⁾ to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment. Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy – Noise. Note - Habitable room is defined in the Building Code of Australia (Volume 1)	The following uses are not located within a wastewater treatment site buffer: a. Caretaker's accommodation ⁽¹⁰⁾ ; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ , d. Dwelling house ⁽²²⁾ , e. Dwelling unit ⁽²³⁾ ; f. Hospital ⁽³⁶⁾ ; g. Rooming accommodation ⁽⁶⁹⁾ ; h. Multiple dwelling ⁽⁴⁹⁾ ; i. Non-resident workforce accommodation ⁽⁵²⁾ ; j. Relocatable home park ⁽⁶²⁾ ; k. Residential care facility ⁽⁶⁵⁾ ; l. Resort complex ⁽⁶⁶⁾ ; m. Retirement facility ⁽⁶⁷⁾ ; n. Rural workfers' accommodation ⁽⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷⁾ ; p. Tourist park ⁽⁶⁴⁾ . AO104 Habitable rooms: a. are not located within an Electricity supply substation buffer; and b. proposed on a site subject to an Electricity supply substation f ⁽⁶⁰⁾ are acoustically insulted to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008. Note - Habitable room is defined in the Building Code of Australia (Volume 1) No acceptable outcome provided.	

Performance outcomes	Acceptable outcomes	
PO106	AO106	
Development within a High voltage electricity line buffer provides adequate buffers to high voltage electricity lines to protect amenity and health by ensuring development:	Development does not involve the construction of any buildings or structures within a High voltage electricity line buffer.	
 a. is located and designed to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields in accordance with the principle of prudent avoidance; b. is located and designed in a manner that maintains a high level of security of supply; c. is located and design so not to impede upon the functioning and maintenance of high voltage electrical infrastructure. 	ion ²	
PO107	A0107	
Development within a Pumping station buffer is located, designed and constructed to:	Development does not involve the construction of any buildings or structures within a Pumping station buffer.	
a. ensure that odour or other air pollutant impacts on the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008;	ene	
 ensure that noise impacts on the amenity of the development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008. 	Sch	
Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply) Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.		
PO108	AO108	
Development:	No acceptable outcome provided.	
 a. minimises the risk to persons from overland flow; b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. 		
PO109	AO109	
Development:	No acceptable outcome provided.	
a. maintains the conveyance of overland flow predominantly unimpeded through the premises for		

Perf	ormance outcomes	Acceptable outcomes
b.	any event up to and including the 1% AEP for the fully developed upstream catchment; does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.	
Eng does	a - A report from a suitably qualified Registered Professional ineer Queensland is required certifying that the development s not increase the potential for significant adverse impacts on pstream, downstream or surrounding premises.	
	 Reporting to be prepared in accordance with Planning scheme – Flood hazard, Coastal hazard and Overland flow. 	
P01	10	No acceptable outcome provided.
	elopment does not:	
а.	directly, indirectly or cumulatively cause any increase in overland flow velocity or level;	
b.	increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure.	
acce	e - Open concrete drains greater than 1m in width are not an eptable outcome, nor are any other design options that may ease scouring.	Scho

the e	elopment ensures that public safety and the risk to environment are not adversely affected by a mental impact of overland flow on a hazardous	Development ensures that a hazardous chemical is not located or stored in an Overland flow path area.
cher	nical located or stored on the premises.	Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.
PO1	12	A0112
over	elopment which is not in a Rural zone ensures that land flow is not conveyed from a road or public open se onto a private lot.	Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.
P01	13	AO113.1
infra throu fully	elopment ensures that inter-allotment drainage structure, overland flow paths and open drains ugh private property cater for overland flows for a developed upstream catchment and are able to be ly maintained.	Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM: a. Urban area – Level III; b. Rural area – N/A;

Performance outcomes	Acceptable outcomes	
Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on	c. Industrial area – Level V;d. Commercial area – Level V.	
an upstream, downstream or surrounding premises.	AO113.2	
Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow	Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.	
PO114	No acceptable outcome provided.	
Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over:	ion sion	
a. a stormwater pipe if the nominal pipe diameter exceeds 300mm;	C C	
b. an overland flow path where it crosses more than one premises;		
c. inter-allotment drainage infrastructure.		
Note - Refer to Planning scheme policy - Integrated design for details and examples.	che	
Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.		
Additional criteria for development for a Park ⁽⁵⁷⁾	V	
PO115	PO115	
Development for a Park ⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:	Development for a Park ⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.	
a. public benefit and enjoyment is maximised;		
b. impacts on the asset life and integrity of park structures is minimised;		
c. maintenance and replacement costs are minimised.		
Riparian and wetland setbacks		
PO116	AO116	
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and	Development does not occur within:	
environmental values. This is achieved by recognising and responding to the following matters:	a. 50m from top of bank for W1 waterway and drainage line	
a. impact on fauna habitats;	 b. 30m from top of bank for W2 waterway and drainage line 	

Performance outcomes		Acceptable outcomes
b.	impact on wildlife corridors and connectivity;	c. 20m from top of bank for W3 waterway and drainage line
c.	impact on stream integrity;	
		d. 100m from the edge of a Ramsar wetland, 50m
d.	impact of opportunities for revegetation and rehabilitation planting;	from all other wetlands.
e.	edge effects.	Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.

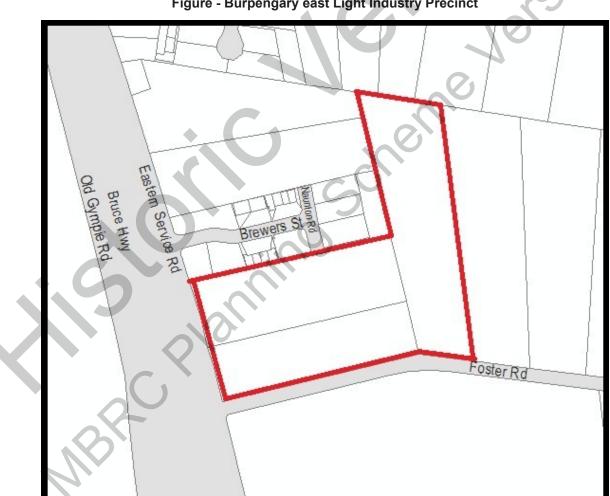

Figure - Burpengary east Light Industry Precinct

6.2.7.3 General industry precinct

6.2.7.3.1 Purpose - General industry precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the General industry precinct:
 - a. A range of industrial uses and supporting activities are established which are of a scale or intensity where the possibility of adverse impacts on sensitive receptors requires a location sufficiently buffered from incompatible activities.
 - b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.
 - c. Development is located, designed and managed to:
 - i. maintain the health and safety of people;
 - ii. avoid significant adverse effects on the natural environment;
 - iii. minimise the possibility of adverse impacts on surrounding non-industrial uses.
 - d. Development has access to infrastructure and essential services and convenient access to major transport routes.
 - e. Development is designed to incorporate sustainable practices where possible, including water sensitive design and energy efficient building design.
 - f. The scale, character and built form of development and the resulting streetscape contribute to a high standard of visual and physical amenity and incorporates crime prevention through environmental design (CPTED) principles.
 - g. Non-industrial uses occurring in the precinct:
 - i. Do not compromise or constrain the operation or viability of existing or future industrial activities;
 - ii. Are subordinate in function and scale to all centres with in the region;
 - iii. Do not undermine the viability of existing or future centres or neighbourhood hubs;
 - iv. Are consolidated to minimize adverse impacts on the efficient functioning of industrial activities;
 - v. Provide a convenience service or support roll to industries and employees within the precinct only.

Note - An Economic Impact Assessment may be required to demonstrate compliance with part of the outcome/s above. Refer to Planning scheme policy - Economic impact assessment for information required.

h. Low impact industry⁽⁴²⁾, Service industry⁽⁷³⁾ and Warehouse⁽⁸⁸⁾ activities:

provide a supporting function to industries in the precinct, or are of a scale and intensity where the off-site impacts of the activity are similar to that of Medium impact industry⁽⁴⁷⁾;

- ii. are not detrimentally affected by the operations of existing or future industrial activities in the precinct;
- iii. do not compromise the operations of existing or future industrial activities in the precinct.
- i. High impact industry⁽³⁴⁾ activities only establish in the precinct where:

- i. there is a minimum separation distance of 500m from an existing or approved sensitive land use or sensitive zone;
- ii. it can be demonstrated that the use will operate without adverse impacts on the surrounding area.
- j. Special industry⁽⁷⁹⁾ does not establish within the precinct.
- k. Stand alone Offices do not establish within the precinct;
- I. Sensitive land uses, including all forms of residential development, do not occur within the precinct.
- m. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
- n. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, dust, electromagnetic interference, odour, particles or smoke.
- o. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
- p. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
 - Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;

- vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
- vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
- viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
- ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
- x. ensuring effective and efficient disaster management response and recovery capabilities;
- xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- r. Development in the General industry precinct includes one or more of the following:

 Animal husbandry⁽⁴⁾ Bulk landscape supplies⁽⁹⁾ Caretaker's accommodation⁽¹⁰⁾ Food and drink outlet⁽²⁸⁾ (where does not exceed 100m²GFA) Medium impact industry⁽⁴⁷⁾ Warehouse⁽⁸⁸⁾ 	•	Agricultural supplies store ⁽²⁾	•	Emergency services ⁽²⁵⁾	•	Research and technology industry ⁽⁶⁴⁾
 Bulk landscape supplies⁽⁹⁾ Caretaker's Medium impact industry⁽⁴⁷⁾ Warehouse⁽⁸⁸⁾ 	•	Animal husbandry ⁽⁴⁾	•			
Caretaker's Medium impact industry ⁽⁴⁷⁾	•	Bulk landscape supplies ⁽⁹⁾			•	
accommodation ⁽¹⁰⁾	•		•	Medium impact industry ⁽⁴⁷⁾	•	Warehouse ⁽⁸⁸⁾
		accommodation ⁽¹⁰⁾				

s. Development in the General industry precinct does not include any of the following:

	Air services ⁽³⁾	•	Garden centre ⁽³¹⁾	•	Permanent plantation ⁽⁵⁹⁾
	Animal keeping ⁽⁵⁾	•	Hardware and trade	•	Place of worship ⁽⁶⁰⁾
•	Bar ⁽⁷⁾		supplies ⁽³²⁾	•	Relocatable home park ⁽⁶²⁾
•	Brothel ⁽⁸⁾	•	Hospital ⁽³⁶⁾	•	Residential care facility ⁽⁶⁵⁾
•	Cemetery ⁽¹²⁾	•	Hotel ⁽³⁷⁾	•	Resort complex ⁽⁶⁶⁾
	Community care centre ⁽¹⁵⁾	•	Indoor sport and recreation ⁽³⁸⁾	•	Retirement facility ⁽⁶⁷⁾
•	Community residence ⁽¹⁶⁾	•	Intensive animal industry ⁽³⁹⁾	•	Roadside stall ⁽⁶⁸⁾
•	Community use ⁽¹⁷⁾	•	Intensive horticulture ⁽⁴⁰⁾	•	Rooming accommodation ⁽⁶⁹⁾

	(where exceeding 100m ² GFA)	•	Outdoor sport and recreation ⁽⁵⁵⁾	•	Wholesale nursery ⁽⁸⁹⁾
	,			•	Winery ⁽⁹⁰⁾
•	Function facility ⁽²⁹⁾	•	Parking station ⁽⁵⁸⁾		
•	Funeral parlour ⁽³⁰⁾				

t. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

9.3.1.2 Criteria for assessment

Part D—Criteria for assessable development - General industry precinct

Table 6.2.7.3.1 Assessable d	evelopment	- General	industry precinct

provided.

The height of buildings is in keeping with the predominant industrial character of the precinct and does not cause adverse amenity impacts on surrounding sensitive land uses and zones.		Building height does not exceed the maximum height identified on Overlay map - Building heights.				
Set	backs					
PO	3	A03				
Stre	eet boundary setbacks:	Buildings maintain a minimum setback of :				
a.	minimise building bulk and visual dominance from the street;	a. 6m to the street frontage (other than the Bruce Highway);				
b.	provide areas for landscaping at the front of the site;	 b. 3m to the secondary street frontage; 10m to a begin derived in initial the Driver Uisburger 				
C.	allow for customer parking to be located at the front of the building;	c. 10m to a boundary adjoining the Bruce Highway.				
d.	Provide opportunities for dense landscaping to screen at maturity any visibility of development of a site from the Bruce Highway.					
priv	e and rear boundary setbacks maintain views, racy, access to natural light and the visual amenity adjoining sensitive land uses.	AO4 Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m. Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.				
Bui PO	Iding appearance and design	No acceptable outcome provided.				
Whe arte zon des and	ere fronting an district collector, sub-arterial or erial road, or visible from a Park ⁽⁵⁷⁾ , or a Centre ed lot, buildings provide a high level of architectural ign which adds visual interest to the streetscape I reduces the perceived bulk of the building, by orporating:					
a.	a range of building materials, colours and features;					
b.	facade articulation along street frontages;					
C.	design features to promote customer entry points;					
d.	materials that are not highly reflective.					
	te - The road hierarchy is mapped on Overlay map - Road rarchy					

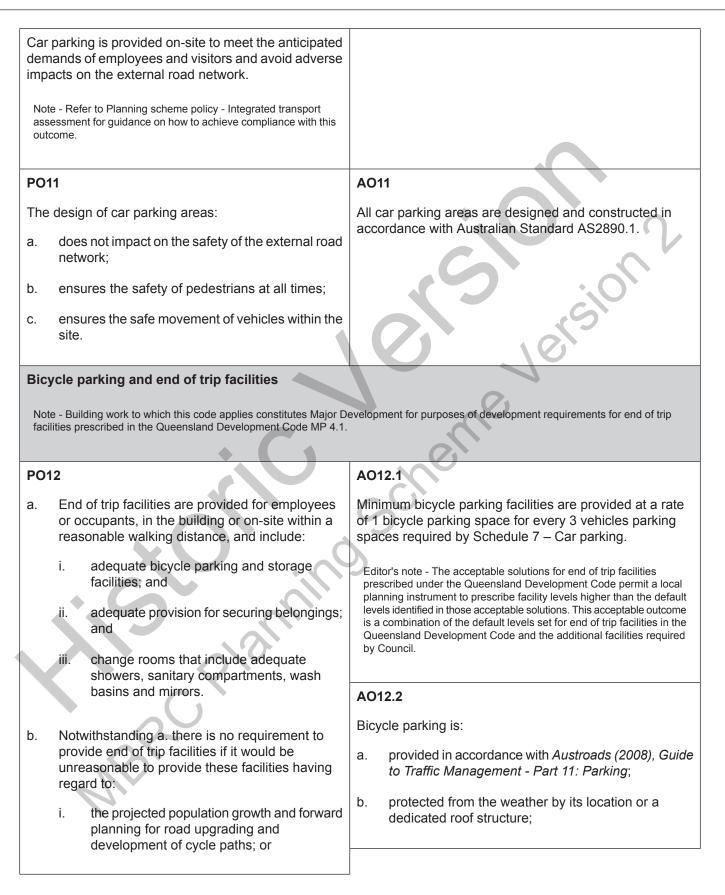

dominate the streetscape or create safety issues. Note - The following example illustrates an acceptable design response to this outcome.	sections between columns or posts have a minimum transparency of 70% spread evenly across its total surface area.
Public access	
PO9	A09.1
The use has a safe, clearly identifiable public access separated from service and parking areas. Note - The following diagram illustrates an acceptable design response to this outcome.	Pedestrian linkages are provided from the street and customer car parking areas directly to the main entrance of the building. AO9.2 The public access is separated from industrial service areas.
Car parking	4040
PO10	AO10
	Car parking is provided in accordance with Schedule 7 - Car parking.

AO8

Where fencing is provided on the street frontage, fence

PO8

The provision of fencing on street frontages does not

 ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters. 	 c. located within the building or in a dedicated, secure structure for residents and staff; d. adjacent to building entrances or in public areas for customers and visitors. Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3. Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be precided they are within
Editor's note - I he intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc. Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the acceptable outcomes under this heading meet the current performance requirement prescribed in the Queensland Development Code.	 and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels get for end of trip facilities in the Queensland Development Code and the additional facilities required by Council. AO12.3 For non-residential uses, storage lockers: a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number); b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth). Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

Loading and servicing							
P013	No acce	ptable	outcome	e provideo	d.		
Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads. Note - If landscaping is proposed for screening purposes, refer to Planning scheme policy - Integrated design for determining acceptable levels.							

Waste	
PO14 Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste.	No acceptable outcome provided.
Environmental impacts	
PO15 Where a use is not an environmentally relevant activity under the Environmental Protection Act, the release of any containment that may cause environmental harm is mitigated to an acceptable level.	AO15 Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.
Lighting	
PO16 Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.	AO16 Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting. Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day
Noise	2
PO17 Noise generating uses do not adversely affect existing or potential noise sensitive uses. Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line. Note - A noise impact assessment may be required to demonstrate compliance with this outcome. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.	No acceptable outcome provided.
P018	AO18.1
Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while: a. contributing to safe and usable public spaces, through maintaining high levels of surveillance of	Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.
parks, streets and roads that serve active	Noise attenuation structures (e.g. walls, barriers or fences)

 transport purposes (e.g. existing or future pedestrian paths or cycle lanes etc); b. maintaining the amenity of the streetscape. Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise. Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures. 	 a. are not visible from an adjoining road or public area unless: adjoining a motorway or rail line; or adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible. b. do not remove existing or prevent future active transport routes or connections to the street network; c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.
	Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.
	Note - Refer to Overlay map – Active transport for future active transport routes.
Hazardous Chemicals	
Note - To assist in demonstrating compliance with the following per be prepared and submitted by a suitably qualified person in accord <i>involving hazardous chemicals</i> '.	formance outcomes, a Hazard Assessment Report may be required to ance with 'State Planning Policy Guideline - Guidance on development
Terms used in this section are defined in State 'State Planning Polic	y Guideline - Guidance on development involving hazardous chemicals'.
	5
P019	AO19.1
Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use	Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:
zones.	Dangerous Dose
	a. For any hazard scenario involving the release of gases or vapours:
	i. AEGL2 (60minutes) or if not available ERPG2;
	ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.

- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO20.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.

AO19.2

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

- a. For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO20.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5×10 -6/year.

AO19.3

i I

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

Dangerous Dose

- a. For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 14kPa overpressure;
 - ii. 12.6kW/m2 heat radiation.

If criteria AO20.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50×10^{-6} /year.

PO20

hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.	Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.
PO21	AO21
Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.	Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.
PO22	A022.1
Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.	 The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively: a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and
•. ()	b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.
	AO22.2 The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.
Emissions into Brisbane operational airspace	
PO23	AO23.1
Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport's operational airspace.	Development does not emit a gaseous plume into the airport's operational airspace at a velocity exceeding 4.3m per second.
Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport's operational airspace.	A023.2
	Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.
Clearing of habitat trees where not located within t	he Environmental areas overlay map
PO24	No acceptable outcome provided
a. Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	

 b. Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed. c. Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner Note: Further guidance on habitat trees is provided in Planning scheme policy - Environmental areas 	
Work	s criteria
Utilities	
PO25	A025
The development is connected to an existing reticulated electricity supply system approved by the relevant energy regulating authority.	Development is connected to underground electricity.
PO26	No acceptable outcome provided
The development has access to telecommunications and broadband services in accordance with current standards.	
P027	AO27.1
The development provides for the treatment and disposal of sewage and other waste water in a way that will not cause environmental harm or pose a risk to	Where in a sewered area, the development is connected to a reticulated sewerage network.
public health.	AO27.2
R	Trade waste is pre-treated on-site prior to discharging into the sewerage network.
PO28	AO28
The development is provided with an adequate and sustainable supply of potable (drinking and general use e.g. gardening, washing, fire fighting) water.	Where in an existing connections area or a future connections area as detailed in the Unitywater Connections Policy, the development is connected to the reticulated water supply system in accordance with the South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.
PO29	No acceptable outcome provided

The development is provided with constructed and dedicated road access.	
Access	
PO30	No acceptable outcome provided
Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.	
PO31	A031.1
The layout of the development does not compromise:a. the development of the road network in the area;b. the function or safety of the road network;c. the capacity of the road network.	The development provides for the extension of the road network in the area in accordance with Council's road network planning.
Note - The road hierarchy is mapped on Overlay map - Road hierarchy.	The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning. AO31.3 The lot layout allows forward access to and from the site.
PO32	A032.1
Safe access is provided for all vehicles required to access the site.	 Site access and driveways are designed and located in accordance with: a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
NBT	AO32.2 Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design. Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction.
	AO32.3

	Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements.
PO33	No acceptable outcome provided
Upgrade works (whether trunk or non-trunk) are provided where necessary to:	
 a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network; b. ensure the orderly and efficient continuation of the active transport network; 	
c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design.	C ersi
Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment.	ne
Note - The road network is mapped on Overlay map - Road hierarchy.	cone
Note - The primary and secondary active transport network is mapped on Overlay map - Active transport.	
Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows:	
 Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or Where the street is not established to an urban standard. 	
prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve.	
Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards.	
Stormwater	
PO34	No acceptable outcome provided
Stormwater run-off from the site is conveyed to a point of lawful discharge without causing nuisance or annoyance to any person, property or premises.	
Note - Refer to Planning scheme policy - Integrated design for details.	

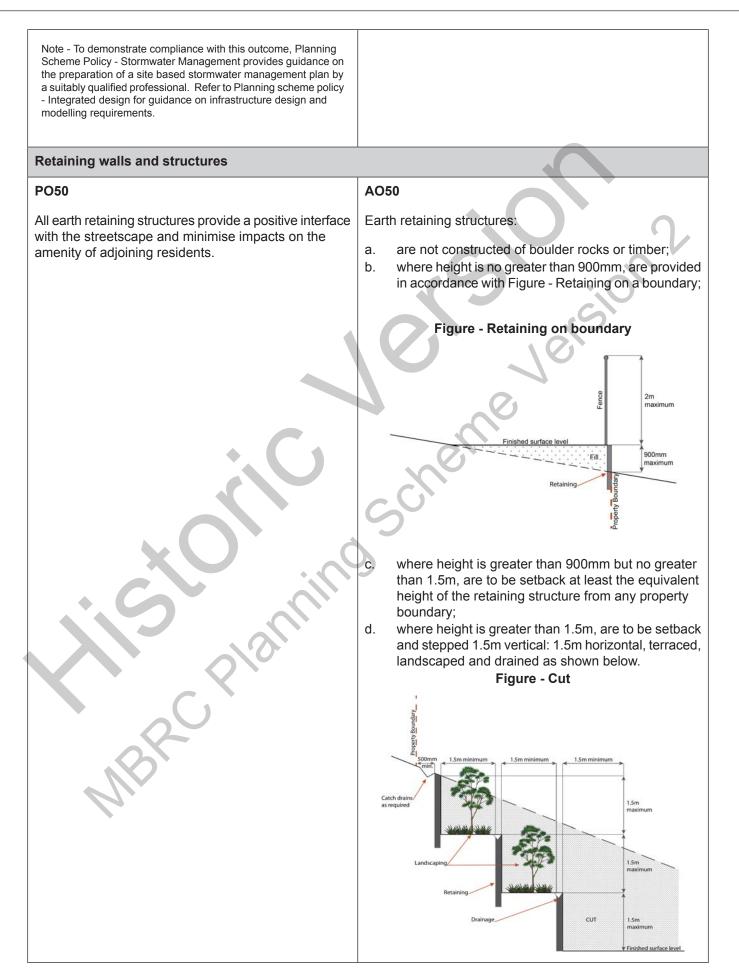

Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome. Note - A watercourse as defined in the Water Act may be accepted as a lawful point of discharge providing the drainage discharge from the site does not increase the downstream flood levels during events up to and including the 1% AEP storm. An afflux of +20mm may be accepted on Council controlled land and road infrastructure. No worsening is ensured when stormwater is
discharged into a catchment that includes State Transport Infrastructure.
PO35 No acceptable outcome provided
Stormwater generated from the development does not compromise the capacity of existing stormwater infrastructure downstream of the site. Note - A downstream drainage discharge report in accordance with Planning scheme policy - Stormwater management may be required to demonstrate achievement of this performance outcome.
PO36 No acceptable outcome provided
Stormwater quality management systems are designed and constructed to minimise the environmental impact of stormwater discharge on surface and underground receiving water quality and meet the design objectives in Tables A and B in Appendix 3 of the SPP. Note - A stormwater management plan prepared by a suitably qualified professional will be required in accordance with Planning scheme policy - Stormwater management.
PO37 No acceptable outcome provided
Easements for drainage purposes are provided over:
 a. stormwater pipes located in freehold land if the pipe diameter exceeds 300mm; b. overland flow paths where they cross more than one property boundary. Note - Refer to Planning scheme policy - Integrated design for details. Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.
Site works and construction management
PO38 No acceptable outcome provided
The site and any existing structures are maintained in a tidy and safe condition.

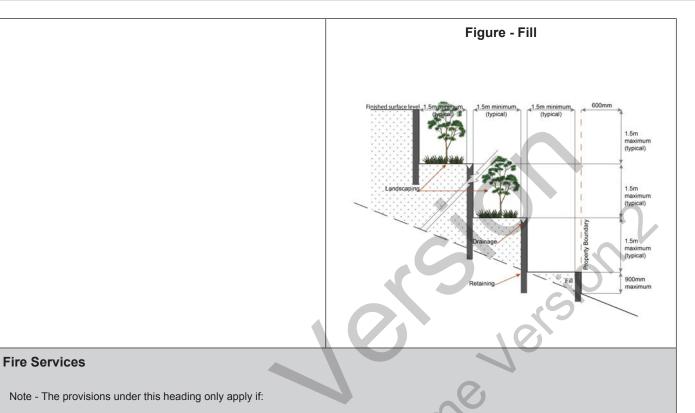

PO39 AO39.1 All works on-site are managed to: Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in minimise as far as practicable, impacts on a. accordance with the Urban Stormwater Quality Planning adjoining or adjacent premises and the Guidelines, Planning scheme policy - Stormwater streetscape in regard to erosion and management and Planning scheme policy - Integrated sedimentation, dust, noise, safety and light; design, including but not limited to the following: b. minimise as far as possible, impacts on the stormwater is not discharged to adjacent properties natural environment: а. in a manner that differs significantly from pre-existing ensure stormwater discharge is managed in a C. conditions; manner that does not cause nuisance or stormwater discharged to adjoining and downstream b. annoyance to any person or premises; properties does not cause scour and erosion; d. avoid adverse impacts on street trees and their critical root zone. C. stormwater discharge rates do not exceed pre-existing conditions; the 10% AEP storm event is the minimum design d. storm for all temporary diversion drains; and the 50% AEP storm event is the minimum design e. storm for all silt barriers and sedimentation basins. AO39.2 Stormwater runoff, erosion and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness. Note - The measures are adjusted on-site to maximise their effectiveness. AO39.3 The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property. AO39.4 Where works are proposed in proximity to an existing street tree, an inspection and a root management plan is undertaken by a qualified arborist which demonstrates and ensures that no permanent damage is caused to the tree. **PO40** AO40 Dust suppression measures are implemented during No dust emissions extend beyond the boundaries of the soil disturbances and construction works to protect site during soil disturbances and construction works. nearby premises from unreasonable dust impacts. **PO41** AO41.1

All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape.	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe.
greater than 50m ³ , a haulage route must be identified and approved by Council.	AO41.2
	All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).
	AO41.3
	Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
PO42	AO42
All disturbed areas are rehabilitated at the completion of construction.	At completion of construction all disturbed areas of the site are to be:
Note - Refer to Planning scheme policy - Integrated design for details.	a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;b. grassed.
is anni	Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.
PO43	AO43.1
The clearing of vegetation on-site: a. is limited to the area of infrastructure works,	All native vegetation to be retained on-site is temporarily fenced or protected prior to and during development works.
 a. Is infined to the area of infrastructure works, building areas and other necessary areas for the works; and b. includes the removal of declared weeds and other 	Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.
materials which are detrimental to the intended	
use of the land; c. is disposed of in a manner which minimises nuisance and annoyance to existing premises.	AO43.2
	Disposal of materials is managed in one or more of the following ways:
Note - No burning of cleared vegetation is permitted.	a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or
	b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site.

	Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.
PO44 Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council. Earthworks	No acceptable outcome provided
 PO45 On-site earthworks are designed to consider the visual and amenity impact as they relate to: a. the natural topographical features of the site; b. short and long-term slope stability; c. soft or compressible foundation soils; d. reactive soils; e. low density or potentially collapsing soils; f. existing fill and soil contamination that may exist on-site; g. the stability and maintenance of steep rock slopes and batters; h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential). Note - Filling or excavation works are to be completed within six months of the commencement date. 	AO45.1 All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary. AO45.2 Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters. AO45.3 Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ. AO45.4 All filling or excavation is contained on-site. AO45.5 All fill placed on-site is:
	 a. limited to that required for the necessary approved use; b. clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill). AO45.6 The site is prepared and the fill placed on-site in accordance with AS3798. Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.

PO46	AO46
Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the surrounding area.	Any embankments more than 1.5 metres in height are stepped, terraced and landscaped. Figure - Embankment
	Figure - Embankment
	15m mm 15m 15m max 15m max 15m max
PO47	A047.1
Filling or excavation is undertaken in a manner that:	No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity.
 a. does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land; 	Note - Public sector entity as defined in the Sustainable Planning Act 2009.
 does not preclude reasonable access to a Council or public sector entity maintained infrastructure 	
or any drainage feature on, or adjacent to the land	A047.2
for monitoring, maintenance or replacement purposes.	Filling or excavation that would result in any of the following
	is not carried out on-site:
Note - Public sector entity as defined in the Sustainable Planning Act 2009.	 a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm; an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.
	Note - Public sector entity as defined in the Sustainable Planning Act 2009.
PO48	No acceptable outcome provided
Filling or excavation does not result in land instability.	
Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.	
PO49	No acceptable outcome provided.
Development does not result in	
a. adverse impacts on the hydrological and hydraulic capacity of the waterway or floodway;	
b. increased flood inundation outside the site;c. any reduction in the flood storage capacity in the floodway;	
d. and any clearing of native vegetation.	

- the development is for, or incorporates: a.
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or i.
 - material change of use for 2 or more sole occupancy units on the same lot, or within the same community titles scheme; or material change of use for a Tourist park⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for outdoor sales⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials. ii.
 - iii.
 - iv.

AND

b. none of the following exceptions apply:

- the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated water supply; or
- every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) - Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO51	AO51.1
 Development incorporates a fire fighting system that: a. satisfies the reasonable needs of the fire fighting entity for the area; b. is appropriate for the size, shape and topography of the development and its surrounds; c. is compatible with the operational equipment available to the fire fighting entity for the area; d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another; 	 External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations. Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable: a. in regard to the form of any fire hydrant - Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks⁽⁶⁴⁾ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;

 e. considers the fire hazard inherent in the surrounds to the development site; f. is maintained in effective operating order. Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region. 	 b. in regard to the general locational requirements for fire hydrants - Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005); c. in regard to the proximity of hydrants to buildings and other facilities - Part 3.2.2.2 (b), (c) and (d), with the exception that: i. for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings; ii. for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; iii. for outdoor sales⁽⁵⁴⁾, processing or storage facilities, hydrant coverage is required across the entire area of the outdoor sales⁽⁵⁴⁾, outdoor processing and outdoor storage facilities; d. in regard to fire hydrant accessibility and clearance requirements - Part 3.5 and, where applicable, Part 3.6.
	 AO51.2 A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land: a. an unobstructed width of no less than 3.5m; b. an unobstructed height of no less than 4.8m; c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance; d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.
	AO51.3 On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.
PO52 On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.	 AO52 For development that contains on-site fire hydrants external to buildings: a. those external hydrants can be seen from the vehicular entry point to the site; or b. a sign identifying the following is provided at the vehicular entry point to the site:
	 i. the overall layout of the development (to scale); ii. internal road names (where used); iii. all communal facilities (where provided); iv. the reception area and on-site manager's office (where provided);

	v. external hydrants and hydrant booster points;
	vi. physical constraints within the internal roadway system which would restrict access by fire fighting appliances to external hydrants and hydrant booster points.
	Note - The sign prescribed above, and the graphics used are to be:
	a. in a form;
	b. of a size;
	c. illuminated to a level;
	which allows the information on the sign to be readily understood, at
	all times, by a person in a fire fighting appliance up to 4.5m from the sign.
P053	A053
Each on-site fire hydrant that is external to a building	For development that contains on-site fire hydrants external
is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting	to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the
appliance traversing the development site.	manner prescribed in the technical note <i>Fire hydrant indication system</i> produced by the Queensland Department
	of Transport and Main Roads.
	Note - Technical note Fire hydrant indication system is available on
	the website of the Queensland Department of Transport and Main Roads.
Use spe	cific criteria
Industrial uses	F
P054	AO54
Ancillary office ⁽⁵³⁾ , administration functions and customer service components do not compromise the primary use of the site or industrial activities in the precinct.	The combined area of ancillary non-industrial activities, including but not limited to offices $^{(53)}$ and administration functions, does not exceed 20% of the GFA or 200m ² , whichever is the lesser.
P055	AO55
Ancillary retail or showroom ⁽⁷⁸⁾ areas do not	The combined area for the display and retail sale of
compromise the primary use of the site or industrial activities in the precinct and does not affect the viability,	commodities, articles or goods resulting from the industrial processes on the site does not exceed 5% of the GFA or
role or function of the region's centres network.	100m ² , whichever is the lesser.
PO56	No acceptable outcome provided.
Buildings directly adjoining non-industrial zoned land:	
a. are compatible with the character of the adjoining area;	

_			
	b.	minimise overlooking and overshadowing;	
	C.	maintain privacy;	
	d.	do not cause significant loss of amenity to neighbouring residents by way of noise, vibration, odour, lighting, traffic generation and hours of operation.	
	PO5	7	No acceptable outcome provided.
	Low	impact industry ⁽⁴²⁾ or Service industry ⁽⁷³⁾ activities:	
	a.	are only located on the periphery of the precinct;	
	b.	are only located on Collector, Sub-arterial or Arterial roads;	
	C.	do not constrain the function or viability of existing and future industrial uses in the precinct;	C e
	d.	do not generate excessive non-industrial traffic.	
		e - Refer to Overlay map - Road hierarchy for road sifications.	en e

Values an	d constraints criteria	
Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.		
	Ifate soils to determine if the following assessment criteria	
apply)		
Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m ³ and 500m ³ respectively.		
P076	A076	
Development avoids disturbing acid sulfate soils. Whe development disturbs acid sulfate soils, developme	ent:	
a. is managed to avoid or minimise the release or surface or groundwater flows containing acid a	and Height datum AHD; or	
 metal contaminants into the environment; protects the environmental and ecological valuand health of receiving waters; 	 b. filling of land of more than 500m³ of material with ar average depth of 0.5m or greater where below the 5m Australian Height datum AHD. 	
c. protects buildings and infrastructure from the effects of acid sulfate soils.		
Environmental areas (refer Overlay map - Enviro criteria apply)	onmental areas to determine if the following assessment	
Note - The following are exempt from the native clearing provis	sions of this planning scheme:	
a. Clearing of native vegetation located within an approved development footprint;		
b. Clearing of native vegetation within 10m from a lawfully established building reasonably necessary for emergency access or immediately required in response to an accident or emergency;		
c. Clearing of native vegetation reasonably necessary to remove or reduce the risk vegetation poses to serious personal injury or damage to infrastructure;		
d. Clearing of native vegetation reasonably necessary to construct and maintain a property boundary fence and not exceed 4m in width either side of the fence where in the Rural, Rural residential and Environmental Management and Conservation zones. In any other zone, clearing is not to exceed 2m in width either side of the fence;		
e Clearing of native vegetation reasonably necessary for	the purpose of maintenance or works within a registered easement for public	

e. Clearing of native vegetation reasonably necessary for the purpose of maintenance or works within a registered easement for public infrastructure or drainage purposes;

- f. Clearing of native vegetation in accordance with a bushfire management plan prepared by a suitably qualified person, submitted to and accepted by Council;
- g. Clearing of native vegetation associated with removal of recognised weed species, maintaining existing open pastures and cropping land, windbreaks, lawns or created gardens;
- h. Grazing of native pasture by stock;
- i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.
- Note Definition for native vegetation is located in Schedule 1 Definitions.

Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas.

Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable development) or by way of a planning scheme amendment. See Council's website for details.

Editors' Note - When clearing native vegetation within a MSES area, you may still require approval from the State government.

Vegetation clearing, ecological value and connectivity		
P077	No acceptable outcome provided.	
Development avoids locating in a High Value Area or a Value Offset Area. Where it is not practicable or reasonable for development to avoid establishing in these areas, development must ensure that:	Scho	
 a. the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area is maintained and not lost or degraded; b. on-site mitigation measures, mechanisms or processes are in place demonstrating the quality and integrity of the biodiversity and ecological values inherent to a High Value Area and a Value Offset Area are maintained. For example, this can be achieved through replacement, restoration or rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*. * Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014. 		
P078	No acceptable outcome provided.	
Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by:		
a. retaining habitat trees;		

 b. providing contiguous patches of habitat; c. provide replacement and rehabilitation planting to improve connectivity; d. avoiding the creation of fragmented and isolated patches of habitat; e. providing wildlife movement infrastructure. Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. 		
Vegetation clearing and habitat protection		
PO79	No acceptable outcome provided.	
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	C Jers	
PO80	No acceptable outcome provided.	
 Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will: a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework. 	schen	
PO81	No acceptable outcome provided.	
 Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by: a. providing contiguous patches of habitat; b. avoiding the creation of fragmented and isolated patches of habitat; c. providing wildlife movement infrastructure; d. providing replacement and rehabilitation planting to improve connectivity. 		
Vegetation clearing and soil resource stability		
PO82	No acceptable outcome provided.	
Development does not:		

	· · · · · · · · · · · · · · · · · · ·
 a. result in soil erosion or land degradation; b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner. 	
Vegetation clearing and water quality	
PO83	No acceptable outcome provided.
Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by:	
 a. ensuring an effective vegetated buffers and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads; b. avoiding or minimising changes to landforms to maintain hydrological water flows; c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities. 	
P084	No acceptable outcome provided.
Development minimises adverse impacts of stormwater run-off on water quality by:	ente
 a. minimising flow velocity to reduce erosion; b. minimising hard surface areas; c. maximising the use of permeable surfaces; d. incorporating sediment retention devices; e. minimising channelled flow. 	SCI
Vegetation clearing and access, edge effects and	urban heat island effects
PO85 Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.	
P086	No acceptable outcomes provided.
Development minimises potential adverse 'edge effects' on ecological values by:	
 a. providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas; 	
development and environmental areas ;c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;	

vehicle) are set environmental a	uildings and access (public and back as far as possible from areas and corridors; h native plants of local origin.	
detrimentally affecting th populations at the fringe invasion, pets, public and	cts are factors of development that go to e composition and density of natural of natural areas. Factors include weed d vehicle access, nutrient loads, noise used fire frequency and changes in the e water flow.

	 m. Retirement facility⁽⁶⁷⁾; n. Rural workers' accommodation⁽⁷¹⁾; o. Short-term accommodation⁽⁷⁷⁾; p. Tourist park⁽⁸⁴⁾.
PO100	AO100
Odour sensitive development is separated from landfill sites so they are not adversely affected by odour emission or other air pollutant impacts.	The following uses are not located within a Landfill buffer: a. Caretaker's accommodation ⁽¹⁰⁾ ; b. Community residence ⁽¹⁶⁾ ; c. Dual occupancy ⁽²¹⁾ ; d. Dwelling house ⁽²²⁾ ; e. Dwelling unit ⁽²³⁾ ; f. Hospital ⁽³⁶⁾ ; g. Rooming accommodation ⁽⁶⁹⁾ ; h. Multiple dwelling ⁽⁴⁹⁾ ; i. Non-resident workforce accommodation ⁽⁵²⁾ ; j. Relocatable home park ⁽⁶²⁾ ; k. Residential care facility ⁽⁶⁵⁾ ; l. Resort complex ⁽⁶⁶⁾ ; m. Retirement facility ⁽⁶⁷⁾ ; n. Rural workers' accommodation ⁽⁷¹⁾ ; o. Short-term accommodation ⁽⁷⁷⁾ ; p. Tourist park ⁽⁸⁴⁾ .
PO101	A0101
Habitable rooms within an Electricity supply substation buffer are located a sufficient distance from substations ⁽⁸⁰⁾ to avoid any potential adverse impacts on personal health and wellbeing from electromagnetic fields. Note - Habitable room is defined in the Building Code of Australia (Volume 1)	 Habitable rooms: a. are not located within an Electricity supply substation buffer; and b. proposed on a site subject to an Electricity supply supply substation⁽⁸⁰⁾ are acoustically insulted to achieve the noise levels listed in Schedule 1, Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008. Note - Habitable room is defined in the Building Code of Australia (Volume 1)
P0102	No acceptable outcome provided.
Habitable rooms within an Electricity supply substation buffer are acoustically insulated from the noise of a substation ⁽⁸⁰⁾ to achieve the noise levels listed in Schedule 1 Acoustic Quality Objectives, Environmental Protection (Noise) Policy 2008 and provides a safe, healthy and disturbance free living environment. Note - To demonstrate achievement of the performance outcome, a noise impact assessment report is prepared by a suitably qualified person. Guidance to preparing an noise impact assessment report is provided in Planning scheme policy – Noise.	
Note - Habitable room is defined in the Building Code of Australia (Volume 1)	

PO103 AO103 Development within a High voltage electricity line buffer Development does not involve the construction of any provides adequate buffers to high voltage electricity buildings or structures within a High voltage electricity line lines to protect amenity and health by ensuring buffer. development: is located and designed to avoid any potential a. adverse impacts on personal health and wellbeing from electromagnetic fields in accordance with the principle of prudent avoidance; is located and designed in a manner that b. maintains a high level of security of supply; is located and design so not to impede upon the C. functioning and maintenance of high voltage electrical infrastructure. PO104 AO104 Development does not involve the construction of any Development within a Pumping station buffer is located, designed and constructed to: buildings or structures within a Pumping station buffer. ensure that odour or other air pollutant impacts a. on the amenity of the development met the air quality of objectives in the Environmental Protection (Air) Policy 2008; ensure that noise impacts on the amenity of the b. development met the indoor noise objectives set out in the Environmental Protection (Noise) Policy 2008. Overland flow path (refer Overlay map - Overland flow path to determine if the following assessment criteria apply) Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council. PO105 No acceptable outcome provided. Development: minimises the risk to persons from overland flow; a. does not increase the potential for damage from b. overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. PO106 AO106 Development: No acceptable outcome provided. maintains the conveyance of overland flow а. predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment; b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.

		Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.
PO1	11	No acceptable outcome provided.
such	elopment protects the conveyance of overland flow that an easement for drainage purposes is ded over:	
a.	a stormwater pipe if the nominal pipe diameter exceeds 300mm;	2
b.	an overland flow path where it crosses more than one premises;	
C.	inter-allotment drainage infrastructure.	0, 6,5
	 Refer to Planning scheme policy - Integrated design for ils and examples. 	
	- Stormwater Drainage easement dimensions are provided cordance with Section 3.8.5 of QUDM.

6.2.7.4 Restricted industry precinct

6.2.7.4.1 Purpose - Restricted industry precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the Restricted industry precinct:
 - a. A range of industrial activities are established in the precinct which are of a scale and intensity where the potential of adverse impacts on sensitive receptors requires a location significantly separated from incompatible activities.
 - b. The operation and viability of existing and future industrial activities is protected from the intrusion of incompatible uses.
 - c. Industrial development is located, designed and managed to:
 - i. maintain the health and safety of people;
 - ii. avoid significant adverse effects on the natural environment;
 - iii. minimise the possibly of adverse impacts on surrounding non-industrial uses.
 - d. Development has access to infrastructure and essential services and convenient access to major transport networks.
 - e. Development is designed to incorporate sustainable practices where possible, including water sensitive design and energy efficient building design.
 - f. Development achieves a high standard of industrial design and incorporates crime prevention through environmental design (CPTED) principles.
 - g. High impact industry⁽³⁴⁾ activities do not result in detriment or danger to other development in the locality.
 - h. Development that is able to be accommodated in other locations does not establish in this precinct and reduce the limited supply of land available in this precinct.
 - i. Special industry⁽⁷⁹⁾ does not establish within the precinct.
 - j. Extensions to existing Special industry⁽⁷⁹⁾ do not increase the scale and intensity of the use.
 - k. With the exception of Caretaker's accommodation⁽¹⁰⁾, sensitive land uses, including all forms of residential development, do not occur within the precinct.
 - I. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.

- m. Development does not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
- n. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
- o. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
- p. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - i. adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;
 - viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
 - ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
 - ensuring effective and efficient disaster management response and recovery capabilities;
 - xi. where located in an overland flow path:

Χ.

- A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
- B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
- C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
- D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- q. Development in the Restricted industry precinct includes one or more of the following:

 High impact industry⁽³⁴⁾ Medium impact industry⁽⁴⁷⁾ Research and technology industry⁽⁶⁴⁾ 	•	High impact industry ⁽³⁴⁾	•	Medium impact industry ⁽⁴⁷⁾	۲	Research and technology industry ⁽⁶⁴⁾

r. Development in the Restricted industry precinct does not include any of the following:

ſ	 Adult store⁽¹⁾ 	• Funeral parlour ⁽³⁰⁾	 Parking station⁽⁵⁸⁾
	Agricultural supplies store ⁽²⁾	• Garden centre ⁽³¹⁾	 Permanent plantation⁽⁵⁹⁾
	• Air services ⁽³⁾	 Hardware and trade 	 Place of worship⁽⁶⁰⁾
	 Animal keeping⁽⁵⁾ 	supplies ⁽³²⁾	Relocatable home park ⁽⁶²⁾
	 Aquaculture⁽⁶⁾ 	Health care services ⁽³³⁾ (35)	Renewable energy facility ⁽⁶³⁾
	• Bar ⁽⁷⁾	 Home based business⁽³⁵⁾ 	 Residential care facility⁽⁶⁵⁾
	 Brothel⁽⁸⁾ 	 Hospital⁽³⁶⁾ (37) 	Resort complex ⁽⁶⁶⁾
	• Bulk landscape supplies ⁽⁹⁾	• Hotel ⁽³⁷⁾	 Retirement facility⁽⁶⁷⁾
	 Cemetery⁽¹²⁾ 	 Indoor sport and recreation⁽³⁸⁾ 	 Roadside stall⁽⁶⁸⁾
	Child care centre ⁽¹³⁾	 Intensive animal industry⁽³⁹⁾ 	 Rooming accommodation⁽⁶⁹⁾
	• Club ⁽¹⁴⁾	• Intensive horticulture ⁽⁴⁰⁾	 Rural industry⁽⁷⁰⁾
	• Community care centre ⁽¹⁵⁾	 Landing⁽⁴¹⁾ 	Rural workers' accommodation ⁽⁷¹⁾
	 Community residence⁽¹⁶⁾ 	 Low impact industry⁽⁴²⁾ 	• Sales office ⁽⁷²⁾
	Community use ⁽¹⁷⁾	• Major electricity infrastructure ⁽⁴³⁾	 Shop⁽⁷⁵⁾
	 Cropping⁽¹⁹⁾ 	Major sport, recreation and	Short-term
	 Detention facility⁽²⁰⁾ 	entertainment facility ⁽⁴⁴⁾	accommodation ⁽⁷⁷⁾
	 Dual occupancy⁽²¹⁾ 	 Market⁽⁴⁶⁾ 	 Showroom⁽⁷⁸⁾
	• Dwelling house ⁽²²⁾	 Motor sport facility⁽⁴⁸⁾ 	 Special industry⁽⁷⁹⁾
•	• Dwelling unit ⁽²³⁾	 Multiple dwelling⁽⁴⁹⁾ 	• Theatre ⁽⁸²⁾
	Educational establishment ⁽²⁴⁾	Nature-based tourism ⁽⁵⁰⁾	 Tourist attraction⁽⁸³⁾
	Environment facility ⁽²⁶⁾	 Nightclub entertainment facility⁽⁵¹⁾ 	 Tourist park⁽⁸⁴⁾
	 Extractive industry⁽²⁷⁾ 	 Non-resident workforce 	 Veterinary services⁽⁸⁷⁾
	 Food and drink outlet⁽²⁸⁾ 	accommodation ⁽⁵²⁾	• Warehouse ⁽⁸⁸⁾
	 Function facility⁽²⁹⁾ 	• Office ⁽⁵³⁾	 Wholesale nursery⁽⁸⁹⁾
	NY I	 Outdoor sales⁽⁵⁴⁾ 	 Winery⁽⁹⁰⁾
		 Outdoor sport and recreation⁽⁵⁵⁾ 	

s. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

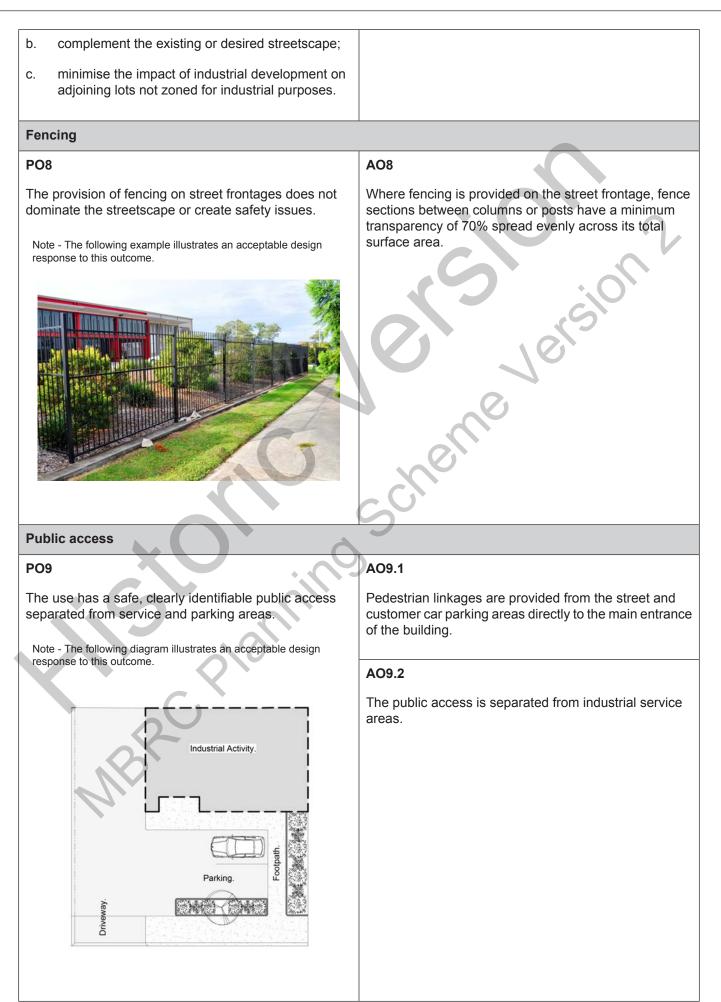

6.2.7.4.2 Criteria for assessment

Part E—Criteria for assessable development - Restricted industry precinct

Perf	formance outcomes	Acceptable outcomes
	General	I criteria
Site	cover	
PO1	I	No acceptable outcome provided.
Site	cover is limited to a proportion of a site that ensures:	
a.	A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;	· 0 · 2
b.	Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;	c sion
C.	setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;	
d.	Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.	
Buil	Iding height	CC'
indu adve	height of buildings is in keeping with the predominant Istrial character of the precinct and does not cause erse amenity impacts on surrounding sensitive land is and zones.	AO2 Building height does not exceed the maximum height identified on Overlay map - Building heights.
Sett	backs	
PO3		AO3
Stre	et boundary setbacks:	Buildings maintain a minimum setback of :
a.	minimise building bulk and visual dominance from the street;	a. 6m to the primary frontage (other than the Bruce Highway);
b.	provide areas for landscaping at the front of the site;	b. 3m to the secondary frontage;
C.	allow for customer parking to be located at the front	c. 5m to land not included in the Industry zone;
0.	of the building;	d. 10m to a boundary adjoining the Bruce Highway.
d.	Provide opportunities for dense landscaping to screen at maturity any visibility of development of a site from the Bruce Highway.	
PO4	ŀ	A04

Table 6.2.7.4.1 Assessable development - Restricted industry precinct

Side and rear boundary setbacks maintain views, privacy, access to natural light and the visual amenity of adjoining sensitive land uses.	Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m. Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.
Building appearance and design	
PO5	No acceptable outcome provided.
Where fronting an arterial or sub-arterial road, or visible from a Park ⁽⁵⁷⁾ or centre zoned lot, buildings provide a high level of architectural design which adds visual interest to the streetscape and reduces the perceived bulk of the building, by incorporating:	C S sion
a. a range of building materials, colours and features;	
b. facade articulation along street frontages;	
c. design features to promote customer entry points;	
d. materials that are not highly reflective.	C
Staff recreation area	
PO6	A06
Staff are provided with adequate and amenable break/dining facilities to suit the nature of the activities on-site.	Where the nature of the activities on-site do not allow staff to eat in their work environment, the development provides an on-site recreation area for staff that:
	a. Includes adequate seating, tables and rubbish bins for the number of staff on-site;
	b. is adequately protected from the weather;
	c. is safely accessible to all staff;
	d. is separate and private from public areas;
R	e. is located away from a noisy or odorous activity.
Landscaping	
P07	A07
 Landscaping is provided on-site to: a. visually soften the built form, areas of hardstand, storage areas and mechanical plant associated with the on-site processes; 	Landscaping is provided and maintained in accordance with Planning scheme policy - Integrated design.

Car parking	
PO10	AO10
Car parking is provided on-site to meet the anticip demands of employees and visitors and avoid ad impacts on the external road network. Note - Refer to Planning scheme policy - Integrated transpo assessment for guidance on how to achieve compliance wit outcome.	dverse - Car parking.
PO11	A011
The design of car parking areas:	All car parking areas are designed and constructed in
 does not impact on the safety of the externa network; 	al road
b. ensures the safety of pedestrians at all time	es;
 ensures the safe movement of vehicles with site. 	nin the

AO12.1 Minimum bicycle parking facilities are provided at a rat of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
 facilities prescribed in the Queensland Development Code N PO12 a. End of trip facilities are provided for employ occupants, in the building or on-site within a reasonable walking distance, and include: i. adequate bicycle parking and storage facilities; and ii. adequate provision for securing belon and 	MP 4.1. AO12.1 Minimum bicycle parking facilities are provided at a rat of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
 Note - Building work to which this code applies constitutes M facilities prescribed in the Queensland Development Code M PO12 a. End of trip facilities are provided for employ occupants, in the building or on-site within a reasonable walking distance, and include: adequate bicycle parking and storage facilities; and adequate provision for securing belom and change rooms that include adequate sh sanitary compartments, wash basins a 	MP 4.1. AO12.1 Minimum bicycle parking facilities are provided at a rat of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council. nowers, and AO12.2 Bicycle parking is: a. provided in accordance with Austroads (2008),

- ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or
- iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.

Editor's note - The intent of b above is to ensure the requirements for bicycle parking and end of trip facilities are not applied in unreasonable circumstances. For example these requirements should not, and do not apply in the Rural zone or the Rural residential zone etc.

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the acceptable outcomes under this heading meet the current performance requirement prescribed in the Queensland Development Code.

- c. located within the building or in a dedicated, secure structure for residents and staff;
- d. adjacent to building entrances or in public areas for customers and visitors.

Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.

Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO12.3

For non-residential uses, storage lockers:

- a. are provide at a rate of 1.6 per bicycle parking space (rounded up to the nearest whole number);
- b. have minimum dimensions of 900mm (height) x 300mm (width) x 450mm (depth).

Note - Storage lockers may be pooled across multiple sites and activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities.

Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.

AO12.4

For non-residential uses, changing rooms:

- a. are provided at a rate of 1 per 10 bicycle parking spaces;
- b. are fitted with a lockable door or otherwise screened from public view;
- are provided with shower(s), sanitary compartment(s) and wash basin(s) in accordance with the table below:

	Male/ Female	Change rooms required	Showers required	Sanitary compartments required	Washbasins required
--	-----------------	-----------------------------	------------------	--------------------------------------	------------------------

	1-5	Male and female	1 unisex change room	1	1 closet pan	1

Loading and servicing						
PO13	No acce	eptable	outcom	e provide	ed.	
Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads.						
Note - If landscaping is proposed for screening purposes, refer to Planning scheme policy - Integrated design for determining acceptable levels.						

Waste	
PO14 Bins and bin storage area/s are provided, designed and	No acceptable outcome provided.
managed in accordance with Planning scheme policy – Waste.	
Environmental impacts	
P015	A015
Where a use is not an environmentally relevant activity under the Environmental Protection Act, the release of any containment that may cause environmental harm is mitigated to an acceptable level.	Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.
Lighting	
PO16	A016
Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.
	Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day
Noise	
P017	No acceptable outcome provided.
Noise generating uses do not adversely affect existing or potential noise sensitive uses. Note - The use of walls, barriers or fences that are visible from or	
adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.	
Note - A noise impact assessment may be required to demonstrate compliance with this outcome. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.	
PO18	AO18.1
Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:	Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.
a. contributing to safe and usable public spaces,	AO18.2
through maintaining high levels of surveillance of parks, streets and roads that serve active transport	Noise attenuation structures (e.g. walls, barriers or fences):

purposes (e.g. existing or future pedestrian paths or cycle lanes etc);

b. maintaining the amenity of the streetscape.

Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.

Note - Refer to Planning Scheme Policy – Integrated design for details and examples of noise attenuation structures.

- a. are not visible from an adjoining road or public area unless:
 - i. adjoining a motorway or rail line; or
 - ii. adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location and materials is not possible.
- b. do not remove existing or prevent future active transport routes or connections to the street network;
- c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.

Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures.

Note - Refer to Overlay map – Active transport for future active transport routes.

Hazardous Chemicals

Note - To assist in demonstrating compliance with the following performance outcomes, a Hazard Assessment Report may be required to be prepared and submitted by a suitably qualified person in accordance with '*State Planning Policy Guideline - Guidance on development involving hazardous chemicals*'.

Terms used in this section are defined in State 'State Planning Policy Guideline - Guidance on development involving hazardous chemicals'.

PO19

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use

zones.

AO19.1

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:

Dangerous Dose

- a. For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

	1
	If criteria AO20.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5 x 10-6/year.
	AO19.2
	Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:
	Dangerous Dose
	a. For any hazard scenario involving the release of gases or vapours:
	i. AEGL2 (60minutes) or if not available ERPG2;
	ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
	b. For any hazard scenario involving fire or explosion:
	i. 7kPa overpressure;
• C 1	ii. 4.7kW/m2 heat radiation.
	If criteria AO20.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.
	AO19.3
12 anni	Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:
	Dangerous Dose
	a. For any hazard scenario involving the release of gases or vapours:
	i. AEGL2 (60minutes) or if not available ERPG2;
	ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
	b. For any hazard scenario involving fire or explosion:
	i. 14kPa overpressure;
	ii. 12.6kW/m2 heat radiation.

	If criteria AO20.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.
PO20	AO20
Buildings and package stores containing fire-risk hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.	Buildings and package stores containing fire-risk hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.
PO21	A021
Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.	Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.
PO22	A022.1
Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government "flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.	 The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively: a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and b. tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.
	A022.2
C Planti	The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.
Emissions into Brisbane operational airspace	
PO23	AO23.1
Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport's operational airspace.	Development does not emit a gaseous plume into the airport's operational airspace at a velocity exceeding 4.3m per second.
Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport's operational airspace	AO23.2
	Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.

PO	24	No acceptable outcome provided
a.	Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	
b.	Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.	
C.	Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner	C Jersie
	te: Further guidance on habitat trees is provided in Planning neme policy - Environmental areas	ne
	Works	criteria
Util	ities	~ G
elec	25 e development is connected to an existing reticulated stricity supply system approved by the relevant energy ulating authority.	AO25 Development is connected to underground electricity.
	26 e development has access to telecommunications and adband services in accordance with current standards.	No acceptable outcome provided
PO	27	AO27.1
of s	e development provides for the treatment and disposal ewage and other waste water in a way that will not se environmental harm or pose a risk to public health.	Where in a sewered area, the development is connected to a reticulated sewerage network.
	6.	AO27.2 Trade waste is pre-treated on-site prior to discharging into the sewerage network.
PO	28	AO28
	e development is provided with an adequate and tainable supply of potable (drinking and general use	Where in an existing connections area or a future connections area as detailed in the Unitywater

	South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.
PO29	No acceptable outcome provided
The development is provided with constructed and dedicated road access.	
Access	
PO30	No acceptable outcome provided
Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.	ersion.
PO31	A031.1
The layout of the development does not compromise:a. the development of the road network in the area;b. the function or safety of the road network;c. the capacity of the road network.	The development provides for the extension of the road network in the area in accordance with Council's road network planning.
Note - The road hierarchy is mapped on Overlay map - Road hierarchy.	The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.
	AO31.3 The lot layout allows forward access to and from the site.
PO32	AO32
Safe access is provided for all vehicles required to access the site.	Site access and driveways are designed and located in accordance with:
MBK	 a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
	AO32.2
	Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

 PO33 Upgrade works (whether trunk or non-trunk) are provided where necessary to: a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network; b. ensure the orderly and efficient continuation of the active transport network; c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design. Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated design. Note - An Integrated Transport Assessment (ITA) should be prepared in accordance with Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared in accordance with Planning scheme policy - Integrated transport assessment. Note - The road network is mapped on Overlay map - Road hierarchy. Note - The primary and secondary active transport network is mapped on Overlay map - Road hierarchy. Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows: Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated transport Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve. 	Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction. AC32.3 Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements. No acceptable outcome provided
network and active transport network design standards.	
PO34	No acceptable outcome provided

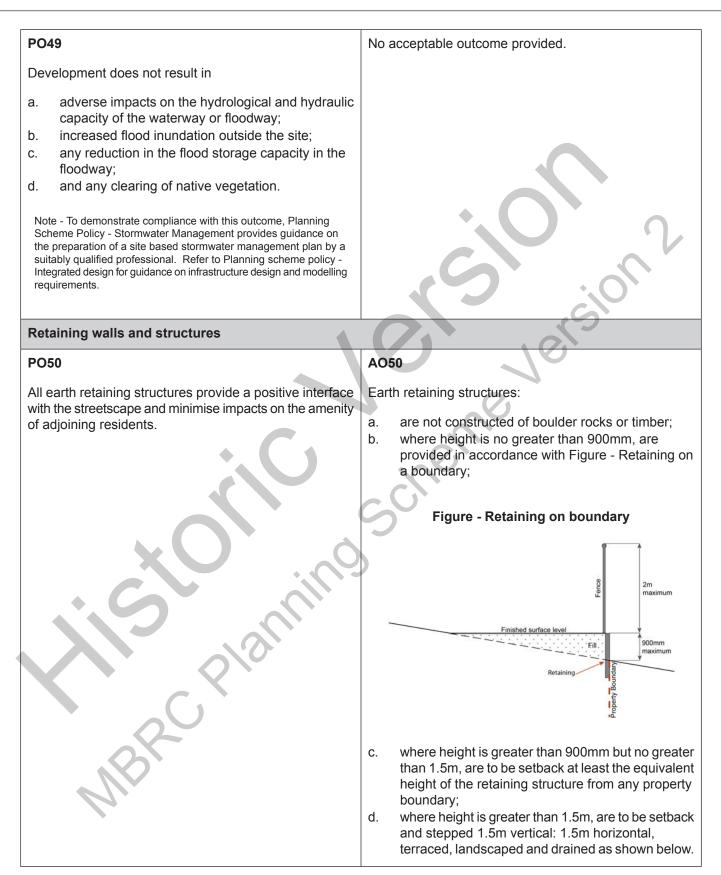

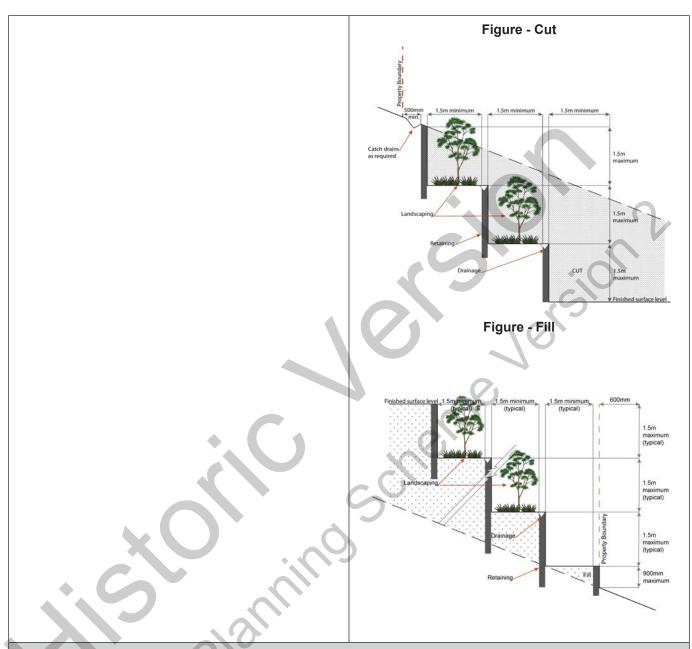

PO38	No acceptable outcome provided
The site and any existing structures are maintained in a tidy and safe condition.	
PO39	AO39.1
 All works on-site are managed to: a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light; b. minimise as far as possible, impacts on the natural environment; c. ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises; d. avoid adverse impacts on street trees and their critical root zone. 	 Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following: a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions; b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion; c. stormwater discharge rates do not exceed pre-existing conditions; d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and e. the 50% AEP storm event is the minimum design storm for all silt barriers and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness. Note - The measures are adjusted on-site to maximise their effectiveness. AO39.3 The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.
PO40	AO40
	No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.	
PO41	AO41.1
All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape. Note - Where the amount of imported or exported material is greater than 50m ³ , a haulage route must be identified and approved by Council.	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. AO41.2 All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD). AO41.3 Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
P042	AO42
All disturbed areas are rehabilitated at the completion of construction.	At completion of construction all disturbed areas of the site are to be:
Note - Refer to Planning scheme policy - Integrated design for details.	a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;b. grassed.
RC	Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.
PO43	AO43.1
The clearing of vegetation on-site:	All native vegetation to be retained on-site is temporarily
a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and	fenced or protected prior to and during development works.
b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;	Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.
 c. is disposed of in a manner which minimises nuisance and annoyance to existing premises. 	AO43.2
Note - No burning of cleared vegetation is permitted.	Disposal of materials is managed in one or more of the following ways:

PO44 Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of	 a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site. Note - The chipped vegetation must be stored in an approved location, preferably a park or public land. No acceptable outcome provided
public utility services is to be carried with the development and at no cost to Council.	
Earthworks	
PO45	AO45.1
 On-site earthworks are designed to consider the visual and amenity impact as they relate to: a. the natural topographical features of the site; b. short and long-term slope stability; c. soft or compressible foundation soils; d. reactive soils; e. low density or potentially collapsing soils; f. existing fill and soil contamination that may exist on-site; g. the stability and maintenance of steep rock slopes and batters; h. excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential). Note - Filling or excavation works are to be completed within six months of the commencement date.	All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary.
	AO45.2 Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters.
	AO45.3 Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ.
	AO45.4 All filling or excavation is contained on-site.
	 AO45.5 All fill placed on-site is: a. limited to that required for the necessary approved use; b. clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

AO45.6
The site is prepared and the fill placed on-site in accordance with AS3798.
Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.
AO46
Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.
Figure - Embankment
A047.1
No filling or excavation is undertaken in an easement
issued in favour of Council or a public sector entity. Note - Public sector entity as defined in the Sustainable Planning Act 2009.
AO47.2
Filling or excavation that would result in any of the following is not carried out on-site:
a. a reduction in cover over any Council or public sector entity infrastructure service to less than
 600mm; b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken.
Note - Public sector entity as defined in the Sustainable Planning Act 2009.
No acceptable outcome provided

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates: а.
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or i.
 - material change of use for 2 or more sole control park ⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for a Tourist park ⁽⁸⁴⁾, with accommodation in the form of caravans or tents; or material change of use for outdoor sales ⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials. ii. iii.
 - iv.

AND

none of the following exceptions apply: b

- the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated i. water supply; or
- ii every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO51

Development incorporates a fire fighting system that:

- a. satisfies the reasonable needs of the fire fighting entity for the area;
- b. is appropriate for the size, shape and topography of the development and its surrounds;
- c. is compatible with the operational equipment available to the fire fighting entity for the area;
- d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
- e. considers the fire hazard inherent in the surrounds to the development site;
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

AO51.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.*

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

- a. in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks⁽⁸⁴⁾ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
 - in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
 - in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; for outdoor sales⁽⁵⁴⁾, processing or storage facilities,
 - hydrant coverage is required across the entire area of the outdoor sales⁽⁵⁴⁾, outdoor processing and outdoor storage facilities;
- d. in regard to fire hydrant accessibility and clearance requirements Part 3.5 and, where applicable, Part 3.6.

AO51.2

C.

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO51.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

PO52	AO52

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes	For development that contains on-site fire hydrants external to buildings:			
to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.	a. those external hydrants can be seen from the vehicular entry point to the site; or			
	b. a sign identifying the following is provided at the vehicular entry point to the site:			
	i. the overall layout of the development (to scale);			
	ii. internal road names (where used);			
	iii. all communal facilities (where provided);			
	iv. the reception area and on-site manager's office (where provided);			
	v. external hydrants and hydrant booster points;			
	vi. physical constraints within the internal roadway system which would restrict access			
	by fire fighting appliances to external hydrants and hydrant booster points.			
+ C1				
	Note - The sign prescribed above, and the graphics used are to be:			
	a. in a form;b. of a size;			
	b. of a size;c. illuminated to a level;			
	which allows the information on the sign to be readily understand			
	which allows the information on the sign to be readily understood, at all times, by a person in a fire fighting appliance up to 4.5m from the sign.			
P053	AO53			
Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified at all times by the occupants of any firefighting appliance traversing the development site.	For development that contains on-site fire hydrants external to buildings, those hydrants are identified by way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note <i>Fire hydrant indication system</i> produced by the Queensland Department of Transport and Main Roads.			
	Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.			
Use specific criteria				
Industrial Land Uses				
PO54	A054			

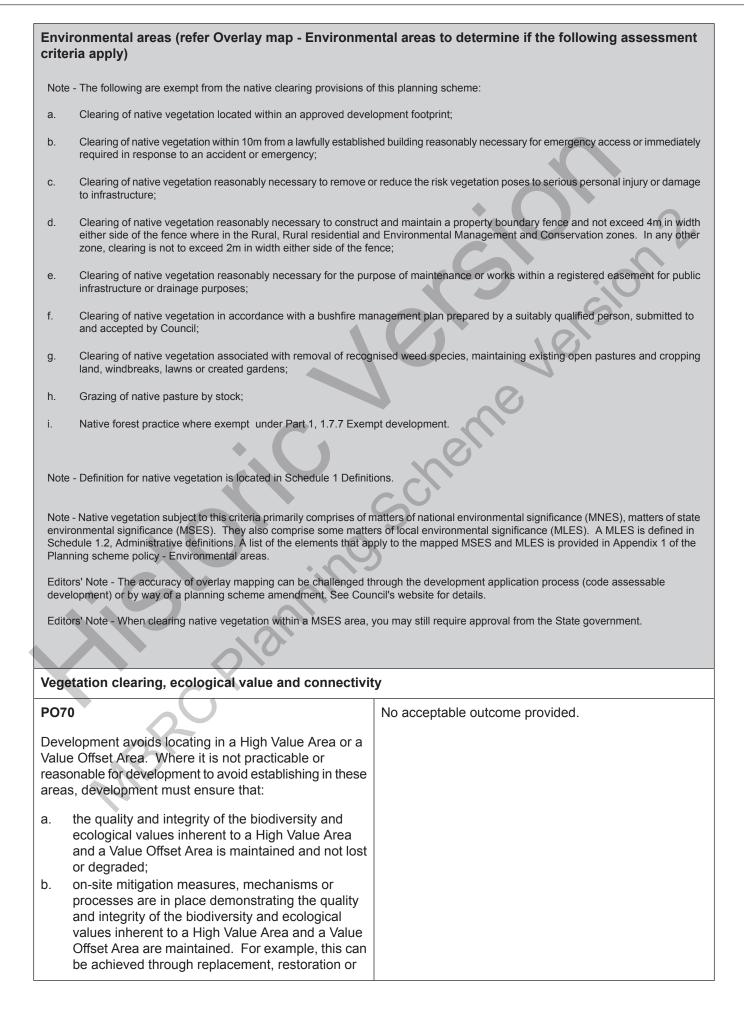

Ancillary office ⁽⁵³⁾ , administration functions, retail sales, showroom ⁽⁷⁸⁾ and customer service components do not compromise the primary use of the site or other industrial activities in the precinct, or affect the viability, role or function of the region's centres network.	The combined area of ancillary non-industrial activities, including but not limited to administration and retail functions, does not exceed 10% of the GFA or 200m ² , whichever is the lesser.	
PO55 High impact industry ⁽³⁴⁾ uses maintain a minimum separation of at least 500m from a sensitive land use. Note - Separation distance is to be measured in a straight line, in accordance with the State policy.	No acceptable outcome provided	
PO56 Special industry ⁽⁷⁹⁾ uses do not establish within the restricted industry precinct.	No acceptable outcome provided	
PO57 Uses that can be readily accommodated within other zones or precincts do not compromise the availability of land within the restricted industry precinct. Note - Low impact industry ⁽⁴²⁾ Medium impact industry ⁽⁴⁷⁾ , Service industry ⁽⁷³⁾ and Warehouse ⁽⁸⁸⁾ land uses are considered to be able to be readily accommodated within other precincts of the Industry Zone.	No acceptable outcome provided	
Caretaker's accommodation ⁽¹⁰⁾		
P058	AO58	
Development of Caretaker's accommodation ⁽¹⁰⁾ :	Caretaker's accommodation ⁽¹⁰⁾ :	
a. does not compromise the productivity of the use occurring on-site and in the surrounding area;	a. has a maximum GFA is 80m ² ;	
b. is domestic in scale;	b. does not gain access from a separate driveway to that of the industrial use;	
c. provides adequate car parking provisions exclusive on the primary use of the site;	c. provides a minimum 16m ² of private open space directly accessible from a habitable room;	
d. is safe for the residents;	d. provides car parking in accordance with Schedule 7 - Car parking.	
e. has regard to the open space and recreation needs of the residents.		
Sales office ⁽⁷²⁾		
PO59	AO59	
Sales office ⁽⁷²⁾ remain temporary in duration and demonstrates a relationship to the land or buildings being displayed or sold.	A Sales office ⁽⁷²⁾ is located on the site for no longer than 2 years.	

Major electricity infrastructure ⁽⁴³⁾ , Substation ⁽⁸⁰⁾ and Utility installation ⁽⁸⁶⁾			
PO60	AO60.1		
 The development does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; c. not visually dominant or intrusive; d. located behind the main building line; e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures; f. camouflaged through the use of colours and materials which blend into the landscape; g. treated to eliminate glare and reflectivity; h. landscaped; i. otherwise consistent with the amenity and character of the zone and surrounding area. 	 Development is designed to minimise surrounding land use conflicts by ensuring infrastructure, buildings, structures and other equipment: a. are enclosed within buildings or structures; b. are located behind the main building line; c. have a similar height, bulk and scale to the surrounding fabric; d. have horizontal and vertical articulation applied to all exterior walls. AO60.2 A minimum 3m wide strip of dense planting is provided around the outside of the fenced area, between the development and street frontage, side and rear boundaries.		
PO61 Infrastructure does not have an impact on pedestrian health and safety.	 AO61 Access control arrangements: a. do not create dead-ends or dark alleyways adjacent to the infrastructure; b. minimise the number and width of crossovers and entry points; c. provide safe vehicular access to the site; d. do not utilise barbed wire or razor wire. 		
 PO62 All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility: a. generates no audible sound at the site boundaries where in a residential setting; or b. meet the objectives as set out in the Environmental Protection (Noise) Policy 2008. 	AO62 All equipment which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure noise emissions meet the objectives as set out in the Environmental Protection (Noise) Policy 2008.		
Telecommunications facility ⁽⁸¹⁾ Editor's note - In accordance with the Federal legislation Telecommunications facilities ⁽⁸¹⁾ must be constructed and operated in a manner that will not cause human exposure to electromagnetic radiation beyond the limits outlined in the Radiocommunications (Electromagnetic Radiation - Human Exposure) Standard 2003 and Radio Protection Standard for Maximum Exposure Levels to Radiofrequency Fields - 3Khz to 300Ghz.			
PO63	AO63.1		
Telecommunications facilities ⁽⁸¹⁾ are co-located with existing telecommunications facilities ⁽⁸¹⁾ , Utility installation ⁽⁸⁶⁾ , Major electricity infrastructure ⁽⁴³⁾ or Substation ⁽⁸⁰⁾ if there is already a facility in the same	New telecommunication facilities ⁽⁸¹⁾ are co-located on existing towers with new equipment shelter and associated structures positioned adjacent to the existing shelters and structures.		

coverage area.

	AO63.2	
	If not co-located with an existing facility, all co-location opportunities have been investigated and fully exhausted within a 2km radius of the site.	
 PO64 A new Telecommunications facility⁽⁸¹⁾ is designed and constructed to ensure co-masting or co-siting with other carriers both on the tower or pole and at ground level is possible in the future. PO65 Telecommunications facilities⁽⁸¹⁾ do not conflict with lawful existing land uses both on and adjoining the site. 	 AO64 A minimum of 45m² is available at ground level to allow for additional equipment shelters and associated structures for the purpose of co-locating on the proposed facility. AO65 The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing 	
	development approval.	
PO66	AO66.1	
 The Telecommunications facility⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; c. not visually dominant or intrusive; 	Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape.	
located behind the main building line; below the level of the predominant tree canopy or the level of the surrounding buildings and structures;	AO66.2 In all other areas towers do not exceed 35m in height.	
f. camouflaged through the use of colours and	AO66.3	
materials which blend into the landscape;g. treated to eliminate glare and reflectivity;h. landscaped;	Towers, equipment shelters and associated structures are of a design, colour and material to:	
i. otherwise consistent with the amenity and character of the zone and surrounding area.	a. reduce recognition in the landscape;b. reduce glare and reflectivity.	
	AO66.4	
MBK	All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m.	
	Where there is no established building line the facility is located at the rear of the site.	
	AO66.5	
	The facility is enclosed by security fencing or by other means to ensure public access is prohibited.	

	·				
	AO66.6				
	A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design. Note - Council may require a detailed landscaping plan, prepared by a suitably qualified person, to ensure compliance with Planning scheme policy - Integrated design.				
PO67	A067				
Lawful access is maintained to the site at all times that does not alter the amenity of the landscape or surrounding uses.	An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.				
PO68	AO68				
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.	All equipment comprising the Telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.				
	5				
Values and constraints criteria Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme. Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply) Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m ³ and 500m ³ respectively.					
PO69	AO69				
 Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development: a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment; b. protects the environmental and ecological values and health of receiving waters; c. protects buildings and infrastructure from the effects of acid sulfate soils. 	 Development does not involve: a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD. 				

rehabilitation planting as part of any proposed covenant, the development of a Vegetation Management Plan, a Fauna Management Plan, and any other on-site mitigation options identified in the Planning scheme policy - Environmental areas*. * Editor's note - This is not a requirement for an environmental offset under the Environmental Offsets Act 2014.	
P071	No acceptable outcome provided.
 Development provides for safe, unimpeded, convenient and ongoing wildlife movement and establishes and maintains habitat connectivity by: a. retaining habitat trees; b. providing contiguous patches of habitat; c. provide replacement and rehabilitation planting to improve connectivity; d. avoiding the creation of fragmented and isolated patches of habitat; e. providing wildlife movement infrastructure. Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. 	scheme
Vegetation clearing and habitat protection	
PO72 Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	No acceptable outcome provided.
 P073 Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will: a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework. 	No acceptable outcome provided.
P074	No acceptable outcome provided.

	elopment ensures safe, unimpeded, convenient and bing wildlife movement and habitat connectivity by:	
a. b.	providing contiguous patches of habitat; avoiding the creation of fragmented and isolated patches of habitat;	
C.	providing wildlife movement infrastructure;	
d.	providing replacement and rehabilitation planting to improve connectivity.	
Vege	etation clearing and soil resource stability	
PO7		No acceptable outcome provided.
Deve	elopment does not:	
a.	result in soil erosion or land degradation;	
b.	leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.	6
	etation clearing and water quality	
PO7	6	No acceptable outcome provided.
	elopment maintains or improves the quality of	
-	ndwater and surface water within, and downstream,	
ofa	site by:	
a.	ensuring an effective vegetated buffers and	
u.	setbacks from waterbodies is retained to achieve	
	natural filtration and reduce sediment loads;	
b.	avoiding or minimising changes to landforms to	
	maintain hydrological water flows;	
C.	adopting suitable measures to exclude livestock	
	from entering a waterbody where a site is being (4)	
	used for animal husbandry ⁽⁴⁾ and animal keeping ⁽⁵⁾ activities.	
	activities.	
P07	7	No acceptable outcome provided.
	elopment minimises adverse impacts of stormwater	
run-o	off on water quality by:	
a.	minimising flow velocity to reduce erosion;	
b.	minimising hard surface areas;	
C.	maximising the use of permeable surfaces;	
d.	incorporating sediment retention devices;	
e.	minimising channelled flow.	
Vege	etation clearing and access, edge effects and urb	oan heat island effects
PO7	8	No acceptable outcome provided.
Deve	elopment retains safe and convenient public access	
	manner that does not result in the adverse edge	
	ts or the loss or degradation of biodiversity values	
	n the environment.	
PO7	9	No acceptable outcome provided.
L		

Development minimises potential adverse 'edge effects' on ecological values by:	
 a. providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest 	
possible size where located between a development and environmental areas ;	
c. restoring, rehabilitating and increasing the size of existing patches of native vegetation;	
 ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors; Independent with pative planta of least arisin 	2
 e. landscaping with native plants of local origin. Editor's note - Edge effects are factors of development that go to 	
detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.	C Jersie
PO80	No acceptable outcome provided.
Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by:	one
a. pervious surfaces;	
 b. providing deeply planted vegetation buffers and green linkage opportunities; 	S
c. landscaping with local native plant species to achieve well-shaded urban places;	
d. increasing the service extent of the urban forest canopy.	
Vegetation clearing and Matters of Local Environment	ntal Significance (MLES) environmental offsets
P081	No acceptable outcome provided.
Where development results in the unavoidable loss of native vegetation within a Value Offset Area MLES waterway buffer or a Value Offset Area MLES wetland buffer, an environmental offset is required in accordance with the environmental offset requirements identified in	
Planning scheme policy - Environmental areas.	
Editor's note - For MSES Koala Offsets, State Planning Regulatory Provision environmental offset provisions apply.	
Heritage and landscape character (refer Overlay mag the following assessment criteria apply)	- Heritage and landscape character to determine if
Note - To assist in demonstrating achievement of heritage performance by a suitably qualified person verifying the proposed development is in	e outcomes, a Cultural heritage impact assessment report is prepared n accordance with The Australia ICOMOS Burra Charter.
Note. To assist in domonstrating achievement of this performance of	teame a Trac assessment report is prepared by a qualified arborist in

Note - To assist in demonstrating achievement of this performance outcome, a Tree assessment report is prepared by a qualified arborist in accordance with Planning scheme policy – Heritage and landscape character. The Tree assessment report will also detail the measures adopted in accordance with AS 4970-2009 Protection of trees on development sites.

Note - Places, including sites, objects and buildings having local cultural heritage significance, are identified on Overlay map - Heritage and landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.

AO82

heritage value.

Development is for the preservation, maintenance, repair

and restoration of a site, object or building of cultural

Note - A cultural heritage conservation management plan for the

preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with

Planning scheme policy - Heritage and landscape character. The

of any preservation, maintenance, repair and restoration works.

No acceptable outcome provided.

plan is sent to, and approved by Council prior to the commencement

PO82

Development will:

- a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building;
- b. protect the fabric and setting of the heritage site, object or building;
- c. be consistent with the form, scale and style of the heritage site, object or building;
- utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes;
- e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building;
- f. retain public access where this is currently provided.

PO83

Demolition and removal is only considered where:

Bemolition and removal is only considered where.	
a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or	
 b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or c. limited demolition is performed in the course of repairs, maintenance or restoration; or 	
 demolition is performed following a catastrophic event which substantially destroys the building or object. 	
P084	No acceptable outcome provided.
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.	
PO85	AO85
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction	Development does: a. not result in the removal of a significant tree;

measures and techniques as detailed in AS 4970-2009	 b. not occur within 20m of a protected tree; c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of 				
Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality.					
Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.	Amenity Trees.				
Overland flow path (refer Overlay map - Overland flow apply)	path to determine if the following assessment criteria				
Note - The applicable river and creek flood planning levels associated obtained by requesting a flood check property report from Council.	d with defined flood event (DFE) within the inundation area can be				
PO86	No acceptable outcome provided.				
Development:					
 a. minimises the risk to persons from overland flow; b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. 	neme				
P087	A087				
Development:	No acceptable outcome provided.				
a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment;					
b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property.					
Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.					
Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.					
PO88	No acceptable outcome provided.				
Development does not:					
a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level;					
 b. increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure. 					

Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring.	
PO89	AO89
Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.	Development ensures that a hazardous chemical is not located or stored in an Overland flow path area. Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.
PO90	AO90
Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.	Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.
PO91	A091.1
Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.	Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM: a. Urban area – Level III; b. Rural area – N/A; c. Industrial area – Level V; d. Commercial area – Level V. AO91.2
Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow	Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment.
P092	No acceptable outcome provided.
 Development protects the conveyance of overland flow such that an easement for drainage purposes is provided over: a. a stormwater pipe if the nominal pipe diameter exceeds 300mm; b. an overland flow path where it crosses more than one premises; c. inter-allotment drainage infrastructure. Note - Refer to Planning scheme policy - Integrated design for details and examples.	

Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM.					
Additional criteria for development for a Park ⁽⁵⁷⁾	I				
PO93	PO93				
Development for a Park ⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:	Development for a Park ⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.				
a. public benefit and enjoyment is maximised;					
 b. impacts on the asset life and integrity of park structures is minimised; 					
c. maintenance and replacement costs are minimised.	C SI				
Riparian and wetland setbacks	0				
P094	A094				
Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters:	Development does not occur within: a. 50m from top of bank for W1 waterway and drainage line				
a. impact on fauna habitats;	 b. 30m from top of bank for W2 waterway and drainage line 				
b. impact on wildlife corridors and connectivity;c. impact on stream integrity;	c. 20m from top of bank for W3 waterway and drainage line				
d. impact of opportunities for revegetation and rehabilitation planting;	d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands.				
e. edge effects.	Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.				
NBR	1				

6.2.7.5 Marine industry precinct

6.2.7.5.1 Purpose - Marine industry precinct

- 1. The purpose of the code will be achieved through the following overall outcomes for the Marine Industry Precinct:
 - a. Development in the precinct supports the continued viability of waterfront-based industry in the region, through the co-location of Port services⁽⁶¹⁾, Marine industry⁽⁴⁵⁾ and related activities which support industry and its supply chain.
 - b. Development in the precinct avoids land-use activities which:
 - i. compromise or sterilise existing or future waterfront based industrial activities in the precinct;
 - ii. undermine the investment made in waterfront and marine infrastructure, including marinas and access roads;
 - iii. occupy large land areas and do not require waterfront access.
 - c. Development for non-industrial uses including Caretaker's accommodation⁽¹⁰⁾, Food and drink outlets⁽²⁸⁾ and community activities may be established in the precinct where they require access to a navigable waterway or provide support or complementary services to maritime activities.
 - d. The scale, character and built form of development has a high standard of commercial and industrial design which reflects the maritime character of the precinct and incorporates crime prevention through environmental design (CPTED) principles.
 - e. Development is located, designed and managed to maintain the health and safety of people, avoid significant adverse effects on the natural environment and minimise the possibility of adverse impacts on nearby non-industrial uses.
 - f. Development has access to infrastructure and essential services and convenient access to major transport routes.
 - g. Sensitive land uses in the precinct do not compromise existing or future industrial activities.
 - h. Special industry⁽⁷⁹⁾ does not establish within the precinct.
 - i. Service industry, Warehouse⁽⁸⁸⁾, Low impact industry⁽⁴²⁾ and Medium impact industry⁽⁴⁷⁾ uses only occur in the precinct where:
 - i. there is a direct nexus with maritime activities occurring in the precinct;
 - ii. Involving manufacturing, repair, processing, storage or maintenance activities associated with watercraft or seafood;
 - iii. appropriate separation distances are maintained to sensitive land uses.
 - j. Built form including height of buildings used for the storage or repair of medium to large scale vessels contribute to a high standard of amenity and are sensitively located to minimise any adverse impacts on adjoining properties.
 - k. Development incorporates best practice responses to the environmental constraints and values of it's location adjacent to coastal areas and waterways.
 - I. Development does not compromise the safe and efficient operation of adjacent waterways.
 - m. Development in the Scarborough Harbour:
 - i. incorporates a range of waterfront industrial and related commercial activities which support the continued growth of the harbour;

- ii. may include activities which do not require waterfront access or have a nexus with Marine industry⁽⁴⁵⁾, only where these activities enhance the competitive advantage of the Marine industry⁽⁴⁵⁾ cluster and ensure the area is an attractive place to work and do business;
- iii. may only incorporate sensitive land uses where these uses are appropriately separated from existing and future industrial activities and do not compromise the long-term development of the harbour.
- n. General works associated with the development achieves the following:
 - i. new development is provided with a high standard of services to meet and support the current and future needs of users of the site, including roads, street lighting services, telecommunications and reticulated electricity (underground wherever possible), water and sewerage (where available);
 - ii. the development manages stormwater to:
 - A. ensure the discharge of stormwater does not adversely affect the quality, environmental values or ecosystem functions of downstream receiving waters;
 - B. prevent stormwater contamination and the release of pollutants;
 - C. maintain or improve the structure and condition of drainage lines and riparian areas;
 - D. avoid off-site adverse impacts from stormwater.
 - iii. the development does not result in unacceptable impacts on the capacity and safety of the external road network;
 - iv. the development ensures the safety, efficiency and useability of access ways and parking areas;
 - v. site works including earthworks are managed to be safe and have minimal impacts on adjoining or adjacent premises, the streetscape or the environment.
- o. Activities associated with the use do not cause a nuisance by way of aerosols, fumes, light, noise, odour, particles or smoke.
- p. Noise generating uses are designed, sited and constructed to minimise the transmission of noise to appropriate levels and do not cause environmental harm or nuisance.
- q. Noise sensitive uses are designed, sited and constructed so as not to be subject to unacceptable levels of noise.
- r. Development avoids areas subject to constraint, limitation, or environmental value. Where development cannot avoid these identified areas, it responds by:
 - adopting a 'least risk, least impact' approach when designing, siting and locating development in any area subject to a constraint, limitation or environmental value to minimise the potential risk to people, property and the environment;
 - ii. ensuring no further instability, erosion or degradation of the land, water or soil resource;
 - iii. when located within a Water buffer area, complying with the Water Quality Vision and Objectives contained in the Seqwater Development Guidelines: Development Guidelines for Water Quality Management in Drinking Water Catchments 2012.
 - iv. maintaining, restoring and rehabilitating environmental values, including natural, ecological, biological, aquatic, hydrological and amenity values, and enhancing these values through the provision of planting and landscaping, and facilitating safe wildlife movement and connectivity through:
 - A. the provision of replacement, restoration, rehabilitation planting and landscaping;
 - B. the location, design and management of development to avoid or minimise adverse impacts on ecological systems and processes;
 - C. the requiring of environmental offsets in accordance with the Environmental Offsets Act 2014.
 - v. protecting native species and protecting and enhancing species habitat;
 - vi. protecting and preserving the natural, aesthetic, architectural historic and cultural values of significant trees, places, objects and buildings of heritage and cultural significance;
 - vii. establishing effective separation distances, buffers and mitigation measures associated with identified infrastructure to minimise adverse effects on sensitive land uses from odour, noise, dust and other nuisance generating activities;

- viii. establishing, maintaining and protecting appropriate buffers to waterways, wetlands, native vegetation and significant fauna habitat;
- ix. ensuring it promotes and does not undermine the ongoing viability, integrity, operation, maintenance and safety of identified infrastructure;
- x. ensuring effective and efficient disaster management response and recovery capabilities;
- xi. where located in an overland flow path:
 - A. development siting, built form, layout and access responds to the risk presented by the overland flow and minimises risk to personal safety;
 - B. development is resilient to the impacts of overland flow by ensuring the siting and design accounts for the potential risks to property associated with the overland flow;
 - C. development does not impact on the conveyance of the overland flow for any event up to and including the 1% AEP for the fully developed upstream catchment;
 - D. development directly, indirectly and cumulatively avoid an increase in the severity of overland flow and potential for damage on the premises or other premises, public lands, watercourses, roads or infrastructure.
- s. Development in the Marine industry precinct includes one or more of the following:

• Aquaculture ⁽⁶⁾ -if in a	Environment facility ⁽²⁶⁾	Marine industry ⁽⁴⁵⁾
building	 Food and drink outlet⁽²⁸⁾ - 	Port services ⁽⁶¹⁾
 Caretaker's accommodation⁽¹⁰⁾ 	if a maximum GFA of 100m ²	Sales office ⁽⁷²⁾
• Emergency services ⁽²⁵⁾	• Landing ⁽⁴¹⁾	

t. Development in the Marine industry precinct does not include any of the following:

Г						
	•	Adult store ⁽¹⁾	•	Extractive industry ⁽²⁷⁾	•	Parking station ⁽⁵⁸⁾
	•	Agricultural supplies store ⁽²⁾	•	Function facility ⁽²⁹⁾	•	Permanent plantation ⁽⁵⁹⁾
	•	Air services ⁽³⁾ - if not in	\mathbf{O}	Funeral parlour ⁽³⁰⁾	•	Place of worship ⁽⁶⁰⁾
		Scarborough Harbour	•	Garden centre ⁽³¹⁾	•	Relocatable home park ⁽⁶²⁾
		Animal husbandry ⁽⁴⁾	•	Health care services ⁽³³⁾	•	Renewable energy facility ⁽⁶³⁾
	•	Animal keeping ⁽⁵⁾	•	Hospital ⁽³⁶⁾	•	Residential care facility ⁽⁶⁵⁾
	•	Bar ⁽⁷⁾	•	Hotel ⁽³⁷⁾	•	Resort complex ⁽⁶⁶⁾
	• <	Brothel ⁽⁸⁾	•	Indoor sport and	•	Retirement facility ⁽⁶⁷⁾
	•	Cemetery ⁽¹²⁾		recreation ⁽³⁸⁾	•	Roadside stall ⁽⁶⁸⁾
	7	Child care centre ⁽¹³⁾	•	Intensive animal industry ⁽³⁹⁾		Rooming accommodation ⁽⁶⁹⁾
	•	Club ⁽¹⁴⁾ - if not in	•	Intensive horticulture ⁽⁴⁰⁾	•	
		Scarborough Harbour	•	Major electricity	•	Rural industry ⁽⁷⁰⁾
	•	Community care centre ⁽¹⁵⁾		infrastructure ⁽⁴³⁾	•	Rural workers' accommodation ⁽⁷¹⁾
	•	Community residence ⁽¹⁶⁾	•	Major sport, recreation and	•	Shopping centre
	•	Community use ⁽¹⁷⁾		entertainment facility ⁽⁴⁴⁾	Þ	
L						

•	Crematorium ⁽¹⁸⁾	•	Motor sport facility ⁽⁴⁸⁾	•	Short-term accommodation ⁽⁷⁷⁾ - if not in
•	Cropping ⁽¹⁹⁾	•	Multiple dwelling ⁽⁴⁹⁾		Scarborough Harbour
•	Detention facility ⁽²⁰⁾	•	Nature-based tourism ⁽⁵⁰⁾	•	Showroom ⁽⁷⁸⁾
•	Dual occupancy ⁽²¹⁾	•	Non-resident workforce	•	Special industry ⁽⁷⁹⁾
•	Dwelling house ⁽²²⁾		accommodation	•	Theatre ⁽⁸²⁾
•	Dwelling unit ⁽²³⁾	•	Nightclub entertainment facility ⁽⁵¹⁾	•	Tourist park ⁽⁸⁴⁾
•	Educational establishment ⁽²⁴⁾	•	Office ⁽⁵³⁾	•	Veterinary services ⁽⁸⁷⁾
		•	Outdoor sport and recreation ⁽⁵⁵⁾	•	Wholesale nursery ⁽⁸⁹⁾
			recreation		Winery ⁽⁹⁰⁾
					S

u. Development not listed above may be considered on its merits and where it reflects and supports the outcomes of the precinct.

6.2.7.5.2 Criteria for assessment

Part F—Criteria for assessable development - Marine industry precinct

Table 6.2.7.5.1 Assessable development - Marine industry precinct

Performance outcomes	Acceptable outcomes
General	criteria
Development in the Marine industry precinct general	ly
PO1 Development in the precinct is for marine-based industrial activities or commercial activities which have a direct nexus with maritime activities in the precinct.	No acceptable outcome provided.
PO2 Development does not compromise the role of Scarborough harbour providing public facilities for boat launching and access to deep water.	AO2 Development does not obstruct existing public access to boat launching facilities.
PO3 Watercraft traffic generated by the development remains within the capacity of the adjacent waterways and and navigational facilities.	No acceptable outcome provided.
Site cover	
PO4 Site cover is limited to a proportion of a site that ensures:	No acceptable outcome provided.

- A sufficient number and type of vehicle parking spaces are provided on the site to meet the parking demands and expectations of the proposed use;
- Any type of vehicle expected to visit the site on a regular basis is able to access and leave the site in a forward direction with clear manoeuvring on the site;
- c. setbacks to boundaries maximise the efficient use of the site while ensuring positive interfaces with public space or sensitive land uses;
- d. Areas of landscaping are provided to soften the built form and hard stand impacts of development whilst providing areas of natural space on a site.

Building height

PO5

The height of buildings is in keeping with the predominant marine industrial character of the precinct and does not cause adverse amenity impacts on sensitive land uses and zones.

Building height does not exceed the maximum height identified on Overlay map - Building heights.

Setbacks

PO6	A06
Street boundary setbacks:	Buildings maintain a minimum setback of :
a. minimise building bulk and visual dominance from the street;	a. 6m to the street frontage (other than the Bruce Highway);
b. provide areas for landscaping at the front of the site;	b. 3m to the secondary street frontage;
c. allow for customer parking to be located at the front of the building.	c. 10m to a boundary adjoining the Bruce Highway.
P07	A07
Building setbacks allow access to the waterway and do not compromise future marine industries and port services from accessing the waters edge.	Buildings are setback 4m from the waters edge, measured from the top edge of bank.
PO8	A08
Side and rear boundary setbacks maintain views, privacy, access to natural light and the visual amenity of adjoining sensitive land uses.	Where a development adjoins general residential zoned land, the building is setback a minimum of 3m from the property boundary with dense landscaping installed along the boundary to provide screening of the development with a mature height of at least 3m.
	Note - Refer to Planning scheme policy - Integrated design for determining acceptable levels of landscaping for screening purposes.

AO5

Building appearance and design	
PO9	No acceptable outcome provided.
Buildings on highly visible sites incorporate a high standard of industrial design and construction, which adds visual interest to the streetscape and reduces the perceived bulk of the building from the street.	
Staff recreation	
PO10	A010
Staff are provided with adequate and amendable break/dining facilities to suit the nature of the activities on-site.	Where the nature of the activities on-site do not allow staff to eat in their work environment, the development provides an on-site recreation area for staff that:
	a. Includes adequate seating, tables and rubbish bins for the number of staff on-site;
	b. is adequately protected from the weather;c. is safely accessible to all staff;
	d. is separate and private from public areas;
	e. is located away from a noisy or odorous activity.
Landscaping	C C
PO11 Landscaping is provided to: a. visually soften the built form, areas of hardstand, storage areas and mechanical plant associated with	A011 Landscaping is provided and maintained in accordance with Planning scheme policy - Integrated design.
b. complement the existing or desired streetscape;	
c. minimise the impact of industrial development on adjoining lots not zoned for industrial purposes.	
Fencing	
P012	A012
The provision of fencing on street frontages does not dominate the street or create safety issues. Note - The following example illustrates an acceptable design response to this outcome.	Where fencing is provided on the street frontage, fence sections between columns or posts have a minimum transparency of 70% spread evenly across its total surface area.

Public access

Drive

PO13

The use has safe, clearly identifiable public access separated from service and parking areas.

Note - The following example illustrates an acceptable design response to this outcome.

Industrial Activity.

AO13.1

Pedestrian linkages are provided from the street and customer car parking areas directly to the main entrance of the building.

AO13.2

The public access is separated from industrial service areas.

Car parking	
P014	A014
Car parking is provided on-site to meet the anticipated demand for employees and visitors and avoid adverse impacts on the external road network. Note - Refer to Planning scheme policy - Integrated transport assessment for guidance on how to achieve compliance with this outcome.	Car parking is provided in accordance with Schedule 7 - Car parking.

PO1	5	AO15
The a.	design of car parking areas: does not impact on the safety of the external road	All car parking areas are designed and constructed in accordance with Australian Standard AS2890.1.
b.	network; ensures the safety of pedestrians at all times;	
C.	ensures the safe movement of vehicles within the site.	
Note	 cle parking and end of trip facilities e - Building work to which this code applies constitutes Major Development Code MP 4.1. 	elopment for purposes of development requirements for end of trip
	•	S
PO1 a.	6 End of trip facilities are provided for employees or occupants, in the building or on-site within a reasonable walking distance, and include:	AO16.1 Minimum bicycle parking facilities are provided at a rate of 1 bicycle parking space for every 3 vehicles parking spaces required by Schedule 7 – Car parking.
	 i. adequate bicycle parking and storage facilities; and ii. adequate provision for securing belongings; and iii. change rooms that include adequate showers, sanitary compartments, wash basins and 	Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is a combination of the default levels set for end of trip facilities in the Queensland Development Code and the additional facilities required by Council.
b.	mirrors. Notwithstanding a. there is no requirement to provide end of trip facilities if it would be	AO16.2 Bicycle parking is: a. provided in accordance with <i>Austroads (2008),</i>
	 unreasonable to provide these facilities having regard to: i. the projected population growth and forward planning for road upgrading and development of cycle paths; or 	 Guide to Traffic Management - Part 11: Parking; b. protected from the weather by its location or a dedicated roof structure; c. located within the building or in a dedicated, secure
	ii. whether it would be practical to commute to and from the building on a bicycle, having regard to the likely commute distances and nature of the terrain; or	 d. adjacent to building entrances or in public areas fo customers and visitors.
	iii. the condition of the road and the nature and amount of traffic potentially affecting the safety of commuters.	Note - Bicycle parking structures are to be constructed to the standards prescribed in AS2890.3.
for b unre shou	or's note - The intent of b above is to ensure the requirements bicycle parking and end of trip facilities are not applied in easonable circumstances. For example these requirements ald not, and do not apply in the Rural zone or the Rural residential e etc.	Note - Bicycle parking and end of trip facilities provided for residential and non-residential activities may be pooled, provided they are within 100 metres of the entrance to the building. Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable

Editor's note - This performance outcome is the same as the Performance Requirement prescribed for end of trip facilities under the Queensland Development Code. For development incorporating building work, that Queensland Development Code performance requirement cannot be altered by a local planning instrument and has been reproduced here solely for information purposes. Council's assessment in its building work concurrence agency role for end of trip facilities will be against the performance requirement in the Queensland Development Code. As it is subject to change at any time, applicants for development incorporating building work should ensure that proposals that do not comply with the acceptable outcomes under this heading meet the current performance requirement prescribed in the Queensland Development Code.	outcome facilities facilities AO16.3 For nor a. ar sp
ic channing	b. ha 30 Note - S activities within 5 Editor's prescrib planning levels ic outcome facilities AO16.4 For nor a. ar fro C. ar C. ar fro C. ar C.

is an amalgamation of the default levels set for end of trip in the Queensland Development Code and the additional required by Council.

-residential uses, storage lockers:

- e provide at a rate of 1.6 per bicycle parking ace (rounded up to the nearest whole number);
- ve minimum dimensions of 900mm (height) x 0mm (width) x 450mm (depth).

torage lockers may be pooled across multiple sites and when within 100 metres of the entrance to the building and) metres of bicycle parking and storage facilities.

note - The acceptable solutions for end of trip facilities ed under the Queensland Development Code permit a local instrument to prescribe facility levels higher than the default entified in those acceptable solutions. This acceptable is an amalgamation of the default levels set for end of trip in the Queensland Development Code and the additional required by Council.

-residential uses, changing rooms:

- e provided at a rate of 1 per 10 bicycle parking aces:
- e fitted with a lockable door or otherwise screened om public view;
- e provided with shower(s), sanitary mpartment(s) and wash basin(s) in accordance th the table below:

Bicycle spaces provided	Male/ Female	Change rooms required	Showers required	Sanitary compartments required	Washbasins required
1-5	Male and female	1 unisex change room	1	1 closet pan	1
6-19	Female	1	1	1 closet pan	1
20 or more	Male	1	1	1 closet pan	1
	Female	1	2, plus 1 for every 20 bicycle spaces provided thereafter	2 closet pans, plus 1 sanitary compartment for every 60 bicycle parking spaces provided thereafter	1, plus 1 for every 60 bicycle parking spaces provided thereafter
	Male	1	2, plus 1 for every 20 bicycle spaces provided thereafter	1 urinal and 1 closet pans, plus 1 sanitary compartment at the rate of 1 closet pan or 1 urinal for every 60 bicycle space provided thereafter	1, plus 1 for every 60 bicycle parking spaces provided thereafter

	Note - All showers have a minimum 3-star Water Efficiency Labelling and Standards (WELS) rating shower head. Note - All sanitary compartments are constructed in compliance with
	F2.3 (e) and F2.5 of BCA (Volume 1).
Loading and servicing PO17 Service areas, including loading/unloading facilities, plant areas and outdoor storage areas, are screened from the direct view from land not included in the Industry zone and sub-arterial and arterial roads.	 F2.3 (e) and F2.5 of BCA (Volume 1). d. are provided with: a mirror located above each wash basin; a hook and bench seating within each shower compartment; a socket-outlet located adjacent to each wash basin. Note - Change rooms may be pooled across multiple sites, residential and non-residential activities when within 100 metres of the entrance to the building and within 50 metres of bicycle parking and storage facilities Editor's note - The acceptable solutions for end of trip facilities prescribed under the Queensland Development Code permit a local planning instrument to prescribe facility levels higher than the default levels identified in those acceptable solutions. This acceptable outcome is an amalgamation of the default levels set for end of trip facilities required by Council.
Note - If landscaping is proposed for screening purposes, refer to Planning scheme policy - Integrated design for determining acceptable levels.	
Waste	
PO18 Bins and bin storage area/s are provided, designed and managed in accordance with Planning scheme policy – Waste.	No acceptable outcome provided.
Environmental impacts	
PO19	AO19
Where a use is not an environmentally relevant activity under the Environmental Protection Act, the release of any containment that may cause environmental harm is mitigated to an acceptable level.	Development achieves the standard listed in Schedule 1 Air Quality Objectives, Environmental Protection (Air) Policy 2008.

PO20	AO20.1
Development does not adversely impact surrounding ecological system features, including:	The development does not discharge pollutants into adjacent waterways.
 a. Water quality; b. Air quality; c. Soil quality; d. Disturbance to marine habitat. 	AO20.2 The development does not cause an environmental nuisance or harm to marine habitat.
	AO20.3 Where involving a marina, the development is capable of providing sewer facilities for the disposal of sewage, liquid waste and contaminated bilge water.
Lighting	
P021	A021
Lighting is directed and shielded to not cause unreasonable disturbance to any person on adjoining land.	Artificial lighting on-site is directed and shielded in such a manner as not to exceed the recommended maximum values of light technical parameters for the control of obtrusive light given in Table 2.1 of Australian Standard AS 4282 (1997) Control of Obtrusive Effects of Outdoor Lighting.
	Note - "Curfewed hours" are taken to be those hours between 10pm and 7am on the following day
Noise	
P022	No acceptable outcome provided.
Noise generating uses do not adversely affect existing noise sensitive uses. Note - The use of walls, barriers or fences that are visible from or adjoin a road or public area are not appropriate noise attenuation measures unless adjoining a motorway, arterial road or rail line.	
Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.	
P023	AO23.1
Sensitive land uses are provided with an appropriate acoustic environment within designated external private outdoor living spaces and internal areas while:	Development is designed to meet the criteria outlined in the Planning Scheme Policy – Noise.
a. contributing to safe and usable public spaces,	A023.2
through maintaining high levels of surveillance of parks, streets and roads that serve active transport	Noise attenuation structures (e.g. walls, barriers or fences):

purposes (e.g. existing or future pedestrian paths or cycle lanes etc);	a. are not visible from an adjoining road or public area unless:
b. maintaining the amenity of the streetscape.	i adicipina o motorway or roll line; or
Note - A noise impact assessment may be required to demonstrate compliance with this PO. Noise impact assessments are to be prepared in accordance with Planning scheme policy - Noise.	 adjoining a motorway or rail line; or adjoining part of an arterial road that does not serve an existing or future active transport purpose (e.g. pedestrian paths or cycle lanes) or where attenuation through building location
Note - Refer to Planning Scheme Policy – Integrated design for	and materials is not possible.
details and examples of noise attenuation structures.	 b. do not remove existing or prevent future active transport routes or connections to the street network; c. are located, constructed and landscaped in accordance with Planning scheme policy - Integrated design.
	Note - Refer to Planning scheme policy – Integrated design for details and examples of noise attenuation structures. Note - Refer to Overlay map – Active transport for future active
	transport routes.
Emissions into Brisbane operational airspace	
PO24	A024.1
Emissions do not significantly increase air turbulence, reduce visibility or compromise the operation of aircraft engines in Brisbane airport's operational airspace.	Development does not emit a gaseous plume into the airport's operational airspace at a velocity exceeding 4.3m per second.
Note - Refer to State Planning Policy December 2013 mapping to identify Brisbane airport's operational airspace.	A024.2
	Development emitting smoke, dust, ash, steam or a gaseous plume exceeding 4.3m per second is designed and constructed to mitigate adverse impacts of emissions upon operational airspace.
Hazardous Chemicals	
Note - To assist in demonstrating compliance with the following perform be prepared and submitted by a suitably qualified person in accordant involving hazardous chemicals'.	
Terms used in this section are defined in State 'State Planning Policy	Guideline - Guidance on development involving hazardous chemicals'.
PO25	AO25.1

Off sites risks from foreseeable hazard scenarios involving hazardous chemicals are commensurate with the sensitivity of the surrounding land use zones.	Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of land zoned for vulnerable or sensitive land uses as described below:
	Dangerous Dose

a.	For any hazard scenario involving the release of
	gases or vapours:

- i. AEGL2 (60minutes) or if not available ERPG2;
- ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO21.1 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 0.5×10 -6/year.

AO25.2

a.

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of a commercial or community activity land use zone as described below:

Dangerous Dose

- For any hazard scenario involving the release of gases or vapours:
 - i. AEGL2 (60minutes) or if not available ERPG2;
 - ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
- b. For any hazard scenario involving fire or explosion:
 - i. 7kPa overpressure;
 - ii. 4.7kW/m2 heat radiation.

If criteria AO21.2 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 5 x 10-6/year.

AO25.3

Off site impacts or risks from any foreseeable hazard scenario does not exceed the dangerous dose at the boundary of an industrial land use zone as described below:

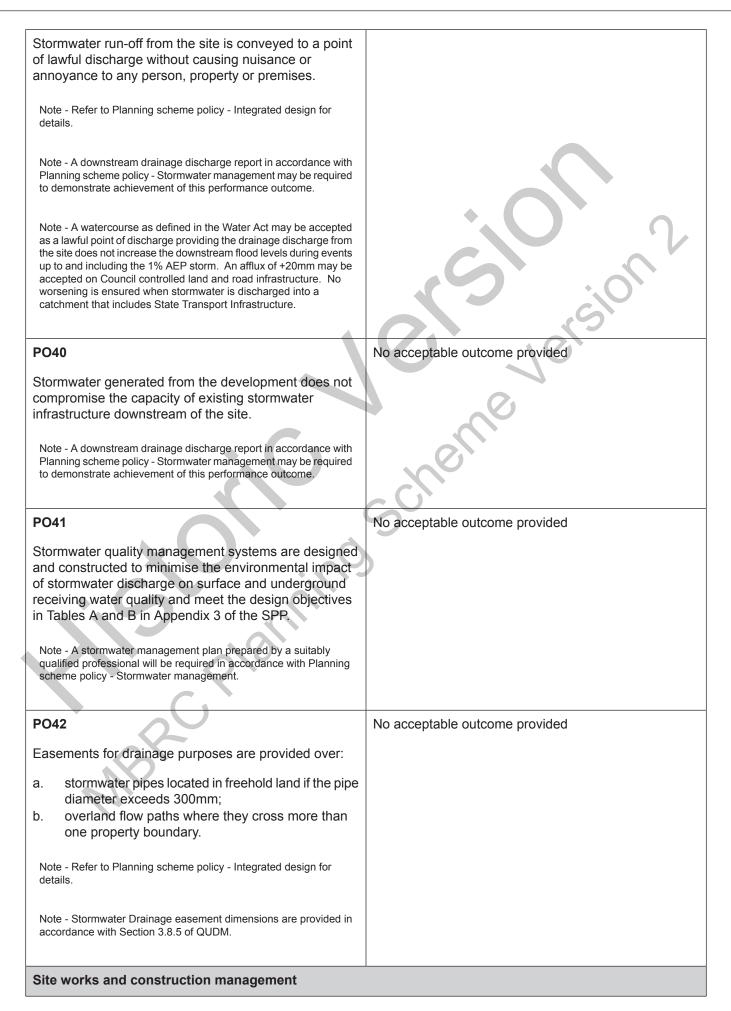

Dangerous Dose

	a. For any hazard scenario involving the release of
	gases or vapours:
	i. AEGL2 (60minutes) or if not available ERPG2;
	ii. An oxygen content in air <19.5% or >23.5% at normal atmospheric pressure.
	b. For any hazard scenario involving fire or explosion:
	i. 14kPa overpressure;
	ii. 12.6kW/m2 heat radiation.
	If criteria AO21.3 (a) or (b) cannot be achieved, then the risk of any foreseeable hazard scenario shall not exceed an individual fatality risk level of 50 x 10-6/year.
Poac	
PO26 Buildings and package stores containing fire-risk	AO26 Buildings and package stores containing fire-risk
hazardous chemicals are designed to detect the early stages of a fire situation and notify a designated person.	hazardous chemicals are provided with 24 hour monitored fire detection system for early detection of a fire event.
P027	A027
Common storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) that are adequate to contain releases, including fire fighting media.	Storage areas containing packages of flammable and toxic hazardous chemicals are designed with spill containment system(s) capable of containing a minimum of the total aggregate capacity of all packages plus the maximum operating capacity of any fire protection system for the storage area(s) over a minimum of 60 minutes.
P028	AO28.1
Storage and handling areas, including manufacturing areas, containing hazardous chemicals in quantities greater than 2,500L or kg within a Local Government	The base of any tank with a WC >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively:
"flood hazard area" are located and designed in a manner to minimise the likelihood of inundation of flood waters from creeks, rivers, lakes or estuaries.	 a. bulk tanks are anchored so they cannot float if submerged or inundated by water; and
NBI	 tank openings not provided with a liquid tight seal, i.e. an atmospheric vent, are extended above the relevant flood height level.
	AO28.2
	The lowest point of any storage area for packages >2,500L or kg is higher than any relevant flood height level identified in an area's flood hazard area. Alternatively, package stores are provided with impervious bund walls or racking systems higher than the relevant flood height level.

PO	29	No acceptable outcome provided
a.	Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	
b.	Development does not result in the net loss of fauna habitat. Where development does result in the loss of a habitat tree, development will provide replacement fauna nesting boxes at the following rate of 1 nest box for every hollow removed. Where hollows have not yet formed in trees > 80cm in diameter at 1.3m height, 3 nest boxes are required for every habitat tree removed.	
C.	Development does not result in soil erosion or land degradation or leave land exposed for an unreasonable period of time but is rehabilitated in a timely manner	C Jersie
	te: Further guidance on habitat trees is provided in Planning neme policy - Environmental areas	ne

of s	e development provides for the treatment and disposal sewage and other waste water in a way that will not use environmental harm or pose a risk to public health.	Where in a sewered area, the development is connected to a reticulated sewerage network.
	6.	AO32.2
		Trade waste is pre-treated on-site prior to discharging into the sewerage network.
PO	33	AO33
	e development is provided with an adequate and	Where in an existing connections area or a future

[1
	South East Queensland Water Supply and Sewerage Design and Construction Code and the relevant Water Service Association of Australia (WSAA) codes and standards.
PO34	No acceptable outcome provided
The development is provided with constructed and dedicated road access.	
Access	
PO35	No acceptable outcome provided
Where required, access easements contain a driveway and provision for services appropriate to the use. The easement covers all works associated with the access in accordance with Planning scheme policy - Integrated design.	ersion.
PO36	AO36.1
The layout of the development does not compromise:a. the development of the road network in the area;b. the function or safety of the road network;c. the capacity of the road network.	The development provides for the extension of the road network in the area in accordance with Council's road network planning.
Note - The road hierarchy is mapped on Overlay map - Road hierarchy.	The development does not compromise future road widening of frontage roads in accordance with the relevant standard and Council's road planning.
	AO36.3 The lot layout allows forward access to and from the site.
P037	AO37.1
fe access is provided for all vehicles required to access a site.	Site access and driveways are designed and located in accordance with:
	 a. Where for a Council-controlled road, AS/NZS2890.1 section 3; or b. Where for a State-Controlled road, the Safe Intersection Sight Distance requirements in AustRoads and the appropriate IPWEAQ standard drawings, or a copy of a Transport Infrastructure Act 1994, section 62 approval.
	A037.2
	Internal driveways and access ways are designed and constructed in accordance with AS/NZS2890.1 Parking Facilities – Off street car parking and the relevant standards in Planning scheme policy - Integrated design.

 PO38 Upgrade works (whether trunk or non-trunk) are provided where necessary to: a. ensure the type or volume of traffic generated by the development does not have a negative impact on the external road network; b. ensure the orderly and efficient continuation of the active transport network; c. ensure the site frontage is constructed to a suitable urban standard generally in accordance with Planning scheme policy - Integrated design. Note - An Integrated Transport Assessment (ITA) may be required to demonstrate compliance with this performance outcome refer to Planning scheme policy - Integrated transport assessment for guidance on when an ITA is required. An ITA should be prepared 	Note - This includes queue lengths (refer to Schedule 8 Service vehicle requirements), pavement widths and construction. AO37.3 Access driveways, manoeuvring areas and loading facilities provide for service vehicles listed in Schedule 8 Service vehicle requirements for the relevant use. The on-site manoeuvring is to be in accordance with Schedule 8 Service vehicle requirements. No acceptable outcome provided
 in accordance with Planning scheme policy - Integrated transport assessment. Note - The road network is mapped on Overlay map - Road hierarchy. Note - The primary and secondary active transport network is mapped on Overlay map - Active transport network is mapped on Overlay map - Active transport. Note - To demonstrate compliance with c. of this performance outcome, site frontage works where in existing road reserve (non-trunk) are to be designed and constructed as follows: i. Where the street is partially established to an urban standard, match the alignment of existing kerb and channel and provide carriageway widening and underground drainage where required; or ii. Where the street is not established to an urban standard, prepare a design that demonstrates how the relevant features 	
of the particular road as shown in the Planning scheme policy - Integrated Design can be achieved in the existing reserve. Note - Refer to Planning scheme policy - Integrated design for road network and active transport network design standards. Stormwater PO39	No acceptable outcome provided

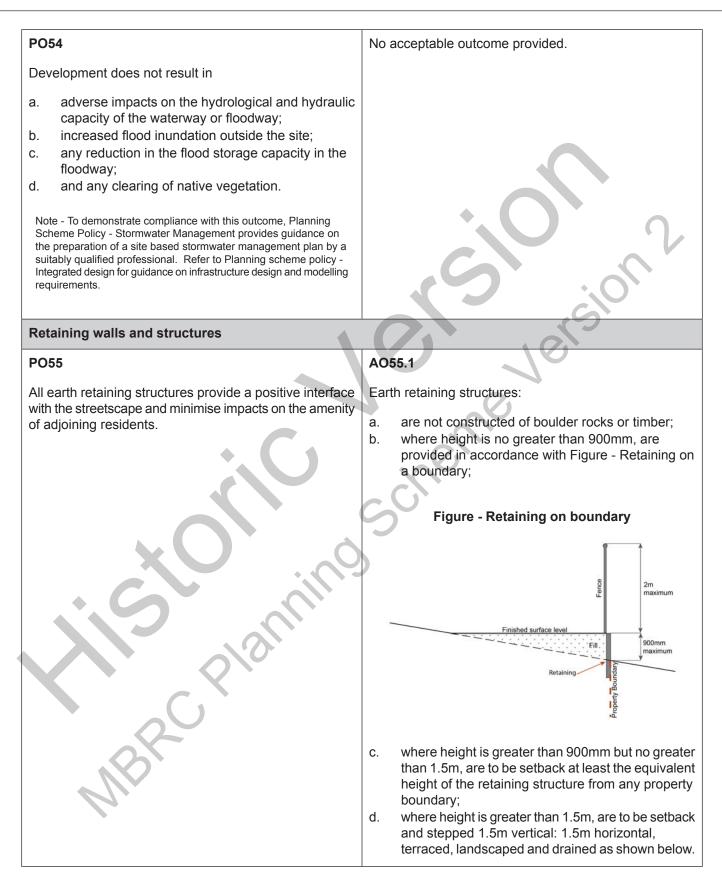

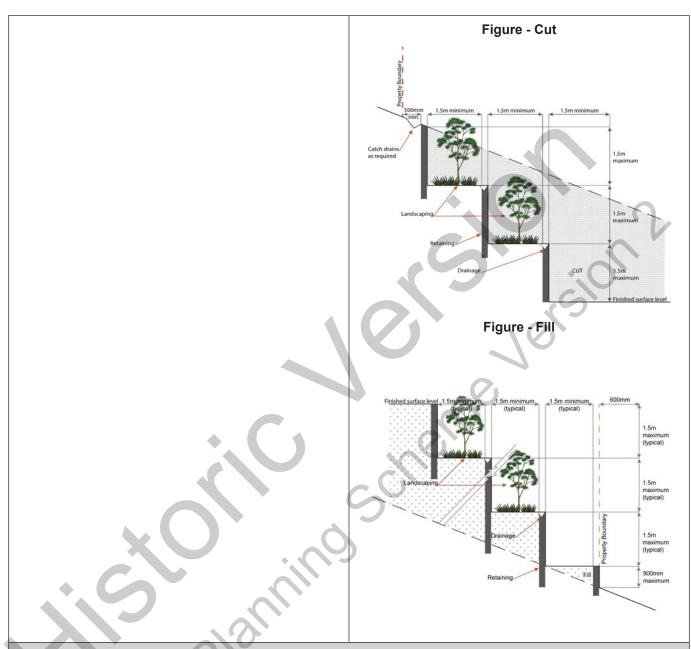

PO43	No acceptable outcome provided
The site and any existing structures are maintained in a tidy and safe condition.	
PO44	AO44.1
 All works on-site are managed to: a. minimise as far as practicable, impacts on adjoining or adjacent premises and the streetscape in regard to erosion and sedimentation, dust, noise, safety and light; b. minimise as far as possible, impacts on the natural environment; c. ensure stormwater discharge is managed in a manner that does not cause nuisance or annoyance to any person or premises; d. avoid adverse impacts on street trees and their critical root zone. 	 Works incorporate temporary stormwater runoff, erosion and sediment controls and trash traps designed in accordance with the Urban Stormwater Quality Planning Guidelines, Planning scheme policy - Stormwater management and Planning scheme policy - Integrated design, including but not limited to the following: a. stormwater is not discharged to adjacent properties in a manner that differs significantly from pre-existing conditions; b. stormwater discharged to adjoining and downstream properties does not cause scour and erosion; c. stormwater discharge rates do not exceed pre-existing conditions; d. the 10% AEP storm event is the minimum design storm for all temporary diversion drains; and e. the 50% AEP storm event is the minimum design storm for all silt barriers and sediment controls are constructed prior to commencement of any clearing or earthworks and are maintained and adjusted as necessary at all times to ensure their ongoing effectiveness. Note - The measures are adjusted on-site to maximise their effectiveness. AO44.3 The completed earthworks area is stabilised using turf, established grass seeding, mulch or sprayed stabilisation techniques to control erosion and sediment and dust from leaving the property.
PO45	AO45
	No dust emissions extend beyond the boundaries of the site during soil disturbances and construction works.

Dust suppression measures are implemented during soil disturbances and construction works to protect nearby premises from unreasonable dust impacts.	
PO46	AO46.1
All works on-site and the transportation of material to and from the site are managed to not negatively impact the existing road network, the amenity of the surrounding area or the streetscape. Note - Where the amount of imported or exported material is greater than 50m ³ , a haulage route must be identified and approved by Council.	Construction traffic including contractor car parking is controlled in accordance with a traffic management plan, prepared in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) to ensure all traffic movements to and from the site are safe. AO46.2 All contractor car parking is either provided on the development site, or on an alternative site in the general locality which has been set aside for car parking. Contractors vehicles are generally not to be parked in existing roads. Note - A Traffic Management Plan may be required for the site in accordance with the Manual of Uniform Traffic Control Devices (MUTCD). AO46.3 Any material dropped, deposited or spilled on the road(s) as a result of construction processes associated with the site are to be cleaned at all times.
P047	AO47
All disturbed areas are rehabilitated at the completion of construction.	At completion of construction all disturbed areas of the site are to be:
Note - Refer to Planning scheme policy - Integrated design for details.	a. topsoiled with a minimum compacted thickness of fifty (50) millimetres;b. grassed.
RC	Note - These areas are to be maintained during any maintenance period to maximise grass coverage from grass seeding of these areas.
PO48	AO48.1
The clearing of vegetation on-site:	All native vegetation to be retained on-site is temporarily
a. is limited to the area of infrastructure works, building areas and other necessary areas for the works; and	fenced or protected prior to and during development works.
b. includes the removal of declared weeds and other materials which are detrimental to the intended use of the land;	Note - No parking of vehicles of storage of machinery or goods is to occur in these areas during development works.
 c. is disposed of in a manner which minimises nuisance and annoyance to existing premises. 	AO48.2
Note - No burning of cleared vegetation is permitted.	Disposal of materials is managed in one or more of the following ways:

	 a. all cleared vegetation, declared weeds, stumps, rubbish, car bodies, scrap metal and the like are removed and disposed of in a Council land fill facility; or b. all native vegetation with a diameter below 400mm is to be chipped and stored on-site. Note - The chipped vegetation must be stored in an approved location, preferably a park or public land.
PO49 Any alteration or relocation in connection with or arising from the development to any service, installation, plant, equipment or other item belonging to or under the control of the telecommunications authority, electricity authorities, the Council or other person engaged in the provision of public utility services is to be carried with the development and at no cost to Council.	No acceptable outcome provided
Earthworks	
O50 n-site earthworks are designed to consider the visual ad amenity impact as they relate to: the natural topographical features of the site; short and long-term slope stability; soft or compressible foundation soils; reactive soils; low density or potentially collapsing soils; existing fill and soil contamination that may exist on-site; the stability and maintenance of steep rock slopes and batters; excavation (cut) and fill and impacts on the amenity of adjoining lots (e.g. residential). Note - Filling or excavation works are to be completed within six nonths of the commencement date.	 AO50.1 All cut and fill batters are provided with appropriate scour, erosion protection and run-off control measures including catch drains at the top of batters and lined batter drains as necessary. AO50.2 Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance of steep rock slopes and batters. AO50.3 Inspection and certification of steep rock slopes and batters is required by a suitably qualified and experienced RPEQ. AO50.4 AII fill placed on-site is: a. limited to that required for the necessary approved use; b. clean and uncontaminated (i.e. no building waste, concrete, green waste or contaminated material etc. is used as fill).

	AO50.6
	The site is prepared and the fill placed on-site in accordance with AS3798.
	Note - The fill is to be inspected and tested in accordance with Planning scheme policy - Operational works inspection, maintenance and bonding procedures.
PO51	A051
Embankments are stepped, terraced and landscaped to not adversely impact on the visual amenity of the	Any embankments more than 1.5 metres in height are stepped, terraced and landscaped.
surrounding area.	Figure - Embankment
PO52	AO52.1
 Filling or excavation is undertaken in a manner that: a. does not adversely impact on a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land; b. does not preclude reasonable access to a Council or public sector entity maintained infrastructure or any drainage feature on, or adjacent to the land for monitoring, maintenance or replacement purposes. Note - Public sector entity as defined in the Sustainable Planning Act 2009. 	 No filling or excavation is undertaken in an easement issued in favour of Council or a public sector entity. Note - Public sector entity as defined in the Sustainable Planning Act 2009. AO52.2 Filling or excavation that would result in any of the following is not carried out on-site: a. a reduction in cover over any Council or public sector entity infrastructure service to less than 600mm; b. an increase in finished surface grade over, or within 1.5m on each side of, the Council or public sector entity infrastructure above that which existed prior to the earthworks being undertaken. Note - Public sector entity as defined in the Sustainable Planning Act 2009.
PO53	No acceptable outcome provided
Filling or excavation does not result in land instability.	
Note - Steep rock slopes and batters are inspected and certified for long-term stability by a suitably qualified and experienced geotechnical engineer with RPEQ qualifications. Stabilisation measures are provided, as necessary, to ensure long-term stability and low maintenance.	

Fire Services

Note - The provisions under this heading only apply if:

- the development is for, or incorporates: а.
 - reconfiguring a lot for a community title scheme creating 1 or more vacant lots; or i.
 - material change of use for 2 or more sole control park ⁽⁸⁴⁾ with accommodation in the form of caravans or tents; or material change of use for a Tourist park ⁽⁸⁴⁾, with accommodation in the form of caravans or tents; or material change of use for outdoor sales ⁽⁵⁴⁾, outdoor processing or outdoor storage where involving combustible materials. ii. iii.
 - iv.

AND

none of the following exceptions apply: b

- the distributor-retailer for the area has indicated, in its netserv plan, that the premises will not be served by that entity's reticulated i. water supply; or
- ii. every part of the development site is within 60m walking distance of an existing fire hydrant on the distributor-retailer's reticulated water supply network, measured around all obstructions, either on or adjacent to the site.

Note - The provisions under this heading do not apply to buildings that are required by the Building Code of Australia to have a fire hydrant system complying with Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations or other fire fighting facilities which provide equivalent protection.

PO56

Development incorporates a fire fighting system that:

- a. satisfies the reasonable needs of the fire fighting entity for the area;
- b. is appropriate for the size, shape and topography of the development and its surrounds;
- c. is compatible with the operational equipment available to the fire fighting entity for the area;
- d. considers the fire hazard inherent in the materials comprising the development and their proximity to one another;
- e. considers the fire hazard inherent in the surrounds to the development site;
- f. is maintained in effective operating order.

Note - The Queensland Fire and Emergency Services is the entity currently providing the fire fighting function for the urban areas of the Moreton Bay Region.

AO56.1

External fire hydrant facilities are provided on site to the standard prescribed under the relevant parts of *Australian Standard AS 2419.1 (2005) – Fire Hydrant Installations.*

Note - For this acceptable outcome, the following are the relevant parts of AS 2419.1 (2005) that may be applicable:

- a. in regard to the form of any fire hydrant Part 8.5 and Part 3.2.2.1, with the exception that for Tourist parks ⁽⁸⁴⁾ or development comprised solely of dwellings and their associated outbuildings, single outlet above-ground hydrants or suitably signposted in-ground hydrants would be an acceptable alternative;
 - in regard to the general locational requirements for fire hydrants Part 3.2.2.2 (a), (e), (f), (g) and (h) as well as Appendix B of AS 2419.1 (2005);
- c. in regard to the proximity of hydrants to buildings and other facilities Part 3.2.2.2 (b), (c) and (d), with the exception that:
 - for dwellings and their associated outbuildings, hydrant coverage need only extend to the roof and external walls of those buildings;
 - for caravans and tents, hydrant coverage need only extend to the roof of those tents and caravans; for outdoor sales⁽⁵⁴⁾, processing or storage facilities,
 - hydrant coverage is required across the entire area of the outdoor sales⁽⁵⁴⁾, outdoor processing and outdoor storage facilities;
- d. in regard to fire hydrant accessibility and clearance requirements Part 3.5 and, where applicable, Part 3.6.

AO56.2

A continuous path of travel having the following characteristics is provided between the vehicle access point to the site and each external fire hydrant and hydrant booster point on the land:

- a. an unobstructed width of no less than 3.5m;
- b. an unobstructed height of no less than 4.8m;
- c. constructed to be readily traversed by a 17 tonne HRV fire brigade pumping appliance;
- d. an area for a fire brigade pumping appliance to stand within 20m of each fire hydrant and 8m of each hydrant booster point.

AO56.3

On-site fire hydrant facilities are maintained in effective operating order in a manner prescribed in *Australian Standard AS1851 (2012) – Routine service of fire protection systems and equipment.*

	protection systems and equipment.
PO57	AO57

On-site fire hydrants that are external to buildings, as well as the available fire fighting appliance access routes	For development that contains on-site fire hydrants external to buildings:	
to those hydrants, can be readily identified at all times from, or at, the vehicular entry point to the development site.	a. those external hydrants can be seen from the vehicular entry point to the site; or	
	b. a sign identifying the following is provided at the vehicular entry point to the site:	
	i. the overall layout of the development (to scale);	
	ii. internal road names (where used);	
	iii. all communal facilities (where provided);	
	iv. the reception area and on-site manager's office (where provided);	
	v. external hydrants and hydrant booster points;	
	vi. physical constraints within the internal roadway system which would restrict access	
	by fire fighting appliances to external hydrants and hydrant booster points.	
+. C1		
	Note - The sign prescribed above, and the graphics used are to be:	
	a. in a form;b. of a size;	
×O o	c. illuminated to a level;	
	which allows the information on the sign to be readily understood,	
	at all times, by a person in a fire fighting appliance up to 4.5m from the sign.	
P058	AO58	
Each on-site fire hydrant that is external to a building is signposted in a way that enables it to be readily identified	For development that contains on-site fire hydrants external to buildings, those hydrants are identified by	
at all times by the occupants of any firefighting appliance traversing the development site.	way of marker posts and raised reflective pavement markers in the manner prescribed in the technical note	
	<i>Fire hydrant indication system</i> produced by the Queensland Department of Transport and Main Roads.	
	Note - Technical note Fire hydrant indication system is available on the website of the Queensland Department of Transport and Main Roads.	
Use speci	fic criteria	
Industrial land uses		
PO59	AO59	

Ancillary office, administration functions, retail sales and customer service components do not compromise the primary use of the site or marine activities in the precinct.		The combined area of ancillary non-industrial activities, including but not limited to administration and retail functions, does not exceed 10% of the GFA or 200m ² , whichever is the lesser.
PO60		No acceptable outcome provided.
Buildings directly adjoining non-industrial zoned land:		
a.	are compatible with the character of the adjoining areas;	
b.	minimise overlooking and overshadowing;	
C.	maintain privacy;	
d.	do not cause significant loss of amenity to neighbouring residents by way of noise, vibration, odour, lighting, traffic generation and hours of operation.	C Jersio
POe	51	No acceptable outcome provided.
	lium impact industry ⁽⁴⁷⁾ uses only establish in the cinct where:	
a.	not constraining the function or viability of existing or future uses in the precinct;	- Clo
b.	not adversely affecting the amenity, health or safety of employees and visitors of the surrounding uses;	5
C.	not adversely affecting the amenity, health or safety of nearby sensitive land uses.	
Note - Separation distances are to be measured in a straight line, in accordance with the State policy.		
PO		No acceptable outcome provided.
PO62 Non-industrial components of buildings (including offices and retail areas) are designed as high quality architectural features and incorporate entry area elements such as forecourts, awnings and the architectural treatment of roof lines and fascias.		
Non-industrial uses		
POe	33	No acceptable outcome provided.
and to as qua elen	-industrial components of buildings (including offices retail areas) are to be located at the road frontage ssist in activating the frontage and designed as high lity architectural features incorporating entry area nents such as forecourts, awnings and the nitectural treatment of roof lines and fascias.	

PO64	No acceptable outcome provided.
With the exception of Caretaker's accommodation ⁽¹⁰⁾ , residential and other sensitive land uses do not establish within the precinct.	
PO65	No acceptable outcome provided.
Non-industrial uses:	
a. are consolidated with existing non-industrial uses in the precinct;	
 b. do not compromise the viability, role or function of the region's centres network; 	
c. are not subject to adverse amenity impacts or risk to health from industrial activities;	is is
d. do not constrain the function of viability of existing of future industrial activities in the surrounding area.	V Jer
Note - The submission of a Hazard and Nuisance Mitigation Plan may be required to justify compliance with this outcome.	
Note - An Economic Impact Assessment may be required to demonstrate compliance with part of the outcome/s above. Refer to Planning scheme policy - Economic impact assessment for information required.	ccher
	5
PO66	No acceptable outcome provided.
Traffic generated by non-industrial uses does not detrimentally impact the operation and functionality of the external road network.	
P067	No acceptable outcome provided.
The design of non-industrial buildings in the precinct:	
a. adds visual interest to the streetscape (e.g. variation in materials, patterns, textures and colours, a consistent building line, blank walls that are visible from public places are treated to not negatively impact the surrounding amenity);	
 contributes to a safe environment (e.g. through the use of lighting and not resulting in concealed recesses or potential entrapment areas); 	
c. incorporates architectural features within the building facade at the street level to create human scale (e.g. awnings).	
PO68	AO68.1

Buil a.	ding entrances: are readily identifiable from the road frontage;	The main entrance to the building is clearly visible from and addresses the primary street frontage.
b.	add visual interest to the streetscape;	AO68.2
		Where the building does not adjoin the street frontage,
c. d.	are designed to limit opportunities for concealment; are located and oriented to favour active and public transport usage by connecting to pedestrian footpaths on the street frontage and adjoining sites.	a dedicated and sealed pedestrian footpath is provided between the street frontage and the building entrance.
sch con	te - The design provisions for footpaths outlined in Planning neme policy - Integrated design may assist in demonstrating npliance with this outcome.	
Car	etaker's accommodation ⁽¹⁰⁾	0
PO	69	AO69
Dev	velopment of Caretaker's accommodation ⁽¹⁰⁾ :	Caretaker's accommodation ⁽¹⁰⁾ :
a.	does not compromise the productivity of the use occurring on-site and in the surrounding area;	 a. has a maximum GFA is 80m²; b. does not gain access from a separate driveway to
b.	is domestic in scale;	that of the industrial use;
C.	provides adequate car parking provisions exclusive on the primary use of the site;	c. provides a minimum 16m ² of private open space directly accessible from a habitable room;
d.	is safe for the residents;	d. provides car parking in accordance with Schedule 7 - Car parking.
e.	has regard to the open space and recreation needs of the residents.

Telecommunications facilities ⁽⁸¹⁾ do not conflict with lawful existing land uses both on and adjoining the site.	The development results in no net reduction in the minimum quantity and standard of landscaping, private or communal open space or car parking spaces required under the planning scheme or under an existing development approval.
P077 The Telecommunications facility ⁽⁸¹⁾ does not have an adverse impact on the visual amenity of a locality and is: a. high quality design and construction; b. visually integrated with the surrounding area; c. not visually dominant or intrusive; d. located behind the main building line; e. below the level of the predominant tree canopy or the level of the surrounding buildings and structures; f. camouflaged through the use of colours and materials which blend into the landscape; g. treated to eliminate glare and reflectivity; h. landscaped; i. otherwise consistent with the amenity and character of the zone and surrounding area.	AO77.1 Where in an urban area, the development does not protrude more than 5m above the level of the existing treeline, prominent ridgeline or building rooftops in the surrounding townscape. AO77.2 In all other areas towers do not exceed 35m in height. AO77.3 Towers, equipment shelters and associated structures are of a design, colour and material to: a. reduce recognition in the landscape; b. reduce glare and reflectivity. AO77.4 All structures and buildings are setback behind the main building line and a minimum of 10m from side and rear boundaries, except where in the Industry and Extractive industry zones, the minimum side and rear setback is 3m. Where there is no established building line the facility is located at the rear of the site. AO77.5 The facility is enclosed by security fencing or by other means to ensure public access is prohibited. AO77.6 A minimum 3m wide strip of dense planting is provided around the perimeter of the fenced area, between the facility and street frontage and adjoining uses. Note - Landscaping is provided in accordance with Planning scheme policy - Integrated design.
P078	A078

Lawful access is maintained to the site at all times that		
does not alter the amenity of the landscape or surrounding uses.	An Access and Landscape Plan demonstrates how 24 hour vehicular access will be obtained and maintained to the facility in a manner that is appropriate to the site's context.	
P079	A079	
All activities associated with the development occur within an environment incorporating sufficient controls to ensure the facility generates no audible sound at the site boundaries where in a residential setting.	All equipment comprising the Telecommunications facility ⁽⁸¹⁾ which produces audible or non-audible sound is housed within a fully enclosed building incorporating sound control measures sufficient to ensure no noise from this equipment can be heard, or felt at the site boundary.	
Values and cor	straints criteria	
Note - The relevant values and constraints criteria do not apply where the development is consistent with a current Development permit for Reconfiguring a lot or Material change of use or Operational work, where that approval has considered and addressed (e.g. through a development footprint plan (or similar in the case of Landslide hazard) or conditions of approval) the identified value or constraint under this planning scheme.		
Acid sulfate soils - (refer Overlay map - Acid sulfate soils to determine if the following assessment criteria apply) Note - Planning scheme policy - Acid sulfate soils provides guidance for self-assessable development that has the potential to disturb acid sulfate soils i.e. development involving filling or excavation works below the thresholds of 100m ³ and 500m ³ respectively.		
P080	A080	
 PO80 Development avoids disturbing acid sulfate soils. Where development disturbs acid sulfate soils, development: a. is managed to avoid or minimise the release of surface or groundwater flows containing acid and metal contaminants into the environment; b. protects the environmental and ecological values and health of receiving waters; c. protects buildings and infrastructure from the effects of acid sulfate soils. 	 AO80 Development does not involve: a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD. 	
 Development avoids disturbing acid sulfate soils. Environmental areas (refer Overlay map - Environme criteria apply) Note - The following are exempt from the native clearing provisions of a. Clearing of native vegetation located within an approved develor. b. Clearing of native vegetation reasonably necessary to remove of to infrastructure; d. Clearing of native vegetation reasonably necessary to construct	 Development does not involve: a. excavation or otherwise removing of more than 100m³ of soil or sediment where below than 5m Australian Height datum AHD; or b. filling of land of more than 500m³ of material with an average depth of 0.5m or greater where below the 5m Australian Height datum AHD. 	

	f.	Clearing of native vegetation in accordance with a bushfire ma and accepted by Council;	nagement plan prepared by a suitably qualified person, submitted to
	g.	Clearing of native vegetation associated with removal of recog land, windbreaks, lawns or created gardens;	nised weed species, maintaining existing open pastures and cropping
	h.	Grazing of native pasture by stock;	
	i. Native forest practice where exempt under Part 1, 1.7.7 Exempt development.		
	Note - Definition for native vegetation is located in Schedule 1 Definitions.		
	Note - Native vegetation subject to this criteria primarily comprises of matters of national environmental significance (MNES), matters of state environmental significance (MSES). They also comprise some matters of local environmental significance (MLES). A MLES is defined in Schedule 1.2, Administrative definitions. A list of the elements that apply to the mapped MSES and MLES is provided in Appendix 1 of the Planning scheme policy - Environmental areas. Editors' Note - The accuracy of overlay mapping can be challenged through the development application process (code assessable		
	develo	opment) or by way of a planning scheme amendment. See Court	ncil's website for details.
	Editor	s' Note - When clearing native vegetation within a MSES area,	you may still require approval from the State government.

	and or	opment provides for safe, unimpeded, convenient ngoing wildlife movement and establishes and ains habitat connectivity by:	
	a. r	etaining habitat trees;	

 b. providing contiguous patches of habitat; c. provide replacement and rehabilitation planting to improve connectivity; d. avoiding the creation of fragmented and isolated patches of habitat; e. providing wildlife movement infrastructure. Editor's note - Wildlife movement infrastructure may include refuge poles, tree boulevarding, 'stepping stone' vegetation plantings, tunnels, appropriate wildlife fencing; culverts with ledges, underpasses, overpasses, land bridges and rope bridges. Further information is provided in Planning scheme policy – Environmental areas. 	
Vegetation clearing and habitat protection	
PO83	No acceptable outcome provided.
Development ensures that the biodiversity quality and integrity of habitats is not adversely impacted upon but maintained and protected.	C Jers
PO84	No acceptable outcome provided.
 Development does not result in the net loss or degradation of habitat value in a High Value Area or a Value Offset Area. Where development does result in the loss or degradation of habitat value, development will: a. rehabilitate, revegetate, restore and enhance an area to ensure it continues to function as a viable and healthy habitat area; b. provide replacement fauna nesting boxes in the event of habitat tree loss in accordance with Planning scheme policy - Environmental areas; c. undertake rehabilitation, revegetation and restoration in accordance with the South East Queensland Ecological Restoration Framework. 	schern
P085	No acceptable outcome provided.
Development ensures safe, unimpeded, convenient and ongoing wildlife movement and habitat connectivity by:	
 a. providing contiguous patches of habitat; b. avoiding the creation of fragmented and isolated patches of habitat; c. providing wildlife movement infrastructure; d. providing replacement and rehabilitation planting to improve connectivity. 	
Vegetation clearing and soil resource stability	
PO86	No acceptable outcome provided.
Development does not:	

a. result in soil erosion or land degradation;b. leave cleared land exposed for an unreasonable period of time but is rehabilitated in a timely manner.	
Vegetation clearing and water quality	
PO87	No acceptable outcome provided.
Development maintains or improves the quality of groundwater and surface water within, and downstream, of a site by: a. ensuring an effective vegetated buffers and	
 a. anothing an onocircle vegetated bandle duration and setbacks from waterbodies is retained to achieve natural filtration and reduce sediment loads; b. avoiding or minimising changes to landforms to maintain hydrological water flows; c. adopting suitable measures to exclude livestock from entering a waterbody where a site is being used for animal husbandry⁽⁴⁾ and animal keeping⁽⁵⁾ activities. 	ersion -
PO88	No acceptable outcome provided.
 Development minimises adverse impacts of stormwater run-off on water quality by: a. minimising flow velocity to reduce erosion; b. minimising hard surface areas; c. maximising the use of permeable surfaces; d. incorporating sediment retention devices; e. minimising channelled flow. 	scheme
Vegetation clearing and access, edge effects and urb	an heat island effects
PO89 Development retains safe and convenient public access in a manner that does not result in the adverse edge effects or the loss or degradation of biodiversity values within the environment.	No acceptable outcomes provided.
 PO90 Development minimises potential adverse 'edge effects' on ecological values by: a. providing dense planting buffers of native vegetation between a development and environmental areas; b. retaining patches of native vegetation of greatest possible size where located between a development and environmental areas; c. restoring, rehabilitating and increasing the size of existing patches of native vegetation; d. ensuring that buildings and access (public and vehicle) are setback as far as possible from environmental areas and corridors; e. landscaping with native plants of local origin. 	No acceptable outcome provided.

Editor's note - Edge effects are factors of development that go to detrimentally affecting the composition and density of natural populations at the fringe of natural areas. Factors include weed invasion, pets, public and vehicle access, nutrient loads, noise and light pollution, increased fire frequency and changes in the groundwater and surface water flow.		
 PO91 Development avoids adverse microclimate change and does not result in increased urban heat island effects. Adverse urban heat island effects are minimised by: a. pervious surfaces; b. providing deeply planted vegetation buffers and green linkage opportunities; c. landscaping with local native plant species to achieve well-shaded urban places; d. increasing the service extent of the urban forest canopy. 	No acceptable outcome provided.	
Vegetation clearing and Matters of Local Environment	ntal Significance (MLES) environmental offsets	
by a suitably qualified person verifying the proposed development is in Note - To assist in demonstrating achievement of this performance ou accordance with Planning scheme policy – Heritage and landscape c adopted in accordance with AS 4970-2009 Protection of trees on dev	e outcomes, a Cultural heritage impact assessment report is prepared in accordance with The Australia ICOMOS Burra Charter. Itcome, a Tree assessment report is prepared by a qualified arborist in haracter. The Tree assessment report will also detail the measures	
landscape character and listed in Schedule 1 of Planning scheme policy - Heritage and landscape character. Places also having cultural heritage significance at a State level and being entered in the Queensland Heritage Register, are also identified in Schedule 1 of Planning scheme policy - Heritage and landscape character.		
PO93	AO93	
 Development will: a. not diminish or cause irreversible damage to the cultural heritage values present on the site, and associated with a heritage site, object or building; 	Development is for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value.	

 object or building; c. be consistent with the form, scale and style of the heritage site, object or building; d. utilise similar materials to those existing, or where this is not reasonable or practicable, neutral materials and finishes; e. incorporate complementary elements, detailing and ornamentation to those present on the heritage site, object or building; f. retain public access where this is currently provided. 	Note - A cultural heritage conservation management plan for the preservation, maintenance, repair and restoration of a site, object or building of cultural heritage value is prepared in accordance with Planning scheme policy - Heritage and landscape character. The plan is sent to, and approved by Council prior to the commencement of any preservation, maintenance, repair and restoration works.
PO94	No acceptable outcome provided.
 Demolition and removal is only considered where: a. a report prepared by a suitably qualified conservation architect or conservation engineer demonstrates that the building is structurally unsound and is not reasonably capable of economic repair; or b. demolition is confined to the removal of outbuildings, extensions and alterations that are not part of the original structure; or c. limited demolition is performed in the course of repairs, maintenance or restoration; or d. demolition is performed following a catastrophic event which substantially destroys the building or object. 	cheme version
PO95	No acceptable outcome provided.
Where development is occurring on land adjoining a site of cultural heritage value, the development is to be sympathetic to and consistent with the cultural heritage values present on the site and not result in their values being eroded, degraded or unreasonably obscured from public view.	
PO96	AO96
Development does not adversely impact upon the health and vitality of significant trees. Where development occurs in proximity to a significant tree, construction measures and techniques as detailed in AS 4970-2009 Protection of trees on development sites are adopted to ensure a significant tree's health, wellbeing and vitality. Significant trees are only removed where they are in a poor state of health or where they pose a health and safety risk to persons or property. A Tree Assessment report prepared by a suitably qualified arborist confirming a tree's state of health is required to demonstrate achievement of this performance outcome.	 Development does: a. not result in the removal of a significant tree; b. not occur within 20m of a protected tree; c. involve pruning of a tree in accordance with Australian Standard AS 4373-2007 – Pruning of Amenity Trees.

Note - The applicable river and creek flood planning levels associated with defined flood event (DFE) within the inundation area can be obtained by requesting a flood check property report from Council.		
PO97	AO97	
Development:	No acceptable outcome provided.	
 a. minimises the risk to persons from overland flow; b. does not increase the potential for damage from overland flow either on the premises or other premises, public land, watercourses, roads or infrastructure. 		
PO98	A098	
Development:	No acceptable outcome provided.	
 a. maintains the conveyance of overland flow predominantly unimpeded through the premises for any event up to and including the 1% AEP for the fully developed upstream catchment; b. does not concentrate, intensify or divert overland flow onto an upstream, downstream or surrounding property. 	C Jers.	
Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises.	schei	
Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow.		
PO99 Development does not:	No acceptable outcome provided.	
 a. directly, indirectly or cumulatively cause any increase in overland flow velocity or level; b. increase the potential for flood damage from overland flow either on the premises or other premises, public lands, watercourses, roads or infrastructure. Note - Open concrete drains greater than 1m in width are not an acceptable outcome, nor are any other design options that may increase scouring. 		
PO100	AO100	
Development ensures that public safety and the risk to the environment are not adversely affected by a detrimental impact of overland flow on a hazardous chemical located or stored on the premises.	Development ensures that a hazardous chemical is not located or stored in an Overland flow path area. Note - Refer to the Work Health and Safety Act 2011 and associated Regulation and Guidelines, the Environmental Protection Act 1994 and the relevant building assessment provisions under the Building Act 1975 for requirements related to the manufacture and storage of hazardous substances.	

PO101	AO101
Development which is not in a Rural zone ensures that overland flow is not conveyed from a road or public open space onto a private lot.	Development which is not in a Rural zone that an overland flow paths and drainage infrastructure is provided to convey overland flow from a road or public open space area away from a private lot.
PO102	AO102.1
 Development ensures that inter-allotment drainage infrastructure, overland flow paths and open drains through private property cater for overland flows for a fully developed upstream catchment and are able to be easily maintained. Note - A report from a suitably qualified Registered Professional Engineer Queensland is required certifying that the development does not increase the potential for significant adverse impacts on an upstream, downstream or surrounding premises. Note - Reporting to be prepared in accordance with Planning scheme policy – Flood hazard, Coastal hazard and Overland flow such that an easement for drainage purposes is provided over: a. a stormwater pipe if the nominal pipe diameter exceeds 300mm; b. an overland flow path where it crosses more than one premises; c. inter-allotment drainage infrastructure. Note - Refer to Planning scheme policy - Integrated design for details and examples. Note - Stormwater Drainage easement dimensions are provided in accordance with Section 3.8.5 of QUDM. 	Development ensures that roof and allotment drainage infrastructure is provided in accordance with the following relevant level as identified in QUDM: a. Urban area – Level III; b. Rural area – Level III; c. Industrial area – Level V; d. Commercial area – Level V. AO102.2 Development ensures that inter-allotment drainage infrastructure is designed to accommodate any event up to and including the 1% AEP for the fully developed upstream catchment. No acceptable outcome provided.
Additional criteria for development for a Park ⁽⁵⁷⁾	
PO104	AO104
Development for a Park ⁽⁵⁷⁾ ensures that the design and layout responds to the nature of the overland flow affecting the premises such that:	Development for a Park ⁽⁵⁷⁾ ensures works are provided in accordance with the requirements set out in Appendix B of the Planning scheme policy - Integrated design.
a. public benefit and enjoyment is maximised;	

b. impacts on the asset life and integrity of park structures is minimised;		
c. maintenance and replacement costs are minimised.		
Riparian and wetland setbacks		
PO105 Development provides and maintains a suitable setback from waterways and wetlands that protects natural and environmental values. This is achieved by recognising and responding to the following matters: a. impact on fauna habitats; b. impact on wildlife corridors and connectivity; c. impact on stream integrity; d. impact of opportunities for revegetation and rehabilitation planting; e. edge effects.	 AO105 Development does not occur within: a. 50m from top of bank for W1 waterway and drainage line b. 30m from top of bank for W2 waterway and drainage line c. 20m from top of bank for W3 waterway and drainage line d. 100m from the edge of a Ramsar wetland, 50m from all other wetlands. Note - W1, W2 and W3 waterway and drainage lines, and wetlands are mapped on Schedule 2, Section 2.5 Overlay Maps – Riparian and wetland setbacks.
